

**KENTUCKY-AMERICAN WATER COMPANY
CASE NO. 2018-00358
ATTORNEY GENERAL'S FIRST REQUEST FOR INFORMATION**

Witness: Ann E. Bulkley

- 35.** Provide working spreadsheet copies of Ms. Bulkley's attachments and exhibits with cell formulas intact.

Response:

Please see Attachment 1 to the response to PSC 2-91 for an Excel version of Attachments AEB-1 through AEB-13.

KENTUCKY-AMERICAN WATER COMPANY
CASE NO. 2018-00358
ATTORNEY GENERAL'S FIRST REQUEST FOR INFORMATION

Witness: Ann E. Bulkley

- 36.** Provide all work papers and supporting documentation and data relied upon by Ms. Bulkley in the preparation of her Direct Testimony and attachments and exhibits.

Response:

The requested workpapers that Ms. Bulkley relied on in the preparation of her Direct Testimony and attachments are provided in KAW_R_AGDR1_NUM036_Attachment 1 through KAW_R_AGDR1_NUM036_Attachment 27. An index is provided below.

BUSINESS: American Water Works Company, Inc. is the largest investor-owned water and wastewater utility in the U.S., providing services to over 15 million people in 46 states and Canada. (Regulated presence in 16 states.) Nonregulated business assists municipalities and military bases with the maintenance and upkeep as well. Regulated operations made up 88% of 2017 revenues.

New Jersey is its largest market accounting for 25% of regulated revenues. Has 6,900 employees. The Vanguard Grp. owns 10.4% of outstanding shares; BlackRock, Inc., 7.4%; officers & directors, less than 1.0%. (3/18 Proxy). President & CEO: Susan N. Story. Chair.: George MacKenzie. Address: 1025 Laurel Oak Road, Voorhees, NJ 08043. Tel.: 856-346-8200. Internet: www.amwater.com.

ANNUAL RATES Past Past Est'd '15-'17 of change (per sh) 10 Yrs. 5 Yrs. to '21-'23

| | | | |
|-------------|-------|------|-------|
| Revenues | 3.0% | 3.5% | 4.0% |
| "Cash Flow" | 50.0% | 6.0% | 7.0% |
| Earnings | -- | 7.5% | 10.0% |
| Dividends | -- | 8.5% | 10.0% |
| Book Value | 1.0% | 4.0% | 6.0% |

American Water Works has hiked the quarterly dividend by a generous amount. Since our last report in April, the board raised the payout by \$0.04 a share to \$0.455 a share. This was at the higher end of the 7%-10% target range. The growth rate was also well above the industry average.

The method of the company's success is not a mystery. American Water has been following a simple formula for some time now. By continually purchasing smaller water districts, it can meaningfully reduce operating expenses due to economies of scale. Making this easier is the current state of the water sector in the U.S. Most districts are small and municipally run. Many local governments do not have the financial wherewithal to maintain and replace aging pipelines and waste facilities. In addition, because of the many redundancies in the water operations, American Water can really cut costs and raise operating margins.

Bottom-line prospects are good for both this year and next. The company's operating strategy (with a few exceptions mostly resulting from unusual expenses),

has enabled the utility to be more profitable than the rest of the group. This year, we expect share net to recover to \$3.30 and rise another 6% in 2019, to \$3.50.

The capital budget remains large. The utility will most likely spend \$1.7 billion annually through early next decade on improving its water assets. External debt will likely aid in funding a decent portion of the expenditures. Still, the company's balance sheet should not deteriorate much. **Certain investors may find these shares of interest.** True, the equity is only expected to keep pace with the market in the year ahead. But, that's not too bad considering the Water Utility Industry ranks among the lowest of all the groups followed by *Value Line*. Also, investors often have to forfeit a substantial amount of current income when purchasing a stock with healthy dividend growth prospects. In this case, AWK's yield is close to the industry norm. And though total return potential out to 2021-2023 is subpar, that's the case for the entire group. Thus, AWK is a viable option for those investors who must have exposure to the water sector.

BUSINESS: American States Water Co. operates as a holding company. Through its principal subsidiary, Golden State Water Co., it supplies water to 258,949 customers in 70 cities in 10 counties. Service areas include the metropolitan areas of Los Angeles and Orange Counties. The company also provides electricity to 24,274 customers in Big Bear Lake and San Bernardino Cnty. Provides water & wastewater services to U.S. military bases through its ASUS sub. Sold Chaparral City Wtr. of AZ. (6/11). Employs 758. BlackRock, Inc. owns 11.7% of out. shares; Vanguard, 9.5%; off. & dir. 1.5%. (4/18 Proxy). Chairman: Lloyd Ross. Pres. & CEO: Robert Sprowls. Inc. CA. Addr.: 630 East Foothill Blvd., San Dimas, CA 91773. Tel: 909-394-3600. Internet: www.aswater.com.

A recent ruling is hurting American States Water's utility operations. Earlier this year, California regulators made a decision on Golden States Water's petition for higher rates. Despite being granted a higher return on equity, the permitted return on rate base was lowered. This has had a more meaningful impact on the utility than was expected, and was the main reason for first-quarter results falling short of the consensus.

We are lowering our near-term earnings estimates. Management believes that the California authorities' decree will shave \$3.6 million off the top line and reduce share earnings \$0.07 this year. As a result, we have deducted \$0.10 a share from both our 2018 and 2019 earnings expectations.

Nonregulated activities should do pretty well. Through its ASUS subsidiary, American States provides water services to 11 U.S. Army bases. As more of these installations are privatized in the coming years, we think ASUS will win its fair share of competitive bids for these 50-year contracts. Responsible for 25% of first-quarter earnings, this percentage ought to rise in the future. This is good news because profitability in this segment isn't capped, as is the case in the utility sector. **The equity's dividend yield is unattractive relative to its peer group.** Investors purchase water utility stocks for the income they generate. At the recent quote, AWR is yielding less than the Value Line median. Often with issues that have strong dividend growth potential, holders are willing to accept a lower current yield. However, we are now expecting the dividend to be raised only 6% at the next board meeting (being held in early August). Also, since our last report in April, the value of AWR has increased about 10%. By comparison, the S&P 500 Index is up approximately 2%. Moreover, considering that the Federal Reserve is expected to continue raising short-term interest rates into next year, we believe one- and two-year U.S. Treasury notes may well draw greater interest from those seeking safe income. Thus, some investors may want to take profits now, as AWR is also rated to underperform the market averages in the year ahead.

Middlesex Water stock has regained some ground over the past three months. Shares of the Northeast water provider struggled in the early part of this year, but have been performing better of late. Since our April review, they are up more than 15% in value, and are trading just several points shy of their recently etched all-time high price. At this time, it appears the market is pricing in a good amount of MSEX's anticipated top- and bottom-line growth, which includes a lower corporate tax bill, as well as recently approved water rate hikes. (The latter took effect April 1st, and ought to be evident in the second quarter).

tom line. Consequently, we now look for revenues of \$135 million (down \$1 million from our prior call) and share net of \$1.50 (down \$0.05) this year.

Investments in its aging infrastructure are under way. Middlesex has kicked off its capital spending program, known as "Water For Tomorrow," with a \$52 million project along its New Jersey territory. The construction of the Western Transmission Main will supplement its existing main, which services 300,000 customers through Middlesex County. Over the next five years, the company has earmarked approximately \$300 million to the program in an effort to increase efficiency and ultimately lower costs across its water delivery systems.

QUARTERLY REVENUES (\$ mill.)

| Cal-ender | Mar.31 | Jun.30 | Sep.30 | Dec.31 | Full Year |
|-----------|-------------|-------------|-------------|-------------|------------|
| 2015 | 28.8 | 31.7 | 34.7 | 30.8 | 126.0 |
| 2016 | 30.6 | 32.7 | 37.8 | 31.8 | 132.9 |
| 2017 | 30.1 | 33.0 | 36.2 | 31.5 | 130.8 |
| 2018 | 31.2 | 34.0 | 37.5 | 32.3 | 135 |
| 2019 | 33.0 | 36.0 | 39.0 | 34.0 | 142 |

First-quarter financial results were mixed. The company generated revenues of \$31.2 million, about 4% higher than the previous-year tally, due largely to a wider Delaware customer base and increased water usage from industrial and commercial customers in New Jersey. Meantime, earnings of \$0.27 a share came in flat, year over year, as an uptick in operation and maintenance expenses (increased production costs and unforeseen weather-related expenses) kept the lid on the bot-

At the current valuation, this issue does not stand out. The recent run-up in price has eroded most of the gains we envision over the pull to next decade. Too, MSEX stock is neutrally ranked for the year ahead, and the dividend yield is only average. All told, we continue to recommend investors exercise patience and wait for a better entry point.

EARNINGS PER SHARE ^A

| Debt Due | | | | BUSINESS: The York Water Company is the oldest investor-owned regulated water utility in the United States. It has operated continuously since 1816. As of December 31, 2017, the company's average daily availability was 35.4 million gallons and its service territory had an estimated population of 198,000. Has more than 69,000 customers. Residential customers accounted for 64% of 2017 revenues; commercial and industrial (28%); other (8%). It also provides sewer billing services. Incorporated: PA. York had 102 full-time employees at 12/31/17. President/CEO: Jeffrey R. Hines. Officers/directors own 1.1% of the common stock (3/18 proxy). Address: 130 East Market Street, York, Pennsylvania 17401. Telephone: (717) 845-3601. Internet: www.yorkwater.com. | | | | | | | | | | | | | | | |
| Other | | | | York Water's first-quarter bottom line was unchanged compared to the previous-year figure. The regulated utility posted earnings of \$0.20 a share for the March period, missing our mark by \$0.02. Nevertheless, we are retaining our current-year profit forecast of \$1.05 per share, as we think a lower effective tax rate, combined with higher asset improvement deductions, should help offset rising expenses in the back half of 2018. Meantime, first-quarter revenues of \$11.6 million were fractionally above our call, though the beat was not significant enough to spur an upward revision. As we expected, the company has inquired about a rate increase. In May, York asked the Pennsylvania Public Utility Commission for more than \$6 million (annual revenues) in customer rate hikes to recover replacement costs associated with water pipeline improvements, other infrastructure upgrades, as well as personnel and operational cost increases. York hopes to recover expenses incurred since its last rate case filing in 2013, and help balance future capital investments. A time frame for the decision has not yet been established. | | | | | | | | | | | | | | | |
| Current Liab. | | | | Capital spending ought to continue through 2018 and beyond. Year to date, York Water has invested only about \$3.0 million, specifically to complete a raw water pumping station and some modest infrastructure upgrades. An additional \$20 million is likely to be spent by year's end. Going forward, we expect further infrastructure upgrades and improvements to its waste water treatment plants. This spending is necessary not only as a response to its aging pipes and delivery methods, but also to handle its expanding customer base. This equity lacks investment appeal at this juncture. Shares of York Water have been lowered two spots on our Timeliness ranking scale, to 5 (Lowest). Thus, short-term accounts should turn the page. Similarly, those with a buy-and-hold mantra should take a pass, as the shares offer limited price upside 3- to 5-years out. Lastly, as a stand-alone dividend play (2.0% current yield), we think investors can find more-attractive options elsewhere. <i>Nicholas P. Patrikis</i> July 13, 2018 | | | | | | | | | | | | | | | |

Zacks Research is Reported On:

Copyright 2018 Zacks Investment Research

At the center of everything we do is a strong commitment to independent research and sharing its profitable discoveries with investors. This dedication to giving investors a trading advantage led to the creation of our proven Zacks Rank stock-rating system. Since 1988 it has more than doubled the S&P 500 with an average gain of +25.67% per year. These returns cover a period from 1988-2018. Zacks Rank stock-rating system returns are computed monthly based on the beginning of the month and end of the month Zacks Rank stock prices plus any dividends received during that particular month. A simple, equally-weighted average return of all Zacks Rank stocks is calculated to determine the monthly return. The monthly returns are then compounded to arrive at the annual return. Only Zacks Rank stocks included in Zacks hypothetical portfolios at the beginning of each month are included in the return calculations. Zacks Ranks stocks can, and often do, change throughout the month. Certain Zacks Rank stocks for which no month-end price was available, pricing information was not collected, or for certain other reasons have been excluded from these return calculations.

Zacks Research is Reported On:

Copyright 2018 Zacks Investment Research

At the center of everything we do is a strong commitment to independent research and sharing its profitable discoveries with investors. This dedication to giving investors a trading advantage led to the creation of our proven Zacks Rank stock-rating system. Since 1988 it has more than doubled the S&P 500 with an average gain of +25.67% per year. These returns cover a period from 1988-2018. Zacks Rank stock-rating system returns are computed monthly based on the beginning of the month and end of the month Zacks Rank stock prices plus any dividends received during that particular month. A simple, equally-weighted average return of all Zacks Rank stocks is calculated to determine the monthly return. The monthly returns are then compounded to arrive at the annual return. Only Zacks Rank stocks included in Zacks hypothetical portfolios at the beginning of each month are included in the return calculations. Zacks Rank stocks can, and often do, change throughout the month. Certain Zacks Rank stocks for which no month-end price was available, pricing information was not collected, or for certain other reasons have been excluded from these return calculations.

Zacks Research is Reported On:

Copyright 2018 Zacks Investment Research

At the center of everything we do is a strong commitment to independent research and sharing its profitable discoveries with investors. This dedication to giving investors a trading advantage led to the creation of our proven Zacks Rank stock-rating system. Since 1988 it has more than doubled the S&P 500 with an average gain of +25.67% per year. These returns cover a period from 1988-2018. Zacks Rank stock-rating system returns are computed monthly based on the beginning of the month and end of the month Zacks Rank stock prices plus any dividends received during that particular month. A simple, equally-weighted average return of all Zacks Rank stocks is calculated to determine the monthly return. The monthly returns are then compounded to arrive at the annual return. Only Zacks Rank stocks included in Zacks hypothetical portfolios at the beginning of each month are included in the return calculations. Zacks Rank stocks can, and often do, change throughout the month. Certain Zacks Rank stocks for which no month-end price was available, pricing information was not collected, or for certain other reasons have been excluded from these return calculations.

CURRENT POSITION (\$MILL.)

BUSINESS: American Water Works Company, Inc. is the largest investor-owned water and wastewater utility in the U.S., providing services to over 15 million people in 46 states and Canada. (Regulated presence in 16 states.) Nonregulated business assists municipalities and military bases with the maintenance and upkeep as well. Regulated operations made up 88% of 2017 revenues.

American Water Works has hiked the quarterly dividend by a generous amount. Since our last report in April, the board raised the payout by \$0.04 a share to \$0.455 a share. This was at the higher end of the 7%-10% target range. The growth rate was also well above the industry average.

The method of the company's success is not a mystery. American Water has been following a simple formula for some time now. By continually purchasing smaller water districts, it can meaningfully reduce operating expenses due to economies of scale. Making this easier is the current state of the water sector in the U.S. Most districts are small and municipally run. Many local governments do not have the financial wherewithal to maintain and replace aging pipelines and waste facilities. In addition, because of the many redundancies in the water operations, American Water can really cut costs and raise operating margins.

Bottom-line prospects are good for both this year and next. The company's operating strategy (with a few exceptions mostly resulting from unusual expenses),

has enabled the utility to be more profitable than the rest of the group. This year, we expect share net to recover to \$3.30 and rise another 6% in 2019, to \$3.50.

The capital budget remains large. The utility will most likely spend \$1.7 billion annually through early next decade on improving its water assets. External debt will likely aid in funding a decent portion of the expenditures. Still, the company's balance sheet should not deteriorate much. **Certain investors may find these shares of interest.** True, the equity is only expected to keep pace with the market in the year ahead. But, that's not too bad considering the Water Utility Industry ranks among the lowest of all the groups followed by *Value Line*. Also, investors often have to forfeit a substantial amount of current income when purchasing a stock with healthy dividend growth prospects. In this case, AWK's yield is close to the industry norm. And though total return potential out to 2021-2023 is subpar, that's the case for the entire group. Thus, AWK is a viable option for those investors who must have exposure to the water sector.

A recent ruling is hurting American States Water's utility operations. Earlier this year, California regulators made a decision on Golden States Water's petition for higher rates. Despite being granted a higher return on equity, the permitted return on rate base was lowered. This has had a more meaningful impact on the utility than was expected, and was the main reason for first-quarter results falling short of the consensus.

We are lowering our near-term earnings estimates. Management believes that the California authorities' decree will shave \$3.6 million off the top line and reduce share earnings \$0.07 this year. As a result, we have deducted \$0.10 a share from both our 2018 and 2019 earnings expectations.

Nonregulated activities should do pretty well. Through its ASUS subsidiary, American States provides water services to 11 U.S. Army bases. As more of these installations are privatized in the coming years, we think ASUS will win its fair share of competitive bids for these 50-year contracts. Responsible for 25% of first-quarter earnings, this percentage ought to

rise in the future. This is good news because profitability in this segment isn't capped, as is the case in the utility sector. **The equity's dividend yield is unattractive relative to its peer group.** Investors purchase water utility stocks for the income they generate. At the recent quote, AWR is yielding less than the Value Line median. Often with issues that have strong dividend growth potential, holders are willing to accept a lower current yield. However, we are now expecting the dividend to be raised only 6% at the next board meeting (being held in early August). Also, since our last report in April, the value of AWR has increased about 10%. By comparison, the S&P 500 Index is up approximately 2%. Moreover, considering that the Federal Reserve is expected to continue raising short-term interest rates into next year, we believe one- and two-year U.S. Treasury notes may well draw greater interest from those seeking safe income. Thus, some investors may want to take profits now, as AWR is also rated to underperform the market averages in the year ahead.

California Water Service Group's profits should rebound in the second quarter. The regulated and nonregulated water provider posted a net loss of \$0.05 in the March interim. Several factors, including higher wages and benefit costs, general operating expenses (water production), as well as an unforeseen water main break in the San Francisco area weighed on results. Nevertheless, we expect that earnings recovered nicely in the recently ended second quarter, to \$0.42 a share. That said, the miss has spurred us to shave a dime from our current-year bottom-line estimate, to \$1.45 a share.

Revenues are still on track to rise. Indeed, recent rate increases for customers and recoverable production costs played a role in the first quarter's 8% year-over-year advance. This was able to offset a \$1.2 million revenue reduction associated with cost of capital adjustment. On balance, our call for modest top-line improvement in this year and next remains unaltered.

The company made an attempt to acquire SJW Group. Subsequent to the merger announcement of SJW Group and

Connecticut Water, CWT stepped in with an unsolicited all-cash tender offer for the former, worth \$68.25 a share. However, the bid was immediately rejected, despite the lofty premium at the time of the proposal. Connecticut Water's go-shop period has come to an end, and both sides have reiterated their desires for a deal, thus shutting the door on California's efforts. Looking forward, we do not think there is any acquisition activity on the horizon.

But abundant capital investments are likely on tap over the long haul. California ought to stick to its plan to heavily invest in its aging infrastructure. Old water mains and pipes, as well as inefficient treatment plants, need to be brought up to speed. This should help reduce operating costs and prevent future uninsured losses from water main breaks.

This equity lacks investment appeal at this juncture. CWT shares are pegged to underperform the year-ahead broader market (Timeliness: 4). Moreover, total return potential over the three- to five-year stretch is nothing to write home about at the recent quotation.

| Accts Payable 12.3 | | <p>BUSINESS: Middlesex Water Company engages in the ownership and operation of regulated water utility systems in New Jersey, Delaware, and Pennsylvania. It also operates water and wastewater systems under contract on behalf of municipal and private clients in NJ and DE. Its Middlesex System provides water services to 61,000 retail customers, primarily in Middlesex County, New Jersey. In 2017, the Middlesex System accounted for 58% of operating revenues. At 12/31/17, the company had 315 employees. Incorporated: NJ. President, CEO, and Chairman: Dennis W. Doll. Officers & directors own 3.5% of the common stock; BlackRock Institutional Trust Co., 6.4% (4/18 proxy). Add.: 1500 Ronson Road, Iselin, NJ 08830. Tel.: 732-634-1500. Internet: www.middlesexwater.com.</p> | | | | | | | | | | | | | | | | | | | |

Middlesex Water stock has regained some ground over the past three months. Shares of the Northeast water provider struggled in the early part of this year, but have been performing better of late. Since our April review, they are up more than 15% in value, and are trading just several points shy of their recently etched all-time high price. At this time, it appears the market is pricing in a good amount of MSEX's anticipated top- and bottom-line growth, which includes a lower corporate tax bill, as well as recently approved water rate hikes. (The latter took effect April 1st, and ought to be evident in the second quarter).

First-quarter financial results were mixed. The company generated revenues of \$31.2 million, about 4% higher than the previous-year tally, due largely to a wider Delaware customer base and increased water usage from industrial and commercial customers in New Jersey. Meantime, earnings of \$0.27 a share came in flat, year over year, as an uptick in operation and maintenance expenses (increased production costs and unforeseen weather-related expenses) kept the lid on the bot-

| Debt Due | | | | BUSINESS: The York Water Company is the oldest investor-owned regulated water utility in the United States. It has operated continuously since 1816. As of December 31, 2017, the company's average daily availability was 35.4 million gallons and its service territory had an estimated population of 198,000. Has more than 69,000 customers. Residential customers accounted for 64% of 2017 revenues; commercial and industrial (28%); other (8%). It also provides sewer billing services. Incorporated: PA. York had 102 full-time employees at 12/31/17. President/CEO: Jeffrey R. Hines. Officers/directors own 1.1% of the common stock (3/18 proxy). Address: 130 East Market Street, York, Pennsylvania 17401. Telephone: (717) 845-3601. Internet: www.yorkwater.com. | | | | | | | | | | | | | | | |
| Other | | | | York Water's first-quarter bottom line was unchanged compared to the previous-year figure. The regulated utility posted earnings of \$0.20 a share for the March period, missing our mark by \$0.02. Nevertheless, we are retaining our current-year profit forecast of \$1.05 per share, as we think a lower effective tax rate, combined with higher asset improvement deductions, should help offset rising expenses in the back half of 2018. Meantime, first-quarter revenues of \$11.6 million were fractionally above our call, though the beat was not significant enough to spur an upward revision. As we expected, the company has inquired about a rate increase. In May, York asked the Pennsylvania Public Utility Commission for more than \$6 million (annual revenues) in customer rate hikes to recover replacement costs associated with water pipeline improvements, other infrastructure upgrades, as well as personnel and operational cost increases. York hopes to recover expenses incurred since its last rate case filing in 2013, and help balance future capital investments. A time frame for the decision has not yet been established. | | | | | | | | | | | | | | | |
| Current Liab. | | | | Capital spending ought to continue through 2018 and beyond. Year to date, York Water has invested only about \$3.0 million, specifically to complete a raw water pumping station and some modest infrastructure upgrades. An additional \$20 million is likely to be spent by year's end. Going forward, we expect further infrastructure upgrades and improvements to its waste water treatment plants. This spending is necessary not only as a response to its aging pipes and delivery methods, but also to handle its expanding customer base. This equity lacks investment appeal at this juncture. Shares of York Water have been lowered two spots on our Timeliness ranking scale, to 5 (Lowest). Thus, short-term accounts should turn the page. Similarly, those with a buy-and-hold mantra should take a pass, as the shares offer limited price upside 3- to 5-years out. Lastly, as a stand-alone dividend play (2.0% current yield), we think investors can find more-attractive options elsewhere. <i>Nicholas P. Patrikis July 13, 2018</i> | | | | | | | | | | | | | | | |

BUSINESS: Atmos Energy Corporation is engaged primarily in the distribution and sale of natural gas to over three million customers through six regulated natural gas utility operations: Louisiana Division, West Texas Division, Mid-Tex Division, Mississippi Division, Colorado-Kansas Division, and Kentucky/Mid-States Division. Gas sales breakdown for fiscal 2017: 65%, residential; 28%, commercial; 5%, industrial; and 2% other. The company sold Atmos Energy Marketing, 1/17. Officers and directors own approximately 1.4% of common stock (12/17 Proxy). President and Chief Executive Officer: Michael E. Haefner, Inc. Texas. Address: Three Lincoln Centre, Suite 1800, 5430 LBJ Freeway, Dallas, Texas 75240. Telephone: 972-934-9227. Internet: www.atmosenergy.com.

Atmos Energy is about to close the books on a solid fiscal 2018. (Years end September 30th.) Through the first nine months, earnings per share advanced around 10%, to \$3.61, compared to the year-earlier tally of \$3.27. That was brought about partly by the natural gas distribution division, which benefited from increased rates in the Texas, Mississippi, and Kentucky/Mid-States units. (During the period, it completed 16 rate-case proceedings, resulting in a \$10.8 million rise in annual operating income, and other ratemaking efforts were in progress seeking nearly \$36 million of annual operating income.) Too, the natural gas distribution segment enjoyed higher net consumption, due mainly to weather that was 36% cooler than the first nine months of fiscal 2017. Meanwhile, results of the pipeline & storage business received a lift in revenues from the Atmos Pipeline-Texas rate case and the Gas Reliability Infrastructure Program filings approved last December and May. Since we think there will be no unpleasant surprises during the fourth quarter, the Dallas-based company's bottom line stands to climb roughly 10%, to

\$3.95 a share, for the whole year. Assuming that business trends cooperate, fiscal 2019 share net might well grow another 6% or so, to \$4.20. **It now appears that capital expenditures for the fiscal year will fall around \$1.4 billion.** (Management's initial guidance was between \$1.3 billion and \$1.4 billion.) This would be some 23% higher than the previous year's figure. Similar to fiscal 2017, a considerable portion of the resources, derived primarily from operating cash flows, is being utilized to enhance the safety and reliability of the natural gas distribution and transmission systems. **These shares have been riding high lately.** We believe the price action can be traced, to some degree, to Atmos' good profits in the soon-to-conclude fiscal year. Consider, also, the current dividend and possibility of additional steady hikes in the payout (which is well covered). Other pluses are the top Safety rank, lower-than-market Beta coefficient, and high grade for Price Stability. But the stock is a Below Average (4) choice for Timeliness. *Frederick L. Harris, III August 31, 2018*

| Debt Due 183.2 | | | | BUSINESS: New Jersey Resources Corp. is a holding company providing retail/wholesale energy svcs. to customers in NJ, and in states from the Gulf Coast to New England, and Canada. New Jersey Natural Gas had 529,810 cust. at 9/30/17 in Monmouth and Ocean and other N.J. counties. Fiscal 2017 volume: 297 bill. cu. ft. (19% interruptible, 21% res., commercial & elec. utility, 60% incen- | | | | | | | | | | | | | | | | | | | |
| Other 118.6 | | | | tive programs). N.J. Natural Energy subsidiary provides unregulated retail/wholesale natural gas and related energy svcs. 2017 dep. rate: 2.7%. Has 1,052 empl. Off/dir. own 1.5% of common; BlackRock, 13.0%; Vanguard, 8.9% (12/17 Proxy). Chrmn., CEO & Pres.: Laurence M. Downes. Inc.: NJ Addr.: 1415 Wyckoff Road, Wall, NJ 07719. Tel.: 732-938-1480. Web: www.njresources.com. | | | | | | | | | | | | | | | | | | | |
| Current Liab. 571.6 | | | | Since our June review, shares of New Jersey Resources have continued to climb higher. Indeed, over that interim, the stock's price has advanced approximately 7%. Meanwhile, the company posted mixed June-period financial results. On the upside, the top line rose almost 19%, to \$543.4 million. This largely reflected commodity fluctuations, which resulted in a more than 30% rise in non utility volumes, to \$438.9 million. Alternatively, revenue contributions from the utility segment fell roughly 14%, to \$104.5 million. On the profitability front, total expenses rose 10.8% as a percentage of the top line, due to more costly nonutility gas purchases and rising operating & maintenance expenses. On balance, the uptick in costs far outweighed the top line growth, and these factors equated to a sharp drop in the bottom line, which fell markedly into negative territory, to a loss of \$0.09 a share. This was well below our call for earnings of \$0.15. However, a better-than-expected first half may well keep NJR on track for healthy overall gains this year. | | | | | | | | | | | | | | | | | | | |
| Fix. Chg. Cov. 669% | | | | At this time, we have left our 2018 bottom-line estimate unchanged at \$2.65 a share. New Jersey Resources appears poised to register a revenue advance of more than 25% this year, to \$2.85 billion. This ought to largely stem from volume gains at the nonutility business, coupled with new customer accounts at the New Jersey Natural Gas (NJNG) regulated utility operations. NJNG added 6,936 new customer meters during the first nine months of this year. What's more, the company anticipates adding 27,000-29,000 additional accounts from 2018-2020. In sum, NJR's share net is on pace to grow more than 50% this year, which falls in line with management's recently released guidance range of \$2.60-\$2.70 a share. These top-quality shares have a dividend yield that is low for a utility. They are ranked 3 (Average) for Timeliness. Additionally, the equity offers unexciting 3- to 5-year capital gains potential. Indeed, NJR's steadily rising quotation places it inside our Target Price Range. | | | | | | | | | | | | | | | | | | | |

BUSINESS: Northwest Natural Gas Co. distributes natural gas to 1000 communities, 735,000 customers, in Oregon (89% of customers) and in southwest Washington state. Principal cities served: Portland and Eugene, OR; Vancouver, WA. Service area population: 3.7 mill. (77% in OR). Company buys gas supply from Canadian and U.S. producers; has transportation rights on Northwest

Pipeline system. Owns local underground storage. Rev. breakdown: residential, 38%; commercial, 22%; industrial, gas transportation, 40%. Employs 1,146. BlackRock Inc. owns 13.1% of shares; officers and directors, 1.2% (4/18 proxy). CEO: David H. Anderson, Inc.: Oregon. Address: 220 NW 2nd Ave., Portland, OR 97209. Tel.: 503-226-4211. Int.: www.nwnatural.com.

Northwest Natural Gas had a worse-than-expected second-quarter performance. Revenues fell to \$124.6 million, hurt by warmer weather. Margins on natural gas increased and interest expense was reduced, but higher maintenance expense was incurred during the quarter. These factors caused a net loss of \$0.01 per share. Still, the company will probably have improved results over the coming quarters, as its Mist storage facility will likely come on line in December, should current schedules hold. This ought to allow for no-notice service to Portland General Electric, boosting revenues. This project cost around \$130 million, and included the development of a new pipeline and reservoir. Meantime, recent acquisitions will help improve income going forward. In all, we think the company will earn \$2.25 per share in 2018.

contingent consideration. This deal is expected to close in the first half of 2019. Overall, we like the deal, as it improves the corporate finances, considering NWN has made several other purchases. Too, it allows for some risk-free upside should contingent metrics be hit, and will allow for less volatile operations.

The expansion into water utilities in the Pacific Northwest should drive long-term growth. The company has reached deals to purchase four water utilities, and is awaiting approvals from state regulatory bodies. This ought to boost top-line expansion, while allowing earnings to grow. Meantime, we think that some back-office synergies will be achieved. Overall, we think Northwest Natural Gas will earn \$2.45 per share in 2019, and \$3.50 by the 2021-2023 period.

The company reached a deal to divest its stake in the Gill Ranch Storage facility. Under the terms of the deal, SENA Holdings would pay \$25 million for NWN's 75% interest in the natural gas storage operations in Fresno, CA. In addition, it could pay up to \$26.5 million in

Shares of Northwest Natural Gas are ranked Lowest for Timeliness (5). Too, they are trading near the high end of our long-term Target Price Range, and the dividend yield does not stand out for a utility. As such, most of the good news appears to be priced into the stock already.

The shares of ONE Gas, Inc. began trading "regular-way" on the New York Stock Exchange on February 3, 2014. That happened as a result of the separation of ONEOK's natural gas distribution operation. Regarding the details of the spinoff, on January 31, 2014, ONEOK distributed one share of OGS common stock for every four shares of ONEOK common stock held by ONEOK shareholders of record as of the close of business on January 21. It should be mentioned that ONEOK did not retain any ownership interest in the new company.

BUSINESS: ONE Gas, Inc. provides natural gas distribution services to over two million customers. It has three divisions: Oklahoma Natural Gas, Kansas Gas Service, and Texas Gas Service. The company purchased 137 Bcf of natural gas supply in 2017, compared to 134 Bcf in 2016. Total volumes delivered by customer (fiscal 2017): transportation, 61%; residential, 29%; commercial & industrial, 9%; wholesale & public authority, 1%. BlackRock owns approximately 10.9% of common stock; The Vanguard Group, 9.3%; T. Rowe Price Associates, 8.7%; officers and directors, less than 1% (4/18 Proxy). CEO: Pierce H. Norton II. Incorporated: Oklahoma. Address: 15 East Fifth Street, Tulsa, Oklahoma 74103. Telephone: 918-947-7000. Internet: www.onegas.com.

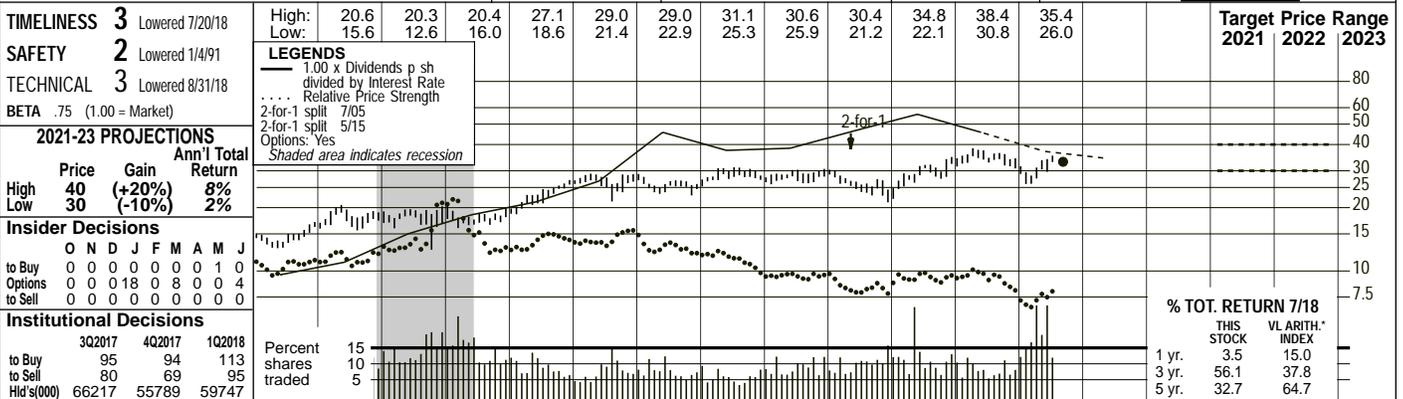

It's been a good year thus far for ONE Gas. In fact, through the first half, earnings per share jumped 22%, to \$2.11, relative to 2017's tally of \$1.73. That was brought about largely by a decrease in income tax expense, thanks to new legislation. Furthermore, there was the benefit of new rates in Texas and Kansas. Other positives included higher transportation volumes and net customer growth in Oklahoma and Texas. Meanwhile, total operating expenses increased only 2.8%. Right now, we look for the company's full-year profits to advance some 11%, to \$3.35 per share. Concerning 2019, share net of \$3.55 (a 6% rise) appears plausible, assuming, of course, that the business climate helps. **This year's capital expenditures are now expected to lie between \$375 million and \$390 million.** (That would be around 7% higher than the 2017 level.) Some 70% of the budget is dedicated to system integrity and pipeline replacement projects. Corporate finances seem very sufficient to make those initiatives possible. It's worth mentioning that leadership looks for that figure to range between \$375 million and \$415 million annually over the

2019-2022 span, with about the same percentage of funds distributed to the manner in which capital is currently deployed. **The energy firm has a presence in only three states.** And we think management is content with keeping the status quo, given that some operations are in metropolitan areas, like Tulsa, Oklahoma; Wichita, Kansas; and Austin, Texas. But this lack of geographic diversification leaves the company somewhat more susceptible to regional economic downturns and regulations. **These shares have climbed nearly 20% in price during the past six months.** ONE Gas' healthy earnings are a big factor behind that move. The equity also continues to hold worthwhile long-term capital gains possibilities. Other positives are the dividend (and the likelihood of future steady hikes in the well-covered payout), below-market Beta, plus an Above Average (2) Safety rank. So, we suggest that investors desiring decent risk-adjusted total return potential consider OGS stock. **But for now, the Timeliness rank sits at just 3 (Average).**

| Current Liab. | | | | <p>Shares of South Jersey Industries has traded in a narrow range in recent months. The company reported mixed results for the second quarter. The top line declined moderately, on a year-over-year basis. But adjusted earnings per share of \$0.07 surpassed the prior-year tally. Strong bottom-line performance at the Midstream and Energy Services businesses more than offset unfavorable results at South Jersey Gas and the Energy Group lines.</p> | | | | | | | | | | | | | | | | |
| Fix. Chg. Cov. | | | | <p>The company has completed the acquisitions of Elizabethtown Gas and Elkton Gas from a subsidiary of Southern Company Gas. The transactions closed in early July. South Jersey is now the second-largest natural gas provider in New Jersey, with service to over 681,000 customers. The transactions add 3,315 miles of natural gas pipeline to the company's portfolio of regulated assets. The board of directors has approved the creation of SJI Utilities, a holding company that will house South Jersey Gas, Elizabethtown Gas, and Elkton Gas. The company has also announced the sale of solar assets; the proceeds ought to bolster its financial position. South Jersey has undertaken a strategic review of its noncore, nonregulated operations. These moves reflect the company's intention to emphasize high-quality, regulated earnings growth and increase earnings stability.</p> | | | | | | | | | | | | | | | | |

BUSINESS: Spire Inc., formerly known as the Laclede Group, Inc., is a holding company for natural gas utilities, which distributes natural gas across Missouri, including the cities of St. Louis and Kansas City. Has roughly 1.7 million customers. Acquired Missouri Gas 9/13, Alabama Gas Co 9/14. Utility terms sold and transported in fiscal 2017: 3.0 bill. Revenue mix for regulated operations: residential, 29%; commercial and industrial, 15%; transportation, 49%; other, 6%. Has around 3,279 employees. Officers and directors own 3.0% of common shares (1/18 proxy). Chairman: Edward Glotzbach; CEO: Suzanne Sitherwood, Inc.: Missouri. Address: 700 Market Street, St. Louis, Missouri 63101. Telephone: 314-342-0500. Internet: www.thelacledegroup.com.

ANNUAL RATES Past 10 Yrs. Past 5 Yrs. Est'd '15-'17 to '13-'17

| | | | |
|-------------------|-------|--------|------|
| Revenues (per sh) | -8.0% | -10.5% | 6.0% |
| "Cash Flow" | 6.0% | 7.0% | 4.5% |
| Earnings | 4.0% | 4.0% | 7.5% |
| Dividends | 3.5% | 4.0% | 4.0% |
| Book Value | 7.5% | 9.0% | 3.5% |

Spire Inc. recorded a decent fiscal third-quarter performance (ended June 30th). Revenues expanded 8% year over year to \$350.6 million, aided by greater natural gas throughput. In addition, good cost controls, along with a reduced U.S. tax rate, helped income grow to \$0.52 per share. Still, the quarterly result was held back somewhat by a higher share count. The company appears to be on track for an unimposing fiscal fourth quarter, but new meter growth expanded 5.7% year over year. Due to warmer temperatures and greater maintenance activities, a loss is normally incurred in the fourth quarter. In all, we think the company will earn \$4.50 per share in fiscal 2018.

Long-term results ought to benefit from a few factors. Stronger operations should occur across its utility segment, as higher volumes boost winter-month earnings. Still, some of this will be offset by new rates, which were reduced largely to offset U.S. tax reform. In addition, Spire purchased a second storage facility in Wyoming and will look to combine operations into a single unit, lowering costs and achieving synergies. Meantime, the company will benefit from good results in its marketing segment, as better prices occur. Still, gains due to tax reform will not likely be recurring, causing earnings to fall to \$4.00 per share in 2019, before rebounding to the \$5.00 mark over the long haul.

QUARTERLY REVENUES (\$ mill.)^A

| Fiscal Year Ends | Dec.31 | Mar.31 | Jun.30 | Sep.30 | Full Fiscal Year |
|------------------|------------|------------|------------|--------------|------------------|
| 2015 | 619.6 | 877.4 | 275.2 | 204.2 | 1976.4 |
| 2016 | 399.4 | 609.3 | 249.3 | 279.3 | 1537.3 |

| 2019 | 600 | 900 | 400 | 500 | 2400 |

EARNINGS PER SHARE ^{A B F}

| Fiscal Year Ends | Dec.31 | Mar.31 | Jun.30 | Sep.30 | Full Fiscal Year |
|------------------|-------------|-------------|------------|-------------|------------------|
| 2015 | 1.09 | 2.18 | .32 | d.43 | 3.16 |
| 2016 | 1.08 | 2.31 | .24 | d.31 | 3.24 |
| 2017 | .99 | 2.36 | .45 | d.28 | 3.43 |
| 2018 | 2.39 | 2.03 | .52 | d.44 | 4.50 |
| 2019 | 1.30 | 2.50 | .50 | d.40 | 4.00 |

The Spire STL Pipeline received FERC approval in August. The approval allows for land acquisition and preconstruction activities to take place. In addition, the pipeline is expected to be placed into service by late 2019 and cost between \$210 million and \$225 million. The 65-mile project will reduce transportation costs of natural gas across the coverage area, and will have higher allowable rates of return, boosting earnings.

Spire shares do not stand out for Timeliness. They also offer below-average long-term total return potential. The dividend yield is only average for a utility, but will likely grow at a decent rate over the coming years. The company's good financial position and Above Average (2) rank for Safety suggest that accounts with lower risk tolerances and an income objective may find these shares appealing.

Zacks Research is Reported On:

Copyright 2018 Zacks Investment Research

At the center of everything we do is a strong commitment to independent research and sharing its profitable discoveries with investors. This dedication to giving investors a trading advantage led to the creation of our proven Zacks Rank stock-rating system. Since 1988 it has more than doubled the S&P 500 with an average gain of +25.67% per year. These returns cover a period from 1988-2018. Zacks Rank stock-rating system returns are computed monthly based on the beginning of the month and end of the month Zacks Rank stock prices plus any dividends received during that particular month. A simple, equally-weighted average return of all Zacks Rank stocks is calculated to determine the monthly return. The monthly returns are then compounded to arrive at the annual return. Only Zacks Rank stocks included in Zacks hypothetical portfolios at the beginning of each month are included in the return calculations. Zacks Ranks stocks can, and often do, change throughout the month. Certain Zacks Rank stocks for which no month-end price was available, pricing information was not collected, or for certain other reasons have been excluded from these return calculations.

Zacks Research is Reported On:

Copyright 2018 Zacks Investment Research

At the center of everything we do is a strong commitment to independent research and sharing its profitable discoveries with investors. This dedication to giving investors a trading advantage led to the creation of our proven Zacks Rank stock-rating system. Since 1988 it has more than doubled the S&P 500 with an average gain of +25.67% per year. These returns cover a period from 1988-2018. Zacks Rank stock-rating system returns are computed monthly based on the beginning of the month and end of the month Zacks Rank stock prices plus any dividends received during that particular month. A simple, equally-weighted average return of all Zacks Rank stocks is calculated to determine the monthly return. The monthly returns are then compounded to arrive at the annual return. Only Zacks Rank stocks included in Zacks hypothetical portfolios at the beginning of each month are included in the return calculations. Zacks Rank stocks can, and often do, change throughout the month. Certain Zacks Rank stocks for which no month-end price was available, pricing information was not collected, or for certain other reasons have been excluded from these return calculations.

Zacks Research is Reported On:

Copyright 2018 Zacks Investment Research

At the center of everything we do is a strong commitment to independent research and sharing its profitable discoveries with investors. This dedication to giving investors a trading advantage led to the creation of our proven Zacks Rank stock-rating system. Since 1988 it has more than doubled the S&P 500 with an average gain of +25.67% per year. These returns cover a period from 1988-2018. Zacks Rank stock-rating system returns are computed monthly based on the beginning of the month and end of the month Zacks Rank stock prices plus any dividends received during that particular month. A simple, equally-weighted average return of all Zacks Rank stocks is calculated to determine the monthly return. The monthly returns are then compounded to arrive at the annual return. Only Zacks Rank stocks included in Zacks hypothetical portfolios at the beginning of each month are included in the return calculations. Zacks Rank stocks can, and often do, change throughout the month. Certain Zacks Rank stocks for which no month-end price was available, pricing information was not collected, or for certain other reasons have been excluded from these return calculations.

Copyright 2018 Zacks Investment Research

At the center of everything we do is a strong commitment to independent research and sharing its profitable discoveries with investors. This dedication to giving investors a trading advantage led to the creation of our proven Zacks Rank stock-rating system. Since 1988 it has more than doubled the S&P 500 with an average gain of +25.67% per year. These returns cover a period from 1988-2018. Zacks Rank stock-rating system returns are computed monthly based on the beginning of the month and end of the month Zacks Rank stock prices plus any dividends received during that particular month. A simple, equally-weighted average return of all Zacks Rank stocks is calculated to determine the monthly return. The monthly returns are then compounded to arrive at the annual return. Only Zacks Rank stocks included in Zacks hypothetical portfolios at the beginning of each month are included in the return calculations. Zacks Ranks stocks can, and often do, change throughout the month. Certain Zacks Rank stocks for which no month-end price was available, pricing information was not collected, or for certain other reasons have been excluded from these return calculations.

Zacks Research is Reported On:

Copyright 2018 Zacks Investment Research

At the center of everything we do is a strong commitment to independent research and sharing its profitable discoveries with investors. This dedication to giving investors a trading advantage led to the creation of our proven Zacks Rank stock-rating system. Since 1988 it has more than doubled the S&P 500 with an average gain of +25.67% per year. These returns cover a period from 1988-2018. Zacks Rank stock-rating system returns are computed monthly based on the beginning of the month and end of the month Zacks Rank stock prices plus any dividends received during that particular month. A simple, equally-weighted average return of all Zacks Rank stocks is calculated to determine the monthly return. The monthly returns are then compounded to arrive at the annual return. Only Zacks Rank stocks included in Zacks hypothetical portfolios at the beginning of each month are included in the return calculations. Zacks Rank stocks can, and often do, change throughout the month. Certain Zacks Rank stocks for which no month-end price was available, pricing information was not collected, or for certain other reasons have been excluded from these return calculations.

PART I**Item 1. Business**

This annual report on Form 10-K is a combined report being filed by two separate Registrants, American States Water Company (“AWR”) and Golden State Water Company (“GSWC”). References in this report to “Registrant” are to AWR and GSWC, collectively, unless otherwise specified. GSWC makes no representations as to the information contained in this report relating to AWR and its subsidiaries, other than GSWC.

AWR makes its periodic reports, Form 10-Q and Form 10-K, and current reports, Form 8-K, available free of charge through its website, www.aswater.com, as soon as material is electronically filed with or furnished to the Securities and Exchange Commission (“SEC”). Such reports are also available on the SEC’s website at www.sec.gov. AWR also makes available free of charge its code of business conduct and ethics, its corporate governance guidelines and the charters of its Nominating and Governance Committee, Compensation Committee, and Audit and Finance Committee through its website or by calling (877) 463-6297. AWR and GSWC have filed the certification of officers required by Section 302 of the Sarbanes-Oxley Act as Exhibits 31.1 and 31.2 to its Form 10-K for the year ended December 31, 2017.

Overview

AWR is the parent company of GSWC and American States Utility Services, Inc. (“ASUS”) (and its wholly owned subsidiaries: Fort Bliss Water Services Company (“FBWS”), Terrapin Utility Services, Inc. (“TUS”), Old Dominion Utility Services, Inc. (“ODUS”), Palmetto State Utility Services, Inc. (“PSUS”), Old North Utility Services, Inc. (“ONUS”), Emerald Coast Utility Services, Inc. (“ECUS”) and Fort Riley Utility Services, Inc. (“FRUS”). AWR was incorporated as a California corporation in 1998 as a holding company. AWR has three reportable segments: water, electric and contracted services. Within the segments, AWR has two principal business units, water and electric service utility operations, conducted through GSWC, and contracted services conducted through ASUS and its subsidiaries. FBWS, TUS, ODUS, PSUS, ONUS, ECUS and FRUS may be referred to herein collectively as the “Military Utility Privatization Subsidiaries.”

GSWC is a public utility engaged principally in the purchase, production, distribution and sale of water in 10 counties in the State of California. GSWC is regulated by the California Public Utilities Commission (“CPUC”). It was incorporated as a California corporation on December 31, 1929. GSWC also distributes electricity in several San Bernardino County mountain communities in California through its Bear Valley Electric Service (“BVES”) division.

GSWC served 258,949 water customers and 24,274 electric customers at December 31, 2017, or a total of 283,223 customers, compared with 261,002 water customers and 23,940 electric customers at December 31, 2016, or a total of 284,942 customers. GSWC’s operations exhibit seasonal trends. Although GSWC’s water utility operations have a diversified customer base, residential and commercial customers account for the majority of GSWC’s water sales and revenues. Revenues derived from commercial and residential water customers accounted for approximately 90% of total water revenues for the years ended December 31, 2017, 2016 and 2015.

ASUS, itself or through the Military Utility Privatization Subsidiaries, has contracted with the U.S. government to provide water and/or wastewater services at various military installations. ASUS operates, maintains and performs construction activities (including renewal and replacement capital work) on water and/or wastewater systems at various U.S. military bases pursuant to 50-year firm, fixed-price contracts. Each of the contracts with the U.S. government is subject to termination, in whole or in part, prior to the end of its 50-year term for convenience of the U.S. government or as a result of default or nonperformance by the subsidiary performing the contract. The contract price for each of these contracts is subject to annual economic price adjustments. Contracts are also subject to modifications for changes in circumstances, changes in laws and regulations and additions to the contract value for new construction of facilities at the military bases. AWR guarantees performance of ASUS’s military privatization contracts.

[Table of Contents](#)

Pursuant to the terms of these contracts, the Military Utility Privatization Subsidiaries operate the following water and wastewater systems:

| Subsidiary | Military Base | Type of System | Location |
|------------|--|----------------------|--|
| FBWS | Fort Bliss | Water and Wastewater | Near El Paso, Texas and extending into southeastern New Mexico |
| TUS | Joint Base Andrews | Water and Wastewater | Maryland |
| ODUS | Fort Lee | Wastewater | Virginia |
| ODUS | Joint-Base Langley Eustis and Joint Expeditionary Base Little Creek-Fort Story | Water and Wastewater | Virginia |
| PSUS | Fort Jackson | Water and Wastewater | South Carolina |
| ONUS | Fort Bragg, Pope Army Airfield and Camp Mackall | Water and Wastewater | North Carolina |
| ECUS | Eglin Air Force Base | Water and Wastewater | Florida |
| FRUS | Fort Riley* | Water and Wastewater | Kansas |

*ASUS is expected to begin operations at Fort Riley in 2018 pursuant to a contract awarded in September 2017.

Certain financial information for each of AWR's business segments - water distribution, electric distribution, and contracted services - is set forth in Note 15 to the Notes to Consolidated Financial Statements of American States Water Company and its subsidiaries. AWR's water and electric utility segments are not dependent upon a single or only a few customers. The U.S. government is the primary customer for ASUS's contracted services. ASUS, from time to time, performs work at military bases for other prime contractors of the U.S. government.

A large portion of the revenue from AWR's segments is seasonal. The impact of seasonality on these AWR businesses is discussed in more detail in Item 1A. "Risk Factors."

Environmental matters and compliance with such laws and regulations are discussed in detail in Item 7. "Management's Discussion and Analysis of Financial Condition and Results of Operation" under the section titled "Environmental Matters."

Competition

The businesses of GSWC are substantially free from direct and indirect competition with other public utilities, municipalities and other public agencies within their existing service territories. However, GSWC may be subject to eminent domain proceedings in which governmental agencies, under state law, may acquire GSWC's water systems if doing so is necessary and in the public's interest. GSWC competes with governmental agencies and other investor-owned utilities in connection with offering service to new real estate developments on the basis of financial terms, availability of water and ability to commence providing service on a timely basis. ASUS actively competes for business with other investor-owned utilities, other third-party providers of water and/or wastewater services and governmental entities primarily on the basis of quality of service and price.

AWR Workforce

AWR and its subsidiaries had a total of 758 employees as of January 31, 2018. GSWC had 549 employees as of January 31, 2018. Fifteen employees of BVES are covered by a collective bargaining agreement with the International Brotherhood of Electrical Workers, which expires in December 2020.

ASUS had 209 employees as of January 31, 2018. Fifteen of FBWS's employees are covered by a collective bargaining agreement with the International Union of Operating Engineers. This agreement expires in September 2020.

Forward-Looking Information

This Form 10-K and the documents incorporated herein contain forward-looking statements intended to qualify for the “safe harbor” from liability established by the Private Securities Litigation Reform Act of 1995. Forward-looking statements are based on current estimates, expectations and projections about future events and assumptions regarding these events and include statements regarding management’s goals, beliefs, plans or current expectations, taking into account the information currently available to management. Forward-looking statements are not statements of historical facts. For example, when we use words such as “anticipate,” “believe,” “plan,” “estimate,” “expect,” “intend,” “may” and other words that convey uncertainty of future events or outcomes, we are making forward-looking statements. We are not able to predict all the factors that may affect future results. We caution you that any forward-looking statements made by us are not guarantees of future performance and the actual results may differ materially from those in our forward-looking statements. Some of the factors that could cause future results to differ materially from those expressed or implied by our forward-looking statements or from historical results, include, but are not limited to:

- the outcome of pending and future regulatory, legislative or other proceedings, investigations or audits, including decisions in GSWC's general rate cases and the results of independent audits of GSWC's construction contracting procurement practices or other independent audits of our costs;
- changes in the policies and procedures of the CPUC;
- timeliness of CPUC action on GSWC rates;
- availability of GSWC's water supplies, which may be adversely affected by drought, changes in weather patterns, contamination, and court decisions or other governmental actions restricting the use of water from the Colorado River, the California State Water Project, and/or pumping of groundwater;
- wildfires in our electric division's service territory, as well as court decisions and regulatory actions that may affect our ability to recover the costs associated with such events or the defense or payment of resulting claims;
- our ability to efficiently manage GSWC capital expenditures and operating and maintenance expenses within CPUC authorized levels and timely recover our costs through rates;
- the impact of opposition to GSWC rate increases on our ability to recover our costs through rates, including costs associated with construction of pipelines to connect to alternative sources of water, new wells to replace wells that are no longer in service (or are otherwise inadequate to meet the needs of GSWC's customers), and other facilities to conserve or reclaim water;
- the impact of opposition by GSWC customers to rate increases associated with tiered rate structures as well as potential future restrictions on water use mandated in California, which decreases adopted usage and increases customer rates;
- the impact of condemnation actions on future GSWC revenues and other aspects of our business if we do not receive adequate compensation for the assets taken, or recovery of all charges associated with the condemnation of such assets, and the impact on future revenues if we are no longer entitled to any portion of the revenues generated from such assets;
- liabilities of GSWC associated with the inherent risks of damage to private property and injuries to employees and the public if our or their property should come into contact with electrical current or equipment, including through downed power lines or equipment malfunctions if safe construction and maintenance work sites are not maintained;
- our ability to forecast the costs of maintaining GSWC’s aging water and electric infrastructure;
- our ability to recover increases in permitting costs and costs associated with negotiating and complying with the terms of our franchise agreements with cities and counties and other demands made upon us by the cities and counties in which GSWC operates;
- changes in accounting valuations and estimates, including changes resulting from our assessment of anticipated recovery of GSWC's regulatory assets, settlement of liabilities and revenues subject to refund or regulatory disallowances and the timing of such recovery, and the amounts set aside for uncollectible accounts receivable,

[Table of Contents](#)

inventory obsolescence, pensions and post-retirement liabilities, taxes and uninsured losses and claims, including general liability and workers' compensation claims;

- changes in environmental laws, health and safety laws and water and recycled water quality requirements and increases in costs associated with complying with these laws and requirements, including costs associated with GSWC's upgrading and building new water treatment plants, GSWC's disposing of residuals from our water treatment plants, handling and storing hazardous chemicals, compliance monitoring activities and GSWC's securing alternative water supplies when necessary;
- our ability to obtain adequate, reliable and cost-effective supplies of chemicals, electricity, fuel, water and other raw materials that are needed for our water and wastewater operations;
- our ability to attract, retain, train, motivate, develop and transition key employees;
- our ability to recover the costs associated with any contamination of GSWC's groundwater supplies from parties responsible for the contamination or through the ratemaking process, and the time and expense incurred by us in obtaining recovery of such costs;
- the breakdown or failure of equipment at GSWC's electric division that can cause fires and unplanned electric outages, and whether GSWC will be subject to investigations, penalties, liabilities to customers or other third parties or other costs in connection with such events;
- adequacy of our electric division's power supplies and the extent to which we can manage and respond to the volatility of electricity and natural gas prices;
- our electric division's ability to comply with the CPUC's renewable energy procurement requirements;
- changes in GSWC long-term customer demand due to changes in customer usage patterns as a result of conservation efforts, regulatory changes affecting demand such as mandatory restrictions on water use, new landscaping or irrigation requirements, recycling of water by customers or purchase of recycled water supplied by other parties, unanticipated population growth or decline, changes in climate conditions, general economic and financial market conditions and cost increases, which may impact our long-term operating revenues if we are unable to secure rate increases in an amount sufficient to offset reduced demand;
- changes in accounting treatment for regulated utilities;
- effects of changes in or interpretations of tax laws, rates or policies;
- changes in estimates used in ASUS's cost-to-cost method for revenue recognition of certain construction activities;
- termination, in whole or in part, of one or more of our military utility privatization contracts to provide water and/or wastewater services at military bases for the convenience of the U.S. government or for default;
- suspension or debarment for a period of time from contracting with the government due to violations of laws or regulations in connection with military utility privatization activities;
- delays by the U.S. government in making timely payments to ASUS for water and/or wastewater services or construction activities at military bases because of fiscal uncertainties over the funding of the U.S. government or otherwise;
- delays in obtaining economic price or equitable adjustments to our prices on one or more of our contracts to provide water and/or wastewater services at military bases;
- disallowance of costs on any of our contracts to provide water and/or wastewater services at military bases because of audits, cost reviews or investigations by contracting agencies;
- inaccurate assumptions used in preparing bids in our contracted services business;

[Table of Contents](#)

- failure of the wastewater systems that we operate on military bases resulting in untreated wastewater or contaminants spilling into nearby properties, streams or rivers;
- failure to comply with the terms of our military privatization contracts;
- failure of any of our subcontractors to perform services for us in accordance with the terms of our military privatization contracts;
- competition for new military privatization contracts;
- issues with the implementation, maintenance or upgrading of our information technology systems;
- general economic conditions which may impact our ability to recover infrastructure investments and operating costs from customers;
- explosions, fires, accidents, mechanical breakdowns, the disruption of information technology and telecommunication systems, human error and similar events that may occur while operating and maintaining water and electric systems in California or operating and maintaining water and wastewater systems on military bases under varying geographic conditions;
- the impact of storms, earthquakes, floods, mudslides, drought, wildfires, disease and similar natural disasters, or acts of terrorism or vandalism, that affect customer demand, that damage or disrupt facilities, operations or information technology systems owned by us, our customers or third parties on whom we rely or that damage the property of our customers or other third parties or cause bodily injury resulting in liabilities that we may be unable to recover from insurance or other third parties or that the CPUC or the courts do not permit us to recover from ratepayers;
- potential costs, lost revenues, or other consequences resulting from misappropriation of assets or sensitive information, corruption of data, or operational disruption due to a cyber-attack or other cyber incident;
- increases in the cost of obtaining insurance or in uninsured losses that may not be recovered in rates, or under our contracts with the U.S. government, including increases due to difficulties in obtaining insurance for certain risks, such as wildfires and earthquakes in California;
- restrictive covenants in our debt instruments or changes to our credit ratings on current or future debt that may increase our financing costs or affect our ability to borrow or make payments on our debt; and
- our ability to access capital markets and other sources of credit in a timely manner on acceptable terms.

Please consider our forward-looking statements in light of these risks as you read this Form 10-K. We qualify all of our forward-looking statements by these cautionary statements.

[Table of Contents](#)**Item 1A. Risk Factors**

You should carefully read the risks described below and other information in this Form 10-K in order to understand certain of the risks of our business.

Our business is heavily regulated and, as a result, decisions by regulatory agencies and changes in laws and regulations can significantly affect our business

GSWC's revenues depend substantially on the rates and fees it charges its customers and the ability to recover its costs on a timely basis, including the ability to recover the costs of purchased water, groundwater assessments, electricity, natural gas, chemicals, water treatment, security at water facilities and preventative maintenance and emergency repairs. Any delays by the CPUC in granting rate relief to cover increased operating and capital costs at our public utilities or delays in obtaining approval of our requests at ASUS for economic price or equitable adjustments for contracted services from the U.S. government may adversely affect our financial performance. We may file for interim rates in California in situations where there may be delays in granting final rate relief during a general rate case proceeding. If the CPUC approves lower rates, the CPUC will require us to refund to customers the difference between the interim rates and the rates approved by the CPUC. Similarly, if the CPUC approves rates that are higher than the interim rates, the CPUC may authorize us to recover the difference between the interim rates and the final rates.

Regulatory decisions affecting GSWC may also impact prospective revenues and earnings, affect the timing of the recognition of revenues and expenses, may overturn past decisions used in determining our revenues and expenses and could result in impairment charges and customer refunds. Management continually evaluates the anticipated recovery of regulatory assets, settlement of liabilities and revenues subject to refund and provides for allowances and reserves as deemed necessary. In the event that our assessment of the probability of recovery or settlement through the ratemaking process is incorrect, we will adjust the associated regulatory asset or liability to reflect the change in our assessment or any regulatory disallowances. A change in our evaluation of the probability of recovery of regulatory assets or a regulatory disallowance of all or a portion of our costs could have a material adverse effect on our financial results.

We are also, in some cases, required to estimate future expenses and, in others, we are required to incur the expense before recovering costs. As a result, our revenues and earnings may fluctuate depending on the accuracy of our estimates, the timing of our investments or expenses or other factors. If expenses increase significantly over a short period of time, we may experience delays in recovery of these expenses, the inability to recover carrying costs for these expenses and increased risks of regulatory disallowances or write-offs.

Regulatory agencies may also change their rules and policies which may adversely affect our profitability and cash flows. Changes in policies of the U.S. government may also adversely affect one or more of our Military Utility Privatization Subsidiaries. In certain circumstances, the U.S. government may be unwilling or unable to appropriate funds to pay costs mandated by changes in rules and policies of federal or state regulatory agencies. The U.S. government may disagree with the increases that we request and may delay approval of requests for equitable adjustment or economic price adjustments which could adversely affect our anticipated rates of return.

We may also be subject to fines or penalties if a regulatory agency, including the U.S. government, determines that we have failed to comply with laws, regulations or orders applicable to our businesses, unless we successfully appeal such an adverse determination. Regulatory agencies may also disallow certain costs if audit findings determine that we have failed to comply with our policies and procedures for procurement or other practices.

Our costs involved in maintaining water quality and complying with environmental regulation have increased and are expected to continue to increase

Our capital and operating costs at GSWC can increase substantially as a result of increases in environmental regulation arising from increases in the cost of upgrading and building new water treatment plants, disposing of residuals from our water treatment plants, compliance-monitoring activities and securing alternative supplies when necessary. GSWC may be able to recover these costs through the ratemaking process. We may also be able to recover these costs under settlement and contractual arrangements.

We may be subject to financial losses, penalties and other liabilities if we fail to maintain safe work sites, equipment or facilities

Our safety record is critical to our reputation. We maintain health and safety standards to protect our employees, customers, vendors and the public. Although we are vigilant in adhering to such health and safety standards, it is unlikely that we will be able to avoid accidents or other events resulting in damage to property or the public at all times.

Our business sites, including construction and maintenance sites, often put our employees and others in close proximity with large pieces of equipment, moving vehicles, pressurized water, chemicals and other regulated materials. On many sites we are responsible for safety and, accordingly, must implement safety procedures. If we fail to implement such procedures or if the procedures we implement are ineffective or are not followed by our employees or others, our employees and others may be injured or die. Unsafe work sites also have the potential to increase our operating costs. Any of the foregoing could result in financial losses, which could have a material adverse impact on our business, financial condition, and results of operations.

Our operations may involve the handling and storage of hazardous chemicals which, if improperly handled, stored or disposed of, could subject us to penalties or other liabilities. We are also subject to regulations dealing with occupational health and safety. Although we maintain functional employee groups whose primary purpose is to ensure that we implement effective health, safety, and environmental work procedures throughout our organization, including construction sites and maintenance sites, a failure to comply with such regulations could subject us to liability.

Electrical facilities also have an inherent risk of damage to persons or property should such persons or property come into contact with such facilities which could, depending upon the circumstances, subject us to penalties and damages.

We may sustain losses that exceed or are excluded from our insurance coverage or for which we are not insured

We are, from time to time, parties to legal or regulatory proceedings. These proceedings may pertain to regulatory investigations, employment matters or other disputes. Management periodically reviews its assessment of the probable outcome of these proceedings, the costs and expenses reasonably expected to be incurred, and the availability and extent of insurance coverage. On the basis of this review, management establishes reserves for such matters. We may, however, from time to time be required to pay fines, penalties or damages that exceed our insurance coverage and/or reserves if our estimate of the probable outcome of such proceedings proves to be inaccurate.

We maintain insurance coverage as part of our overall legal and risk management strategy to minimize our potential liabilities. However, our insurance policies contain exclusions and other limitations that may not cover our potential liabilities. Generally, our insurance policies cover property, workers' compensation, employer liability, general liability and automobile liability. Each policy includes deductibles or self-insured retentions and policy limits for covered claims. As a result, we may sustain losses that exceed or that are excluded from our insurance coverage or for which we are not insured.

We have experienced increased costs and difficulties in obtaining insurance coverage for wildfires that could impact or potentially arise from BVES's ordinary operations. Uninsured losses and increases in the cost of insurance may not be recoverable in customer rates. A loss which is not insured or not fully insured or cannot be recovered in customer rates could materially affect GSWC's financial condition and results of operations.

Additional Risks Associated with our Public Utility Operations***Our operating costs may increase as a result of groundwater contamination***

Our operations can be impacted by groundwater contamination in certain service territories. Historically, we have taken a number of steps to address contamination, including the removal of wells from service, decreasing the amount of groundwater pumped from wells in order to facilitate remediation of plumes of contaminated water, constructing water treatment facilities and securing alternative sources of supply from other areas not affected by the contamination. In emergency situations, we have supplied our customers with bottled water until the emergency situation has been resolved.

Our ability to recover these types of costs depends upon a variety of factors, including approval of rate increases, the willingness of potentially responsible parties to settle litigation and otherwise address the contamination and the extent and magnitude of the contamination. We may recover costs from certain third parties that may be responsible, or potentially responsible, for groundwater contamination. However, we often experience delays in obtaining recovery of these costs and incur additional costs associated with seeking recovery from responsible or potentially responsible parties which may adversely impact our liquidity. In some events we may be unable to recover all of these costs from third parties due to the inability to

[Table of Contents](#)

identify the potentially responsible parties, the lack of financial resources of responsible parties or the high litigation costs associated with obtaining recovery from responsible or potentially responsible parties.

We can give no assurance regarding the adequacy of any such recovery to offset the costs associated with contamination or the cost of recovery of any legal costs. To date, the CPUC has permitted us to establish memorandum accounts for potential recovery of these types of costs when they arise.

Management believes that rate recovery, proper insurance coverage and reserves are in place to appropriately manage these types of contamination issues. However, such issues, if ultimately resolved unfavorably to us, could, in the aggregate, have a material adverse effect on our results of operations and financial condition.

The adequacy of our water supplies depends upon weather and a variety of other uncontrollable factors

The adequacy of our water supplies varies from year to year depending upon a variety of factors, including:

- rainfall, basin replenishment, flood control, snow pack levels in California and the West, reservoir levels and availability of reservoir storage;
- availability of Colorado River water and imported water from the State Water Project;
- the amount of usable water stored in reservoirs and groundwater basins;
- the amount of water used by our customers and others;
- water quality;
- legal limitations on production, diversion, storage, conveyance and use; and
- climate change.

More frequent and extended California drought conditions and changes in weather patterns and population growth in California cause increased stress on surface water supplies and groundwater basins. In addition, low or no allocations of water from the State Water Project and court-ordered pumping restrictions on water obtained from the Sacramento-San Joaquin Delta decrease or eliminate the amount of water that the Metropolitan Water District of Southern California ("MWD") and other state water contractors are able to import from northern California.

We have implemented tiered rates and other practices, as appropriate, in order to encourage water conservation. We have also implemented programs to assist customers in complying with water usage reductions. Over the long term, we are acting to secure additional supplies from desalination and increase use of reclaimed water, where appropriate and feasible. We cannot predict the extent to which these efforts to reduce stress on our water supplies will be successful or sustainable, or the extent to which these efforts will enable us to continue to satisfy all of the water needs of our customers. Water shortages at GSWC may:

- adversely affect our supply mix, for instance, by causing increased reliance upon more expensive water sources;
- adversely affect our operating costs, for instance, by increasing the cost of producing water from more highly contaminated aquifers or requiring us to transport water over longer distances, truck water to water systems or adopt other emergency measures to enable us to continue to provide water service to our customers;
- result in an increase in our capital expenditures over the long term, for example, by requiring future construction of pipelines to connect to alternative sources of supply, new wells to replace those that are no longer in service or are otherwise inadequate to meet the needs of our customers, and other facilities to conserve or reclaim water;
- adversely affect the volume of water sold as a result of such factors as mandatory or voluntary conservation efforts by customers, changes in customer conservation patterns, recycling of water by customers and imposition of new regulations impacting such things as landscaping and irrigation patterns;
- adversely affect aesthetic water quality if we are unable to flush our water systems as frequently due to water shortages or drought restrictions; and
- result in customer dissatisfaction and harm to our reputation if water service is reduced, interrupted or otherwise adversely affected as a result of drought, water contamination or other causes.

Our liquidity may be adversely affected by changes in water supply costs

We obtain our water supplies for GSWC from a variety of sources, which vary among our water systems. Certain systems obtain all of their supply from water that is pumped from aquifers within our service areas; some systems purchase all of the supply from wholesale suppliers; some systems obtain the supply from treating surface water sources; and other systems obtain the supply from a combination of wells, surface water sources and/or wholesale suppliers. The cost of obtaining these supplies varies, and overall costs can be impacted as use within a system varies from time to time. As a result, our cost of providing, distributing and treating water for our customers' use can vary significantly.

Furthermore, imported water wholesalers, such as MWD, may not always have an adequate supply of water to sell to us. Wholesale water suppliers may increase their prices for water delivered to us based on factors that affect their operating costs. Purchased water rate increases are beyond our control.

GSWC has implemented a modified supply cost balancing account ("MCBA") to track and recover costs from supply mix changes and rate changes by wholesale suppliers, as authorized by the CPUC. However, cash flows from operations can be significantly affected since much of the balance we recognize in the MCBA is collected from or refunded to customers primarily through surcharges or surcredits, respectively, generally over twelve- to eighteen-month periods.

Our liquidity and earnings may be adversely affected by maintenance costs

Some of our infrastructure in California is aging. We have experienced leaks and mechanical problems in some of these older systems. In addition, well and pump maintenance expenses are affected by labor and material costs and more stringent environmental regulations. These costs can increase substantially and unexpectedly.

We include estimated increases in maintenance costs for future years in each general rate case filed by GSWC for possible recovery.

Our liquidity and earnings may be adversely affected by our conservation efforts

Our water utility business is heavily dependent upon revenue generated from rates charged to our customers based on the volume of water used. The rates we charge for water are regulated by the CPUC and may not be adequately adjusted to reflect changes in demand. Declining usage also negatively impacts our long-term operating revenues if we are unable to secure rate increases or if growth in the customer base does not occur to the extent necessary to offset per-customer usage decline.

Conservation by all customer classes at GSWC is a top priority. However, customer conservation will result in lower volumes of water sold. We may experience a decline in per-customer water usage due to factors such as:

- conservation efforts to reduce costs;
- drought conditions resulting in additional water conservation;
- the use of more efficient household fixtures and appliances by consumers to save water;
- voluntary or mandatory changes in landscaping and irrigation patterns;
- recycling of water by our customers; and
- regulation of groundwater rights.

These types of changes may result in permanent decreases in demand even if our water supplies are sufficient to meet higher levels of demand after a drought ends. In addition, governmental restrictions on water usage during drought conditions may result in a decreased demand for water, even if our sources of supply are sufficient to serve our customers during such drought conditions.

We implemented a CPUC-approved water-revenue adjustment mechanism ("WRAM") at GSWC, which has the effect of reducing the adverse impact of our customers' conservation efforts on revenues. However, cash flows from operations can be significantly affected since much of the balance we recognize in the WRAM account is collected from or refunded to customers generally over twelve-, eighteen- or thirty-six-month periods.

Our earnings may be affected by weather during different seasons

The demand for water and electricity varies by season. For instance, there can be a higher level of water consumption during the third quarter of each year when weather in California tends to be hot and dry. During unusually wet weather, our customers generally use less water. The CPUC-approved WRAM helps mitigate fluctuations in revenues due to changes in water consumption by our customers in California.

The demand for electricity in our electric customer service area is greatly affected by winter snow levels. An increase in winter snow levels reduces the use of snowmaking machines at ski resorts in the Big Bear area and, as a result, reduces our electric revenues. Likewise, unseasonably warm weather during a skiing season may result in temperatures too high for snowmaking conditions, which also reduces our electric revenues. GSWC has implemented a CPUC-approved base-revenue-requirement adjustment mechanism for our electric business which helps mitigate fluctuations in the revenues of our electric business due to changes in the amount of electricity used by GSWC's electric customers.

Our liquidity and earnings may be adversely affected by wildfires

It is possible that wildfires in our electric service territory may occur more frequently, be of longer duration or impact larger areas as a result of drought damaged plants and trees, lower humidity or higher winds that might be occurring as result of changed weather patterns. Our liquidity, earnings and operations may be materially adversely affected by wildfires in our electric service territory. We may be required to (i) incur greater costs to relocate lines or increase our trimming of trees and other plants near our electric facilities, and (ii) bear the costs of damages to property or injuries to the public if it is determined that our power lines or other electrical equipment was a cause, in whole or in part, of such damages or injuries.

Losses by insurance companies resulting from wildfires in California may cause insurance coverage for wildfire risks to become more expensive or unavailable, under reasonable terms, and our insurance may, in any event, be inadequate to recover all our losses incurred in a wildfire. We might not be allowed to recover in our rates any increased costs of wildfire insurance, or the costs of any uninsured wildfire losses.

Our liquidity may be adversely affected by increases in electricity and natural gas prices in California

We purchase most of the electric energy sold to customers in our electric customer service area from others under purchased power contracts. In addition to purchased power contracts, we purchase additional energy from the spot market to meet peak demand and following the expiration of purchased power contracts if there are delays in obtaining CPUC authorization of new purchase power contracts. We may sell surplus power to the spot market during times of reduced energy demand. As a result, our cash flows may be affected by increases in spot market prices of electricity purchased and decreases in spot market prices for electricity sold. However, GSWC has implemented supply-cost balancing accounts, as approved by the CPUC, to mitigate fluctuations in supply costs. We also operate a natural-gas-fueled 8.4 megawatt generator in our electric service area.

Unexpected generator downtime or a failure to perform by any of the counterparties to our electric and natural gas purchase contracts could further increase our exposure to fluctuating natural gas and electricity prices.

Changes in electricity prices also affect the unrealized gains and losses on our block forward purchased power contracts that qualify as derivative instruments since we adjust the asset or liability on these contracts to reflect the fair market value of the contracts at the end of each month. The CPUC has authorized us to establish a memorandum account to track the changes in the fair market value of our purchased power contracts. As a result, unrealized gains and losses on these types of purchased power contracts do not impact earnings.

We may not be able to procure sufficient renewable energy resources to comply with CPUC rules

We are required to procure a portion of our electricity for BVES from renewable energy resources to meet the CPUC's renewable procurement requirements. We have an agreement with a third party to purchase renewable energy credits which we believe enables us to meet these requirements through 2023. In the event that the third party fails to perform in accordance with the terms of the agreement, we may not be able to obtain sufficient resources to meet the renewable procurement requirements. We may be subject to fines and penalties by the CPUC if it determines that we are not in compliance with the renewable resource procurement rules.

Our assets are subject to condemnation

Municipalities and other governmental subdivisions may, in certain circumstances, seek to acquire certain of our assets through eminent domain proceedings. It is generally our practice to contest these proceedings, which may be costly and may temporarily divert the attention of management from the operation of our business. If a municipality or other governmental subdivision succeeds in acquiring our assets, there is a risk that we will not receive adequate compensation for the assets taken or be able to recover all charges associated with the condemnation of such assets. In addition, we would no longer be entitled to any portion of revenue generated from the use of such assets.

Our costs of obtaining and complying with the terms of franchise agreements are increasing

Cities and counties in which GSWC operates have granted GSWC franchises to construct, maintain and use pipes and appurtenances in public streets and rights of way. The costs of obtaining, renewing and complying with the terms of these franchise agreements have been increasing as cities and counties attempt to regulate GSWC's operations within the boundaries of the city or unincorporated areas of the counties in which GSWC operates. Cities and counties have also been attempting to impose new fees on GSWC's operations, including pipeline abandonment fees and road-cut or other types of capital improvement fees. At the same time, there is increasing opposition from consumer groups to rate increases that may be necessary to compensate GSWC for the increased costs of regulation by local governments. These trends may adversely affect GSWC's ability to recover its costs of providing water service in rates and to efficiently manage capital expenditures and operating and maintenance expenses within CPUC authorized levels.

The generation, transmission and distribution of electricity are dangerous and involve inherent risks of damage to private property and injury to employees and the general public

Electricity is dangerous for employees and the general public should they come in contact with electrical current or equipment, including through downed power lines, sparking during high wind events or equipment malfunctions. Injuries and property damage caused by such events may subject GSWC to significant liabilities that may not be covered or fully covered by insurance. Additionally, the CPUC has delegated to its staff the authority to issue citations, which carry a fine of \$50,000 per-violation per day, to electric utilities subject to its jurisdiction for violations of safety rules found in statutes, regulations, and the General Orders of the CPUC which could also materially affect GSWC's liquidity and results of operations.

Additional Risks Associated with our Contracted Services Operations

We derive revenues from contract operations primarily from the operation and maintenance of water and/or wastewater systems at military bases and the construction of water and wastewater infrastructure on these bases (including renewal and replacement of these systems). As a result, these operations are subject to risks that are different from those of our public utility operations.

Our 50-year contracts for servicing military bases create certain risks that are different from our public utility operations

We have entered into contracts to provide water and/or wastewater services at military bases pursuant to 50-year contracts, subject to termination, in whole or in part, for the convenience of the U.S. government. In addition, the U.S. government may stop work under the terms of one or more of the contracts, delay performance of our obligations under the contracts or modify the contracts at its convenience.

Our contract pricing is based on a number of assumptions, including assumptions about prices and availability of labor, equipment and materials. We may be unable to recover all costs if any of these assumptions are inaccurate or if all costs incurred in connection with performing the work were not considered. Our contracts are also subject to annual economic price adjustments or other changes permitted by the terms of the contracts. Prices are also subject to equitable adjustment based upon changes in circumstances, laws or regulations and service-requirement changes to the extent provided in each of the contracts.

We are required to record all costs under these types of contracts as they are incurred. As a result, we may record losses associated with unanticipated conditions, higher than anticipated infrastructure levels and emergency work at the time such expenses occur. We recognize additional revenue for such work as, and to the extent that, our economic price adjustments and/or requests for equitable adjustments are approved. Delays in obtaining approval of economic price adjustments and/or equitable adjustments can negatively impact our results of operations and cash flows.

Certain payments under these contracts are subject to appropriations by Congress. We may experience delays in receiving payment or delays in price adjustments due to canceled or delayed appropriations specific to our projects or reductions in government spending for the military generally or military-base operations specifically. Appropriations and the timing of payment may be influenced by, among other things, the state of the economy, competing political priorities, budget constraints, the timing and amount of tax receipts and the overall level of government expenditures.

Management also reviews goodwill for impairment at least annually. ASUS has \$1.1 million of goodwill which may be at risk for potential impairment if requested economic price adjustments and/or equitable adjustments are not granted.

Risks associated with wastewater systems are different from those of our water distribution operations

The wastewater-collection-system operations of our subsidiaries providing wastewater services on military bases are subject to substantial regulation and involve significant environmental risks. If collection, treatment or disposal systems fail, overflow or do not operate properly, untreated wastewater or other contaminants could spill onto nearby properties or into nearby streams and rivers, causing damage to persons or property, injury to aquatic life and economic damages. The cost of addressing such damages may not be recoverable. This risk is most acute during periods of substantial rainfall or flooding, which are common causes of sewer overflows and system failures. Liabilities resulting from such damage could adversely and materially affect our business, results of operations and financial condition. In the event that we are deemed liable for any damage caused by overflows, our losses may not be recoverable under our contracts with the U.S. government or covered by insurance policies. We may also find it difficult to secure insurance for this business in the future at acceptable rates.

We may have responsibility for water quality at the military bases we serve

While it is the responsibility of the U.S. government to provide the source of water supply to meet the Military Utility Privatization Subsidiaries' water distribution system requirements under their contracts, the Military Utility Privatization Subsidiaries, as the water system permit holders for most of the bases they serve, are responsible for ensuring the continued compliance of the provided source of supply with all federal, state and local regulations. We believe, however, that the terms of the contracts between the Military Utility Privatization Subsidiaries and the U.S. government provide the opportunity for us to recover costs incurred in the treatment or remediation of any quality issue that arises from the source of water supply.

Our contracts for the construction of infrastructure improvements on military bases create risks that are different from those of our operations and maintenance activities

We have entered into contract modifications with the U.S. government and agreements with third parties for the construction of new water and/or wastewater infrastructure at the military bases on which we operate. Most of these contracts are firm fixed-price contracts. Under firm fixed-price contracts, we will benefit from cost savings, but are generally unable (except for changes in scope or circumstances approved by the U.S. government or third party) to recover any cost overruns to the approved contract price. Under most circumstances, the U.S. government or third party has approved increased-cost change orders due to changes in scope of work performed.

We generally recognize contract revenues from these types of contracts over time using input methods to measure progress towards satisfying a performance obligation. The measurement of performance over time is based on cost incurred relative to total estimated costs, or the physical completion of the construction projects. The earnings or losses recognized on individual contracts are based on periodic estimates of contract revenues, costs and profitability as these construction projects progress.

We establish prices for these types of firm fixed-price contracts and the overall 50-year contracts taken as a whole, based, in part, on cost estimates that are subject to a number of assumptions, including assumptions regarding future economic conditions. If these estimates prove inaccurate or circumstances change, cost overruns could have a material adverse effect on our contracted business operations and results of operations.

We may be adversely affected by disputes with the U.S. government regarding our performance of contracted services on military bases

We are periodically audited or reviewed by the Defense Contract Auditing Agency ("DCAA") and/or the Defense Contract Management Agency ("DCMA") for compliance with federal acquisition regulations, cost-accounting standards and other laws, regulations and standards that are not applicable to the operations of GSWC. During the course of these audits/reviews, the DCAA or DCMA may question our incurred project costs or the manner in which we have accounted for such costs and recommend to our U.S. government administrative contracting officer that such costs be disallowed.

If there is a dispute with the U.S. government regarding performance under these contracts or the amounts owed to us, the U.S. government may delay, reject or withhold payment, delay price adjustments or assert its right to offset damages against amounts owed to us. If we are unable to collect amounts owed to us on a timely basis or the U.S. government asserts its offset rights, profits and cash flows could be adversely affected.

If we fail to comply with the terms of one or more of our U.S. government contracts, other agreements with the U.S. government or U.S. government statutes and regulations, we could also be suspended or barred from future U.S. government contracts for a period of time and be subject to possible damages, fines and penalties as well as damage to our reputation in the water and wastewater industry.

We depend, to some extent, upon subcontractors to assist us in the performance of contracted services on military bases

We rely, to some extent, on subcontractors to assist us in the operation and maintenance of the water and wastewater systems at military bases. The failure of any of these subcontractors to perform services for us in accordance with the terms of our contracts with the U.S. government could result in the termination of our contract to provide water and/or wastewater services at the affected base(s), a loss of revenues or increases in costs to correct a subcontractor's performance failures.

We are also required to make a good faith effort to achieve our small business subcontracting plan goals pursuant to U.S. government regulations. If we fail to use good faith efforts to meet these goals, the U.S. government may assess damages against us at the end of the contract. The U.S. government has the right to offset claimed damages against any amounts owed to us.

We also rely on third-party manufacturers, as well as third-party subcontractors, to complete our construction projects. To the extent that we cannot engage subcontractors or acquire equipment or materials, our ability to complete a project in a timely fashion or at a profit may be impaired. If the amount of costs we incur for these projects exceeds the amount we have estimated in our bid, we could experience reduced profits or losses in the performance of these contracts. In addition, if a subcontractor or manufacturer is unable to deliver its services, equipment or materials according to the negotiated terms for any reason, including the deterioration of its financial condition, we may be required to purchase the services, equipment or materials from another source at a higher price. This may reduce the profit to be realized or result in a loss on a project for which the services, equipment or materials were needed.

If these subcontractors fail to perform services to be provided to us or fail to provide us with the proper equipment or materials, we may be penalized for their failure to perform; however, our contracts with these subcontractors include certain protective provisions, which may include the assessment of liquidated damages. We also mitigate these risks by requiring our subcontractors, as appropriate, to obtain performance bonds and to compensate us for any penalties we may be required to pay as a result of their failure to perform.

Our earnings may be affected, to some extent, by weather during different seasons

Seasonal weather conditions, such as hurricanes, heavy rainfall or significant winter storms, occasionally cause temporary office closures and/or result in temporary halts to construction activity at military bases. To the extent that our construction activities are impeded by these events, we will experience a delay in recognizing revenues from these construction projects.

We continue to incur costs associated with the expansion of our contract activities

We continue to incur additional costs in connection with the expansion of our contract operations associated with the preparation of bids for new contract operations on prospective and existing military bases. Our ability to recover these costs and to earn a profit on our contract operations will depend upon the extent to which we are successful in obtaining new contracts and recovering these costs and other costs from new contract revenues.

We face competition for new military privatization contracts

An important part of our growth strategy is the expansion of our contracted services business through new contract awards to serve additional military bases for the U.S. government. ASUS competes with other regulated utilities, municipalities, and other entities for these contracts.

Other Risks***The accuracy of our judgments and estimates about financial and accounting matters will impact our operating results and financial condition***

The quality and accuracy of estimates and judgments used have an impact on our operating results and financial condition. If our estimates are not accurate, we will be required to make an adjustment in a future period. We make certain estimates and judgments in preparing our financial statements regarding, among others:

- timing of recovering WRAM and MCBA regulatory assets;
- amounts to set aside for uncollectible accounts receivable, inventory obsolescence and uninsured losses;
- our legal exposure and the appropriate accrual for claims, including general liability and workers' compensation claims;
- future costs and assumptions for pensions and other post-retirement benefits;
- regulatory recovery of deferred items; and
- possible tax uncertainties.

Our business requires significant capital expenditures

The utility business is capital intensive. We spend significant sums of money for additions to, or replacement of, our property, plant and equipment at our water and electric utilities. We obtain funds for these capital projects from operations, contributions by developers and others and advances from developers (which are repaid over a period of time at no interest). We also periodically borrow money or issue equity for these purposes. In addition, we have a syndicated bank credit facility that is partially used for these purposes. We cannot provide assurance that these sources will continue to be adequate or that the cost of funds will remain at levels permitting us to earn a reasonable rate of return.

Our Military Utility Privatization Subsidiaries providing water and wastewater services on military bases also expect to incur significant capital expenditures. To the extent that the U.S. government does not reimburse us for these expenditures as the work is performed or completed, the U.S. government will repay us over time.

We may be adversely impacted by economic conditions

Access to external financing on reasonable terms depends, in part, on conditions in the debt and equity markets. When business and market conditions deteriorate, we may no longer have access to the capital markets on reasonable terms. Our ability to obtain funds is dependent upon our ability to access the capital markets by issuing debt or equity to third parties or obtaining funds from our revolving credit facility. In the event of financial turmoil affecting the banking system and financial markets, consolidation of the financial services industry, significant financial service institution failures or our inability to renew or replace our existing revolving credit facility on favorable terms, it may become necessary for us to seek funds from other sources on less favorable terms.

Market conditions and demographic changes may adversely impact the value of our benefit plan assets and liabilities

Market factors can affect assumptions we use in determining funding requirements with respect to our pension and other postretirement benefit plans. For example, a relatively modest change in our assumptions regarding discount rates can materially affect our calculation of funding requirements. To the extent that market data compels us to reduce the discount rate used in our assumptions, our benefit obligations could materially increase, which could adversely affect our financial position and cash flows. Further, changes in demographics, such as increases in life expectancy assumptions may also increase the funding requirements of our obligations related to the pension and other postretirement benefit plans.

Market conditions also affect the values of the assets that are held in trusts to satisfy significant future obligations under our pension and other postretirement benefit plans. These assets are subject to market fluctuations, which may cause investment returns to fall below our projected rates of return. A decline in the market value of our pension and other postretirement benefit plan assets will increase the funding requirements under these plans if future returns on these assets are insufficient to offset the decline in value. Future increases in pension and other postretirement costs as a result of the reduced value of plan assets may not be fully recoverable in rates, and our results of operations and financial position could be negatively affected. These risks are mitigated to some extent by the two-way pension balancing accounts authorized by the CPUC, which permits us to track differences between forecasted annual pension expense adopted in water and electric rates and actual pension expenses for future recovery or refund to customers.

Payment of our debt may be accelerated if we fail to comply with restrictive covenants in our debt agreements

Our failure to comply with restrictive covenants in our debt agreements could result in an event of default. If the default is not cured or waived, we may be required to repay or refinance this debt before it becomes due. Even if we are able to obtain waivers from our creditors, we may only be able to do so on unfavorable terms.

The price of our Common Shares may be volatile and may be affected by market conditions beyond our control

The trading price of our Common Shares may fluctuate in the future because of the volatility of the stock market and a variety of other factors, many of which are beyond our control. Factors that could cause fluctuations in the trading price of our Common Shares include: regulatory developments; general economic conditions and trends; price and volume fluctuations in the overall stock market from time to time; actual or anticipated changes or fluctuations in our results of operations; actual or anticipated changes in the expectations of investors or securities analysts; actual or anticipated developments in other utilities' businesses or the competitive landscape generally; litigation involving us or our industry; major catastrophic events, or sales of large blocks of our stock.

AWR is a holding company that depends on cash flow from its subsidiaries to meet its financial obligations and to pay dividends on its Common Shares

As a holding company, our subsidiaries conduct substantially all operations and our only significant assets are investments in our subsidiaries. This means that we are dependent on distributions of funds from our subsidiaries to meet our debt service obligations and to pay dividends on our Common Shares.

Our subsidiaries are separate and distinct legal entities and generally have no obligation to pay any amounts due on our credit facility. Our subsidiaries only pay dividends if and when declared by the respective subsidiary board. Moreover, GSWC is obligated to give first priority to its own capital requirements and to maintain a capital structure consistent with that determined to be reasonable by the CPUC in its most recent decision on capital structure in order that customers not be adversely affected by the holding company structure. Furthermore, our right to receive cash or other assets in the unlikely event of liquidation or reorganization of any of our subsidiaries is generally subject to the prior claims of creditors of that subsidiary. If we are unable to obtain funds from a subsidiary in a timely manner, we may be unable to meet our financial obligations, make additional investments or pay dividends.

Failure to attract, retain, train, motivate, develop and transition key employees could adversely affect our business

In order to be successful, we must attract, retain, train, motivate, and develop key employees, including those in managerial, operational, financial, business-development and information-technology support positions. Our regulated business and contracted services operations are complex. Attracting and retaining high quality staff allows us to minimize the cost of providing quality service. In order to attract and retain key employees in a competitive marketplace, we must provide a competitive compensation package and be able to effectively recruit qualified candidates. The failure to successfully hire key employees or the loss of a material number of key employees could have a significant impact on the quality of our operations in the short term. Further, changes in our management team may be disruptive to our business, and any failure to successfully transition key new hires or promoted employees could adversely affect our business and results of operations.

We must successfully maintain and/or upgrade our information technology systems as we are increasingly dependent on the continuous and reliable operation of these systems

We rely on various information technology systems to manage our operations. Such systems require periodic modifications, upgrades and/or replacement, which subject us to inherent costs and risks including potential disruption of our internal control structure, substantial capital expenditures, additional administrative and operating expenses, retention of sufficiently skilled personnel to implement and operate the new systems, and other risks and costs of delays or difficulties in transitioning to new systems or of integrating new systems into our current systems. In addition, the difficulties with implementing new technology systems may cause disruptions in our business operations and have an adverse effect on our business and operations, if not anticipated and appropriately mitigated.

We rely on our computer, information and communications technology systems in connection with the operation of our business, especially with respect to customer service and billing, accounting and the monitoring and operation of our treatment, storage and pumping facilities. Our computer and communications systems and operations could be damaged or interrupted by weather, natural disasters, telecommunications failures or acts of war or terrorism or similar events or disruptions. Any of these or other events could cause system interruption, delays and loss of critical data, or delay or prevent operations and adversely affect our financial results.

Security risks, data protection breaches and cyber-attacks could disrupt our internal operations, and any such disruption could increase our expenses, damage our reputation and adversely affect our stock price

There have been an increasing number of cyber-attacks on companies around the world, which have caused operational failures or compromised sensitive corporate or customer data. These attacks have occurred over the internet, through malware, viruses or attachments to e-mails or through persons inside the organization or with access to systems inside the organization. Although we do not believe that our systems are at a materially greater risk of cyber security attacks than other similar organizations, our information technology systems remain vulnerable to damage or interruption from:

- computer viruses;
- malware;
- hacking; and
- denial of service actions.

We have implemented security measures and will continue to devote significant resources to address any security vulnerabilities in an effort to prevent cyber-attacks. Despite our efforts, we cannot be assured that a cyber-attack will not cause water, wastewater or electric system problems, disrupt service to our customers, compromise important data or systems or

result in unintended release of customer or employee information. Moreover, if a computer security breach affects our systems or results in the unauthorized release of sensitive data, our reputation could be materially damaged. We could also be exposed to a risk of loss or litigation and possible liability. In addition, pursuant to U.S. government regulations regarding cyber-security of government contractors, we might be subject to fines, penalties or other actions, including debarment, with respect to current contracts or with respect to future contract opportunities.

Our operations are geographically concentrated in California

Although we operate water and wastewater facilities in a number of states, our water and electric operations are concentrated in California, particularly Southern California. As a result, our financial results are largely subject to political, water supply, labor, utility cost and regulatory risks, economic conditions, natural disasters and other risks affecting California.

We operate in areas subject to natural disasters

We operate in areas that are prone to earthquakes, fires, mudslides, hurricanes, tornadoes, flooding or other natural disasters. While we maintain insurance policies to help reduce our financial exposure, a significant seismic event in Southern California, where GSWC's operations are concentrated, or other natural disasters in any of the areas that we serve could adversely impact our ability to deliver water and electricity or provide wastewater service and adversely affect our costs of operations. With respect to GSWC, the CPUC has historically allowed utilities to establish a catastrophic event memorandum account to potentially recover such costs. With respect to the Military Utility Privatization Subsidiaries, costs associated with response to natural disasters have been recoverable through requests for equitable adjustment.

Our operations may be the target of terrorist activities

Terrorists could seek to disrupt service to our customers by targeting our assets. We have invested in additional security for facilities throughout our regulated service areas to mitigate the risks of terrorist activities. We also may be prevented from providing water and/or wastewater services at the military bases we serve in times of military crisis affecting these bases.

The final determination of our income tax liability may be materially different from our income tax provision

Significant judgment is required in determining our provision for income taxes. Our calculation of the provision for income taxes is subject to our interpretation of applicable tax laws in the jurisdictions in which we file. In addition, our income tax returns are subject to periodic examination by the Internal Revenue Service and other taxing authorities.

On December 22, 2017, the Tax Cuts and Jobs Act (the "Tax Act") was signed into federal law. The provisions of this major tax reform are generally effective January 1, 2018. The most significant change impacting Registrant is the reduction of the corporate federal income tax rate from 35% to 21% effective January 1, 2018. Registrant was able to make reasonable estimates in order to remeasure its deferred tax balances and account for the effects of the Tax Act, which have been reflected in the December 31, 2017 financial statements. Any further technical corrections or other forms of guidance addressing the Tax Act, as well as regulatory or governmental actions, could result in adjustments to Registrant's remeasurement and accounting for the effects of the Tax Act.

In December 2014, the Company also changed its tax method of accounting to permit the expensing of qualifying utility asset improvement costs that were previously being capitalized and depreciated for tax purposes. As a result of the change, which included a cumulative adjustment for 2013 and prior years, the Company deducted a significant amount of asset costs that consisted primarily of water mains and connections. Our determination of costs that qualify as a capital asset versus an immediate tax deduction for utility asset improvements is subject to subsequent adjustment arising from review by taxing authorities, and may impact the deductions that have been taken on recently filed income tax returns. Although we believe our income tax estimates are appropriate, there is no assurance that the final determination of our current taxes payable will not be materially different, either higher or lower, from the amounts reflected in our financial statements. In the event we are assessed additional income taxes, our financial condition and cash flows could be adversely affected.

Item 1B. Unresolved Staff Comments

None.

Item 2. Properties

Water Properties

As of December 31, 2017, GSWC's physical properties consisted of water transmission and distribution systems which included 2,783 miles of pipeline together with services, meters and fire hydrants and approximately 425 parcels of land, generally less than one acre each, on which are located wells, pumping plants, reservoirs and other water utility facilities, including four surface water treatment plants. GSWC also has franchises, easements and other rights of way for the purpose of accessing wells and tanks and constructing and using pipes and appurtenances for transmitting and distributing water. All of GSWC's properties are located in California.

As of December 31, 2017, GSWC owned 241 wells, of which 200 are active with an aggregate production capacity of approximately 212 million gallons per day. GSWC has 62 connections to the water distribution facilities of the MWD and other municipal water agencies. GSWC's storage reservoirs and tanks have an aggregate capacity of approximately 113.8 million gallons. GSWC owns no dams. The following table provides information regarding the water utility plant of GSWC:

| Pumps | | Distribution Facilities | | | Reservoirs | |
|--------------|----------------|--------------------------------|-----------------|-----------------|-------------------|------------------|
| Well | Booster | Mains* | Services | Hydrants | Tanks | Capacity* |
| 241 | 392 | 2,783 | 259,018 | 26,041 | 142 | 113.8 (1) |

* Reservoir capacity is measured in millions of gallons. Mains are in miles.

(1) GSWC has additional capacity in its Bay Point system through an exclusive capacity right to use 4.4 million gallons per day from a treatment plant owned by the Contra Costa Water District. GSWC also has additional reservoir capacity through an exclusive right to use an eight-million-gallon reservoir, one-half of another eight-million-gallon reservoir, and one-half of a treatment plant's capacity, all owned by the Three Valleys Municipal Water District, to serve the cities of Claremont and San Dimas.

Electric Properties

GSWC's electric properties are located in the Big Bear area of San Bernardino County, California. As of December 31, 2017, GSWC owned and operated approximately 87.8 miles of overhead 34.5 kilovolt (kv) transmission lines, 2.8 miles of underground 34.5 kv transmission lines, 489.2 miles of 4.16 kv or 2.4 kv distribution lines, 96.6 miles of underground cable, 13 sub-stations and a natural gas-fueled 8.4 MW peaking generation facility. GSWC also has franchises, easements and other rights of way for the purpose of constructing and using poles, wires and other appurtenances for transmitting electricity.

Adjudicated and Other Water Rights

GSWC owns groundwater and surface water rights in California. Groundwater rights are further subject to classification as either adjudicated or unadjudicated rights. Adjudicated rights have been subjected to comprehensive litigation in the courts, are typically quantified and are actively managed for optimization and sustainability of the resource. Unadjudicated rights are subject to further regulation by the State Water Resources Control Board ("SWRCB") and the California Department of Water Resources. Surface water rights are quantified and managed by the SWRCB, unless the surface water rights originated prior to 1914. As of December 31, 2017, GSWC had adjudicated groundwater rights and surface water rights of 73,611 and 11,335 acre-feet per year, respectively. GSWC also has a number of unadjudicated groundwater rights, which have not been quantified, but are typically measured by historical usage.

Office Buildings

GSWC owns its general headquarters facility in San Dimas, California. GSWC also owns and leases certain facilities throughout California that house district and customer service offices. ASUS leases office facilities in Georgia, Virginia and North Carolina. ECUS and FRUS rent temporary service center facilities in Florida and Kansas, respectively, pending the completion of facilities to be constructed at those locations. FBWS has a renewable, no-cost license for use of space in a U.S. government building at Fort Bliss pending construction of an owned service center. TUS, PSUS, ODUS and ONUS own service centers in Maryland, South Carolina, Virginia and North Carolina, respectively.

[Table of Contents](#)

Mortgage and Other Liens

As of December 31, 2017, neither AWR, GSWC, nor ASUS, or any of its subsidiaries, had any mortgage debt or liens securing indebtedness outstanding.

Under the terms of certain debt instruments, AWR and GSWC are prohibited from issuing any secured debt, without providing equal and ratable security to the holders of this existing debt.

Condemnation of Properties

The laws of the state of California provide for the acquisition of public utility property by governmental agencies through their power of eminent domain, also known as condemnation, where doing so constitutes a more necessary use. In addition, these laws provide that the owner of utility property (i) may contest whether the condemnation is actually necessary, and (ii) is entitled to receive the fair market value of its property if the property is ultimately taken.

Environmental Clean-Up and Remediation of Properties

GSWC has been involved in environmental remediation and clean-up at a plant site ("Chadron Plant") that contained an underground storage tank which was used to store gasoline for its vehicles. This tank was removed from the ground in July 1990 along with the dispenser and ancillary piping. Since then, GSWC has been involved in various remediation activities at this site.

GSWC has accrued an estimated liability which includes costs for two years of continued activities of cleanup and monitoring, and site-closure-related activities. The ultimate cost may vary as there are many unknowns in remediation of underground gasoline spills and this is an estimate based on currently available information. Management believes it is probable that the estimated additional costs will be approved for inclusion in rate base by the CPUC.

Item 3. Legal Proceedings

On December 9, 2014, the City of Claremont, California ("Claremont") filed an eminent domain lawsuit in the County of Los Angeles Superior Court against GSWC (*City of Claremont v. Golden State Water Company, Case No. BC 566125*) to acquire GSWC's Claremont system which serves the City of Claremont and parts of surrounding communities. In December 2016, the County of Los Angeles Superior Court (the "Court") issued a decision rejecting Claremont's attempt to take over GSWC's Claremont water system. In February 2017, the Court further ordered that GSWC be entitled to recover \$7.6 million ("Judgment Amount") of its litigation expenses and related defense costs from Claremont. During the first quarter of 2017, Claremont appealed both decisions.

In October 2017, GSWC and Claremont entered into a settlement agreement whereby Claremont agreed to drop its appeals and in December 2017 paid \$2.0 million to GSWC as partial satisfaction of the Judgment Amount and interest accrued through the end of 2017. Furthermore, quarterly interest-only payments calculated on the unpaid Judgment Amount of \$5.9 million are to be made by Claremont to GSWC over the next 12 years. If Claremont (i) makes all of the quarterly payments as required, and (ii) does not take formal action to condemn GSWC's Claremont water system before December 31, 2029, then on January 1, 2030, the unpaid Judgment Amount will be deemed satisfied by Claremont without further payment required to be made to GSWC. However, if Claremont were to take formal action within the next 12 years or miss any of the required payments specified in the settlement agreement, the unpaid Judgment Amount and any unpaid accrued interest would immediately become due and payable. At this time, GSWC is unable to predict the actions that Claremont will take over the next 12 years. GSWC serves approximately 11,000 customers in Claremont.

On May 12, 2016, Casitas Municipal Water District filed an eminent domain lawsuit in Ventura County Superior Court against GSWC (*Casitas Municipal Water District v. Golden State Water Company, Case No. 56-2016-00481628-CU-EI-VTA*) to acquire the property and assets of GSWC located in its Ojai service area. On April 12, 2017, the Board of Directors of Casitas Municipal Water District ("Casitas") approved a settlement agreement with GSWC, and a group of citizens referred to as Ojai Friends of Locally Owned Water ("Ojai FLOW"), to resolve the eminent domain action and other litigation brought by Casitas and Ojai FLOW against GSWC. In accordance with the terms of the settlement agreement, on June 8, 2017 Casitas acquired the operating assets of GSWC's 2,900-connection Ojai water system by eminent domain for \$34.3 million in cash, including payments for customer receivables and regulatory assets, and Casitas and Ojai FLOW dismissed all claims against GSWC. As a result of this transaction, GSWC recorded a pretax gain of \$8.3 million on the sale of the Ojai water system during the second quarter of 2017.

[Table of Contents](#)

On November 13, 2015, the owners of a commercial building filed suit in Ventura County Superior Court against GSWC (*Khaled A. Al-Awar et al v. Golden State Water Company, Case No. 56-2015-00474589-CU-PO-VTA*) for damages to their building caused by a water main break that occurred in 2014. Repairs to the building had been delayed for a variety of reasons, including a dispute and litigation between two of GSWC's insurance carriers regarding their respective coverage obligations. In September 2017, the Ventura County Superior Court issued a statement of decision in favor of the plaintiffs, and awarded damages to the plaintiffs in the amount of \$2.6 million. Subsequently, the Court also awarded the plaintiffs' attorney fees and other costs. In December 2017, GSWC entered into settlement agreements with its insurance carriers, as well as with the owners of the commercial building, resolving all disputes. The final resolution of this matter resulted in GSWC recording an immaterial charge to expense during the fourth quarter of 2017.

Registrant is subject to ordinary routine litigation incidental to its business, some of which may include claims for compensatory and punitive damages. Management believes that rate recovery, proper insurance coverage and reserves are in place to insure against, among other things, property, general liability, employment, and workers' compensation claims incurred in the ordinary course of business. Insurance coverage may not cover certain claims involving punitive damages.

Item 4. Mine Safety Disclosure

Not applicable.

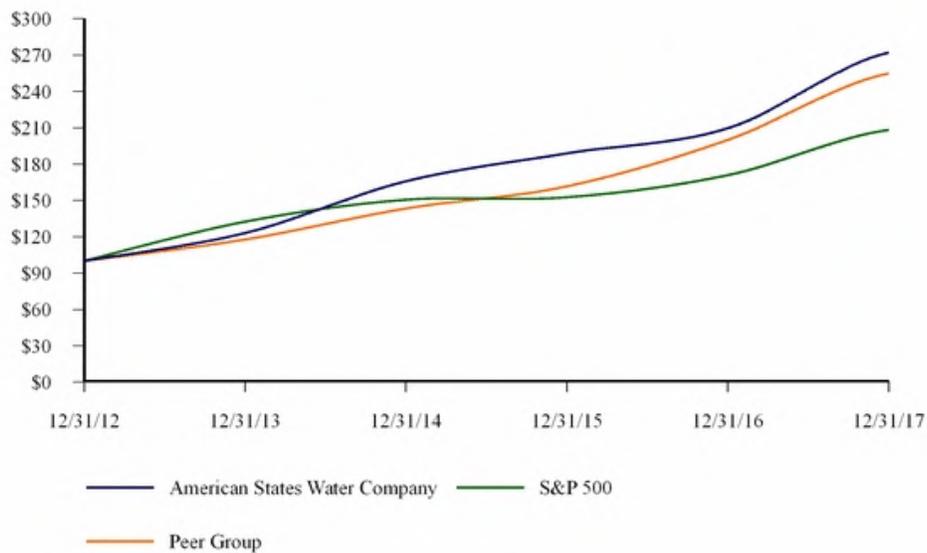

PART II

Item 5. Market for Registrant's Common Equity, Related Stockholder Matters and Issuer Purchases of Equity Securities**Stock Performance Graph**

The graph below compares the cumulative 5-year total return provided shareholders on American States Water Company's Common Shares relative to the cumulative total returns of the S&P 500 index and a peer group of eight publicly traded companies headquartered in the United States. The eight companies included in the Company's customized peer group are: American Water Works Company Inc., Aqua America Inc., Artesian Resources Corporation, California Water Service Group, Connecticut Water Service Inc., Middlesex Water Company, York Water Company and SJW Group.

An investment of \$100 (with reinvestment of all dividends) is assumed to have been made in our Common Shares, and in the common stock in the index and in the peer group on December 31, 2012. Relative performance is tracked through December 31, 2017.

COMPARISON OF 5 YEAR CUMULATIVE TOTAL RETURN*
among American States Water Company, the S&P 500 Index,
and a Peer Group

*\$100 invested on December 31, 2012 in stock or index, including reinvestment of dividends. Fiscal year ending December 31.

The stock price performance included in this graph is not necessarily indicative of future stock price performance.

[Table of Contents](#)**Market Information Relating to Common Shares**

Common Shares of American States Water Company are traded on the New York Stock Exchange (“NYSE”) under the symbol “AWR”. The intra-day high and low NYSE prices on the Common Shares for each quarter during the past two years were:

| | Stock Prices | |
|----------------|--------------|----------|
| | High | Low |
| 2017 | | |
| First Quarter | \$ 45.92 | \$ 41.14 |
| Second Quarter | \$ 50.86 | \$ 43.08 |
| Third Quarter | \$ 51.78 | \$ 46.62 |
| Fourth Quarter | \$ 58.44 | \$ 49.55 |
| 2016 | | |
| First Quarter | \$ 47.24 | \$ 38.25 |
| Second Quarter | \$ 43.83 | \$ 37.28 |
| Third Quarter | \$ 44.46 | \$ 37.51 |
| Fourth Quarter | \$ 46.39 | \$ 37.47 |

The closing price of the Common Shares of American States Water Company on the NYSE on February 22, 2018 was \$53.49.

Approximate Number of Holders of Common Shares

As of February 22, 2018, there were 2,300 holders of record of the 36,715,525 outstanding Common Shares of American States Water Company. AWR owns all of the outstanding Common Shares of GSWC and ASUS. ASUS owns all of the outstanding stock of the Military Utility Privatization Subsidiaries.

Frequency and Amount of Any Dividends Declared and Dividend Restrictions

For the last two years, AWR has paid dividends on its Common Shares on or about March 1, June 1, September 1 and December 1. The following table lists the amounts of dividends paid on Common Shares of American States Water Company:

| | 2017 | 2016 |
|----------------|----------|----------|
| First Quarter | \$ 0.242 | \$ 0.224 |
| Second Quarter | \$ 0.242 | \$ 0.224 |
| Third Quarter | \$ 0.255 | \$ 0.224 |
| Fourth Quarter | \$ 0.255 | \$ 0.242 |
| Total | \$ 0.994 | \$ 0.914 |

AWR’s ability to pay dividends is subject to the requirement in its \$150.0 million revolving credit facility to maintain compliance with all covenants described in footnote (14) to the table in the section entitled “*Contractual Obligations, Commitments and Off Balance Sheet Arrangements*” included in Part II, Item 7, in Management’s Discussion and Analysis of Financial Condition and Results of Operation. GSWC’s maximum ability to pay dividends is restricted by certain Note Agreements to the sum of \$21.0 million plus 100% of consolidated net income from certain dates plus the aggregate net cash proceeds received from capital stock offerings or other instruments convertible into capital stock from various dates. Under the most restrictive of the Note Agreements, \$400.8 million was available from GSWC to pay dividends to AWR as of December 31, 2017. GSWC is also prohibited under the terms of senior notes from paying dividends if, after giving effect to the dividend, its total indebtedness to capitalization ratio (as defined) would be more than 0.6667-to-1. GSWC would have to issue additional debt of \$586.4 million to invoke this covenant as of December 31, 2017.

[Table of Contents](#)

Under California law, AWR, GSWC and ASUS are each permitted to distribute dividends to its shareholders and repurchase its shares so long as the Board of Directors determines, in good faith, that either: (i) the value of the corporation's assets equals or exceeds the sum of its total liabilities immediately after the dividend, or (ii) its retained earnings equals or exceeds the amount of the distribution. Under the least restrictive of the California tests, approximately \$279.8 million was available to pay dividends to AWR's common shareholders and repurchase shares from AWR's common shareholders at December 31, 2017. Approximately \$232.2 million was available for GSWC to pay dividends to AWR at December 31, 2017 and approximately \$62.0 million was available for ASUS to pay dividends to AWR at December 31, 2017. However, ASUS's ability to pay dividends is further subject to the ability of each of its subsidiaries to pay dividends to it, which may, in turn, be restricted by the laws under the state in which the applicable subsidiary was formed.

AWR paid \$36.4 million in dividends to shareholders for the year ended December 31, 2017, as compared to \$33.4 million for the year ended December 31, 2016. GSWC paid dividends of \$27.7 million and \$25.5 million to AWR in 2017 and 2016, respectively. ASUS paid dividends of \$8.9 million and \$8.3 million to AWR in 2017 and 2016, respectively.

Other Information

The shareholders of AWR have approved the material features of all equity-compensation plans under which AWR directly issues equity securities. AWR did not directly issue any unregistered equity securities during 2017.

The following table provides information about AWR repurchases of its Common Shares during the fourth quarter of 2017:

| Period | Total Number of Shares Purchased | Average Price Paid per Share | Total Number of Shares Purchased as Part of Publicly Announced Plans or Programs (1) | Maximum Number of Shares That May Yet Be Purchased under the Plans or Programs (1)(3) |
|-----------------------|----------------------------------|------------------------------|--|---|
| October 1 - 31, 2017 | 1,869 | \$ 53.02 | — | — |
| November 1 - 30, 2017 | 17,107 | \$ 54.46 | — | — |
| December 1 - 31, 2017 | 47,434 | \$ 55.95 | — | — |
| Total | 66,410 (2) | \$ 55.48 | — | — |

- (1) None of the common shares were repurchased pursuant to any publicly announced stock repurchase program.
- (2) Of this amount, 59,359 Common Shares were acquired on the open market for employees pursuant to AWR's 401(k) Plan and the remainder of the Common Shares were acquired on the open market for participants in the Common Share Purchase and Dividend Reinvestment Plan.
- (3) Neither the 401(k) plan nor the Common Share Purchase and Dividend Reinvestment Plan contains a maximum number of common shares that may be purchased in the open market.

(1) 2017 results include an \$8.3 million pretax gain, or \$0.13 per share, from the sale of GSWC's Ojai water system.

(2) Registrant adopted Accounting Standards Update 2015-17, *Balance Sheet Classification of Deferred Taxes*, as of December 31, 2015 on a prospective basis, whereby all deferred tax assets and liabilities are classified as noncurrent on the Registrant's balance sheet. Prior periods were not retrospectively adjusted.

(3) Registrant adopted Accounting Standard Update 2015-03, *Simplifying the Presentation of Debt Issuance Costs* as of December 31, 2016, whereby debt issuance costs and redemption premiums are presented as a direct reduction from the carrying value of the associated debt rather than as an asset. Total Assets and Long-Term Debt have been restated for all periods presented above.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operation

The following discussion and analysis provides information on AWR's consolidated operations and assets, and, where necessary, includes specific references to AWR's individual segments and/or its subsidiaries: GSWC and ASUS and its subsidiaries. Included in the following analysis is a discussion of water and electric gross margins. Water and electric gross margins are computed by subtracting total supply costs from total revenues. Registrant uses these gross margins as important measures in evaluating its operating results. Registrant believes these measures are useful internal benchmarks in evaluating the performance of GSWC.

The discussions and tables included in the following analysis also present Registrant's operations in terms of earnings per share by business segment. Registrant believes that the disclosure of earnings per share by business segment provides investors with clarity surrounding the performance of its different services. Registrant reviews these measurements regularly and compares them to historical periods and to its operating budget. However, these measures, which are not presented in accordance with Generally Accepted Accounting Principles ("GAAP"), may not be comparable to similarly titled measures used by other entities and should not be considered as an alternative to operating income or earnings per share, which are determined in accordance with GAAP. A reconciliation of water and electric gross margins to the most directly comparable GAAP measures is included in the table under the section titled "*Operating Expenses: Supply Costs.*" Reconciliations to AWR's diluted earnings per share are included in the discussions under the sections titled "*Summary Results by Segment.*"

Overview

Factors affecting our financial performance are summarized under *Forward-Looking Information.*

Water and Electric Segments:

GSWC's revenues, operating income and cash flows are earned primarily through delivering potable water to homes and businesses in California and the delivery of electricity in the Big Bear area of San Bernardino County, California. Rates charged to GSWC customers are determined by the CPUC. These rates are intended to allow recovery of operating costs and a reasonable rate of return on capital. GSWC plans to continue to seek additional rate increases in future years from the CPUC to recover operating and supply costs and receive reasonable returns on invested capital. Capital expenditures in future years at GSWC are expected to remain at higher levels than depreciation expense. When necessary, GSWC obtains funds from external sources in the capital markets and through bank borrowings.

Cost of Capital Proceeding for GSWC's Water Regions:

In early April 2017, GSWC filed its water cost of capital application with the CPUC in which it requested an overall weighted return on rate base of 9.11%, including an updated cost of debt of 6.6% and a return on equity ("ROE") of 11%. On February 6, 2018, GSWC, along with three other investor-owned water utilities that serve California, received a Proposed Decision from the CPUC issued in connection with the pending cost of capital proceeding. The Proposed Decision recommends an authorized ROE of 8.23% and a return on rate base of 7.39% for GSWC's water segment, effective January 1, 2018. GSWC's current authorized ROE for its water segment is 9.43% and its return on rate base is 8.34%. The Proposed Decision also continues the water cost of capital adjustment mechanism. If the CPUC adopts the recommendations in the Proposed Decision, the lower return on rate base is expected to decrease GSWC's annual revenue requirement by approximately \$9.5 million beginning in 2018. GSWC filed comments on the Proposed Decision on February 26, 2018 with a final decision expected in late March 2018.

Claremont System:

GSWC successfully defended against an eminent domain lawsuit filed by the City of Claremont, California (the "City") to seize GSWC's water system serving the City and parts of surrounding communities. In December 2016, the presiding judge issued a decision in the six week right-to-take trial, rejecting the City's attempt to take over the water system. In February 2017, it was further ordered that GSWC be entitled to recover \$7.6 million ("Judgment Amount") of its litigation expenses and related defense costs from the City. During the first quarter of 2017, the City appealed both decisions. In October 2017, GSWC and the City entered into a settlement agreement whereby the City agreed to drop its appeals and in December 2017 paid \$2.0 million to GSWC as partial satisfaction of the Judgment Amount, including interest accrued through the end of 2017. GSWC recorded the \$2.0 million as a reduction to legal fees of \$1.8 million and an increase in interest income of \$200,000 in the fourth quarter of 2017. Furthermore, under the settlement agreement, quarterly interest-only payments calculated on the unpaid Judgment Amount of \$5.9 million are to be made by the City to GSWC over the next 12 years. If the City (i) makes all of the quarterly payments as required, and (ii) does not take formal action to condemn GSWC's Claremont water system before December 31, 2029, then on January 1, 2030, the unpaid Judgment Amount will be deemed satisfied by the City without further payment required to be made to GSWC. However, if the City were to take formal action within the next 12 years or miss any of the required quarterly payments, the unpaid Judgment Amount and any unpaid accrued interest

would immediately become due and payable. GSWC is unable to predict the actions that the City will take over the next 12 years and, as a result, will record the quarterly payments only to the extent that they are collected from the City over this period. GSWC serves approximately 11,000 customers in Claremont.

Ojai System:

In accordance with the terms of a settlement agreement reached in April 2017, on June 8, 2017 Casitas Municipal Water District ("Casitas") acquired the operating assets of GSWC's 2,900-connection Ojai water system by eminent domain for \$34.3 million in cash, including payments for customer receivables and regulatory assets, and Casitas along with certain interveners dismissed all claims against GSWC. As a result of this transaction, GSWC recorded a pretax gain of \$8.3 million, or \$0.13 per share, on the sale of the Ojai water system during the second quarter of 2017. The proceeds received from this transaction were used to repay a portion of GSWC's short-term borrowings.

Contracted Services Segment:

ASUS's revenues, operating income and cash flows are earned by providing water and/or wastewater services, including operation and maintenance services and construction of facilities at the water and/or wastewater systems at various military installations, pursuant to 50-year firm fixed-price contracts. The contract price for each of these 50-year contracts is subject to annual economic price adjustments. Additional revenues generated by contract operations are primarily dependent on new construction activities under contract modifications with the U.S. government or agreements with other third-party prime contractors.

New Privatization Contract Award:

On September 29, 2017, ASUS was awarded a new 50-year contract by the U.S. government to operate, maintain, and provide construction management services for the water distribution, and wastewater collection and treatment facilities at Fort Riley, a United States Army installation located in Kansas. The initial value of the contract is approximately \$601.4 million over the 50-year period and is subject to annual economic price adjustments. This initial value is subject to adjustment based on the results of a joint inventory of assets to be performed. ASUS will assume operations at Fort Riley following the completion of a six- to twelve-month transition period currently underway.

Eglin Air Force Base ("Eglin"):

On June 15, 2017, ASUS assumed operations of the water and wastewater systems at Eglin in Florida after completing a transition period and a detailed joint inventory study. The value of the 50-year contract is approximately \$702.4 million. The contract is subject to annual economic price adjustments.

Tax Cuts and Jobs Act:

On December 22, 2017, the Tax Cuts and Jobs Act (the "Tax Act") was signed into federal law. The provisions of this major tax reform are generally effective January 1, 2018. Among its significant provisions, the Tax Act (i) reduces the federal corporate income tax rate from 35% to 21%; (ii) eliminates bonus depreciation for regulated utilities, but allows 100% expensing for the cost of qualified property for non-regulated businesses; (iii) eliminates the provision that treated contributions in aid of construction provided to regulated water utilities as non-taxable; (iv) eliminates the domestic production activities deduction, and (v) limits the amount of net interest that can be deducted; however, this limitation is not applicable to regulated utilities and, therefore is not anticipated to have a material impact to Registrant's ability to deduct net interest.

The most significant change impacting Registrant is the reduction of the corporate federal income tax rate from 35% to 21% effective January 1, 2018. As of December 31, 2017, the cumulative net deferred income tax liabilities (for both flow-through and normalized temporary differences) related to GSWC's rate-regulated activities were reduced by approximately \$90.1 million to reflect the new 21% tax rate. However, this did not impact earnings since this reduction in net deferred income tax liabilities was offset by a corresponding increase to a regulatory liability. The impact to future customer rates related to this regulatory liability is anticipated to generally occur over a period consistent with the remaining lives of the property giving rise to this regulatory liability. The remeasurement of other deferred income tax balances not related to rate-regulated activities did not have a significant impact to Registrant's consolidated results of operations. However, the Tax Act did have a negative impact on earnings at the water segment, which was mostly offset by an increase in earnings at AWR (parent) and, to a lesser extent, at the other two business segments.

GSWC expects the Tax Act to lower rates charged to customers. The estimated benefit to customers is primarily driven by the reduction in the federal income tax rate used in computing customer rates. The effect of the excess deferred income taxes created by the reduction in the federal tax rate and tracked in the regulatory liability, discussed above, is expected to be refunded to customers and may also affect future customer rates. Property-related deferred tax liabilities reduce GSWC's rate base; however, the remeasurement of deferred tax liabilities resulting from the implementation of the Tax Act will not

[Table of Contents](#)

impact GSWC's rate base because of the offsetting increase in a regulatory liability discussed above. Going forward, as new plant is placed in service, the lower federal corporate tax rate will result in lower deferred tax liabilities.

The Tax Act also eliminates bonus depreciation for utilities. As a result of the lower federal tax rate and elimination of bonus depreciation, GSWC expects the Tax Act will create growth in rate base for the same level of expected capital expenditures, partially offset by the impact of higher cost of capital from an increased need to raise debt and/or equity due to lower cash flows from operating activities.

Summary Results by Segment

The table below sets forth diluted earnings per share by business segment for AWR's operations:

| | Diluted Earnings per Share | | |
|-------------------------------------|----------------------------|------------|---------|
| | Year Ended | | |
| | 12/31/2017 | 12/31/2016 | CHANGE |
| Water | \$ 1.35 | \$ 1.17 | \$ 0.18 |
| Electric | 0.11 | 0.10 | 0.01 |
| Contracted services | 0.37 | 0.33 | 0.04 |
| AWR (parent) | 0.05 | 0.02 | 0.03 |
| Totals from operations, as reported | \$ 1.88 | \$ 1.62 | \$ 0.26 |

Water Segment:

For the year ended December 31, 2017, fully diluted earnings per share for the water segment increased by \$0.18 per share to \$1.35 per share, as compared to \$1.17 per share for 2016 due, in large part, to the one-time \$0.13 per share pretax gain on the sale of Ojai assets in June 2017. In addition, in February 2017, the CPUC approved recovery of incremental costs related to California's drought state of emergency, which were previously expensed. As a result of this approval, during the first quarter of 2017 GSWC recorded a regulatory asset and a corresponding increase to pretax earnings of \$1.5 million, or \$0.02 per share, of which \$1.2 million was reflected as a reduction to other operation expenses and approximately \$260,000 was reflected as additional revenue.

Excluding the impact of the items discussed above and an increase in billed surcharges which have no impact to earnings, diluted earnings from the water segment for 2017 increased by \$0.03 per share as compared to 2016 due to the following items, which impacted the comparability between the two periods:

- A decrease in operating expenses (excluding supply costs) of \$3.4 million, or \$0.05 per share, due mostly to (i) lower legal expenses related to condemnation matters, including the \$1.8 million reduction in legal fees recorded in December 2017 pursuant to the Claremont settlement agreement, (ii) lower maintenance costs, and (iii) incurring only a partial year of Ojai-related operating expenses as a result of the sale. These decreases were partially offset by higher medical insurance costs, conservation costs, general rate-case-related expenses, and property and other taxes, as well as an \$800,000 reduction in operating expenses recorded in the fourth quarter of 2016 as a result of the CPUC's water general rate case decision, which granted recovery of previously incurred costs tracked in memorandum accounts.
- An increase in interest and other income, net of interest expense, of \$2.0 million, or \$0.03 per share, due primarily to (i) higher gains recorded on investments as compared to 2016, (ii) amounts collected from developers on certain outstanding balances owed to GSWC, (iii) higher interest income on GSWC's regulatory assets resulting mostly from an increase in the 90-day commercial paper rate, and (iv) interest income related to the Claremont settlement payment received in December 2017 previously discussed.

The increase in diluted earnings from the water segment discussed above were partially offset by the following:

- An overall decrease in the water gross margin of \$2.3 million, or \$0.03 per share, largely due to the cessation of Ojai operations in June 2017. This was partially offset by revenues generated from CPUC-approved second-year rate increases effective January 1, 2017.
- An overall increase in water's effective income tax rate ("ETR"), which negatively impacted water earnings by approximately \$0.02 per share. The increase in the ETR was due, in large part, to the remeasurement of certain non-rate-regulated deferred tax assets (primarily compensation- and benefit-related items) in connection with the Tax Act, which negatively impacted water earnings by approximately \$0.03 per share. This was partially offset by changes in flow-through and permanent items at the water segment.

[Table of Contents](#)Electric Segment:

For the year ended December 31, 2017, diluted earnings from the electric segment increased by \$0.01 per share as compared to the same period in 2016. Operating expenses (other than supply costs) decreased by \$1.2 million primarily due to additional costs incurred in 2016 in response to power outages caused by severe winter storms experienced in January 2016, lower regulatory costs, and lower costs associated with energy efficiency and solar power programs approved by the CPUC. There was also a decrease in the effective income tax rate for the electric segment as compared to the same period in 2016 resulting from flow-through items. These increases to earnings were partially offset by a lower electric gross margin, which was due to a downward adjustment to the revenue requirement to reflect a decrease in the general office allocation as stipulated in the CPUC's December 2016 decision on the water general rate case.

Contracted Services Segment:

For the year ended December 31, 2017, diluted earnings from contracted services were \$0.37 per share, compared to \$0.33 per share for the same period in 2016. There was an increase in management fee revenues from the successful resolution of various price adjustments and asset transfers received during 2016 and 2017. This includes approximately \$1.0 million, or \$0.02 per share, of retroactive management fees recorded in 2017 which related to periods prior to 2017, as compared to \$421,000, or \$0.01 per share, of retroactive management fees recorded in 2016 which related to periods prior to 2016. There was also an increase in management fees and construction revenues generated from the operations at Eglin Air Force Base ("Eglin"), which began in June 2017. These increases to earnings were partially offset by higher operating costs due to Eglin's transition activities and joint inventory study, as well as increases in labor and outside services costs related to business development and compliance.

AWR (parent):

For the year ended December 31, 2017, diluted earnings from AWR (parent) increased \$0.03 per share compared to 2016 due to lower state taxes, as well as the remeasurement of federal deferred tax liabilities associated with the California state unitary deferred tax balances. The remeasurement was based on the Tax Act's lower federal corporate tax rate of 21% as compared to 35%, which increased earnings at AWR (parent) by approximately \$0.02 per share during 2017.

The following discussion and analysis for the years ended December 31, 2017, 2016 and 2015 provides information on AWR's consolidated operations and assets and, where necessary, includes specific references to AWR's individual segments and subsidiaries: GSWC and ASUS and its subsidiaries.

* not applicable

Operating Revenues

General

Registrant relies upon approvals by the CPUC of rate increases to recover operating expenses and to provide for a return on invested and borrowed capital used to fund utility plant for GSWC. Registrant relies on economic price adjustments and equitable adjustments by the U.S. government in order to recover operating expenses and provide a profit margin for ASUS. If adequate rate relief or adjustments are not granted in a timely manner, current operating revenues and earnings can be negatively impacted. ASUS's earnings are also impacted by the level of additional construction projects at the Military Utility Privatization Subsidiaries, which may or may not continue at current levels in future periods.

Water

For the year ended December 31, 2017, revenues from water operations increased by \$3.4 million to \$306.3 million, compared to \$302.9 million for the year ended December 31, 2016. The increase was primarily due to second-year rate increases effective January 1, 2017, and rate increases to specifically cover increases in supply costs experienced in certain rate-making areas. The rate changes related to supply costs are largely offset by a corresponding increase in supply costs, resulting in an insignificant change to the water gross margin. There were also new surcharges implemented during 2017 to recover previously incurred costs, which were offset by a corresponding increase in operating expenses (primarily administrative and general) totaling \$3.6 million, resulting in no impact to earnings. These increases in revenues were partially offset by lower revenues due to the cessation of Ojai operations in June 2017.

Billed water consumption for the year ended December 31, 2017 increased approximately 4% as compared to 2016. In general, changes in consumption do not have a significant impact on recorded revenues due to the CPUC-approved WRAM accounts in place in the majority of GSWC's rate-making areas. GSWC records the difference between what it bills its water customers and that which is authorized by the CPUC in the WRAM accounts as regulatory assets or liabilities.

Electric

In 2016, the CPUC granted BVES's request to defer the filing of its next electric general rate case to 2017, setting new rates for the years 2018 through 2021. As a result, adopted base revenues for 2017 were based on 2016 adopted base revenues, adjusted for the change in the general office allocation approved by the CPUC in the water general rate case. For the year ended December 31, 2017, revenues from electric operations were \$34.0 million as compared to \$35.8 million for the year ended December 31, 2016. This decrease was primarily due to the reduction in the adopted revenue requirement for electric to reflect a decrease in the general office allocation. In May 2017, BVES filed its general rate case application with the CPUC. A final decision is expected in 2018.

Billed electric usage for the year ended December 31, 2017 decreased slightly as compared to the same period in 2016. Due to the CPUC-approved base revenue requirement adjustment mechanism ("BRRAM"), which adjusts base revenues to adopted levels authorized by the CPUC, changes in usage do not have a significant impact on earnings.

Contracted Services

Revenues from contracted services are composed of construction revenues (including renewal and replacements) and management fees for operating and maintaining the water and/or wastewater systems at various military bases. For the year ended December 31, 2017, revenues from contracted services were \$100.3 million as compared to \$97.4 million for 2016. There was an increase in ongoing operations and maintenance management fees due to the successful resolution of various price adjustments and asset transfers during 2016 and 2017, as well as the commencement of operations at Eglin in June 2017. Included in management fees for 2017 was approximately \$1.0 million in retroactive revenues related to periods prior to 2017, as compared to \$421,000 of retroactive management fees recorded in 2016 which related to periods prior to 2016. These increases were partially offset by a decrease in construction activity in 2017 as compared to 2016.

ASUS's subsidiaries continue to enter into U.S. government-awarded contract modifications and agreements with third-party prime contractors for new construction projects at the military bases served. During 2017, ASUS was awarded approximately \$20.2 million in new construction projects, the majority of which are expected to be completed during 2018. Earnings and cash flows from modifications to the original 50-year contracts with the U.S. government and agreements with third-party prime contractors for additional construction projects may or may not continue in future periods.

[Table of Contents](#)**Operating Expenses:****Supply Costs**

Supply costs for the water segment consist of purchased water, purchased power for pumping, groundwater production assessments and changes in the water supply cost balancing accounts. Supply costs for the electric segment consist of purchased power for resale, the cost of natural gas used by BVES's generating unit, the cost of renewable energy credits and changes in the electric supply cost balancing account. Water and electric gross margins are computed by subtracting total supply costs from total revenues. Registrant uses these gross margins and related percentages as an important measure in evaluating its operating results. Registrant believes these measures are useful internal benchmarks in evaluating the utility business performance within its water and electric segments. Registrant reviews these measurements regularly and compares them to historical periods and to its operating budget. However, these measures, which are not presented in accordance with GAAP, may not be comparable to similarly titled measures used by other entities and should not be considered as an alternative to operating income, which is determined in accordance with GAAP.

Total supply costs comprise the largest segment of total operating expenses. Supply costs accounted for 28.1% and 26.8% of total operating expenses for the years ended December 31, 2017 and 2016, respectively.

The table below provides the amounts (in thousands) of increases (decreases) and percent changes in water and electric revenues, supply costs and gross margins during the years ended December 31, 2017 and 2016:

| | Year Ended 12/31/2017 | Year Ended 12/31/2016 | \$ CHANGE | % CHANGE |
|---|--------------------------|--------------------------|--------------|-------------|
| WATER OPERATING REVENUES (1) | \$ 306,332 | \$ 302,931 | \$ 3,401 | 1.1 % |
| WATER SUPPLY COSTS: | | | | |
| Water purchased (1) | 68,302 | 64,442 | 3,860 | 6.0 % |
| Power purchased for pumping (1) | 8,518 | 8,663 | (145) | -1.7 % |
| Groundwater production assessment (1) | 18,638 | 14,993 | 3,645 | 24.3 % |
| Water supply cost balancing accounts (1) | (20,289) | (14,813) | (5,476) | 37.0 % |
| TOTAL WATER SUPPLY COSTS | \$ 75,169 | \$ 73,285 | \$ 1,884 | 2.6 % |
| WATER GROSS MARGIN (2) | \$ 231,163 | \$ 229,646 | \$ 1,517 | 0.7 % |
| ELECTRIC OPERATING REVENUES (1) | \$ 33,969 | \$ 35,771 | \$ (1,802) | -5.0 % |
| ELECTRIC SUPPLY COSTS: | | | | |
| Power purchased for resale (1) | 10,720 | 10,387 | 333 | 3.2 % |
| Electric supply cost balancing accounts (1) | 2,350 | 2,607 | (257) | -9.9 % |
| TOTAL ELECTRIC SUPPLY COSTS | \$ 13,070 | \$ 12,994 | \$ 76 | 0.6 % |
| ELECTRIC GROSS MARGIN (2) | \$ 20,899 | \$ 22,777 | \$ (1,878) | -8.2 % |

(1) As reported on AWR's Consolidated Statements of Income, except for supply-cost-balancing accounts. The sums of water and electric supply-cost balancing accounts in the table above are shown on AWR's Consolidated Statements of Income and totaled \$(17.9) million and \$(12.2) million for the years ended December 31, 2017 and 2016, respectively. Revenues include surcharges, which increase both revenues and operating expenses by corresponding amounts, thus having no net earnings impact.

(2) Water and electric gross margins do not include depreciation and amortization, maintenance, administrative and general, property and other taxes, and other operation expenses.

Two of the principal factors affecting water supply costs are the amount of water produced and the source of the water. Generally, the variable cost of producing water from wells is less than the cost of water purchased from wholesale suppliers. Under the CPUC-approved Modified Cost Balancing Account ("MCBA"), GSWC tracks adopted and actual expense levels for purchased water, power purchased for pumping and pump taxes. GSWC records the variances (which include the effects of changes in both rate and volume) between adopted and actual purchased water, purchased power and pump tax expenses. GSWC recovers from or refunds to customers the amount of such variances. GSWC tracks these variances individually for each water ratemaking area.

[Table of Contents](#)

The overall actual percentages for purchased water for the years ended December 31, 2017 and 2016 were 42% and 40%, respectively, as compared to the adopted percentages of 28% and 29% for 2017 and 2016, respectively. The higher actual percentages of purchased water as compared to adopted percentages resulted primarily from several wells being out of service.

Purchased water costs for the year ended December 31, 2017 increased to \$68.3 million as compared to \$64.4 million for the same period in 2016 primarily due to an increase of purchased water in the supply mix as a result of several wells being out of service, as well as an increase in wholesale water costs as compared to the year ended December 31, 2016.

For the year ended December 31, 2017, the cost of power purchased for pumping decreased slightly to \$8.5 million as compared to \$8.7 million for the same period in 2016 primarily due to decreases in pumped water. Groundwater production assessments were \$18.6 million in 2017 as compared to \$15.0 million in 2016 due to an increase in pump tax rates and pump taxes paid for water storage rights during 2017 as compared to 2016.

The under-collection in the water supply cost balancing account increased \$5.5 million during the year ended December 31, 2017 as compared to the same period in 2016 due to the higher purchased water costs as well as higher groundwater production assessments as compared to adopted water supply costs.

For the year ended December 31, 2017, the cost of power purchased for resale to BVES's customers was \$10.7 million as compared to \$10.4 million for the same period in 2016. The average price per megawatt-hour ("MWh"), including fixed costs, increased to \$73.03 per MWh in 2017 from \$69.54 per MWh for the year ended December 31, 2016.

Other Operation

The primary components of other operation expenses for GSWC include payroll, materials and supplies, chemicals and water treatment costs and outside service costs of operating the regulated water and electric systems, including the costs associated with transmission and distribution, pumping, water quality, meter reading, billing and operations of district offices. Registrant's contracted services operations incur many of the same types of expenses. For the years ended December 31, 2017 and 2016, other operation expenses by business segment consisted of the following amounts (in thousands):

| | Year Ended | Year Ended | \$ | % |
|-----------------------|---------------|---------------|----------|---------|
| | 12/31/2017 | 12/31/2016 | CHANGE | CHANGE |
| Water Services | \$ 22,189 | \$ 21,649 | \$ 540 | 2.5 % |
| Electric Services | 2,688 | 3,122 | (434) | -13.9 % |
| Contracted Services | 5,117 | 3,486 | 1,631 | 46.8 % |
| Total other operation | \$ 29,994 | \$ 28,257 | \$ 1,737 | 6.1 % |

During 2017, there was a \$433,000 increase in surcharges billed to customers to recover previously incurred other operation expenses approved by the CPUC as part of the final decision on the water general rate case. These surcharges increased revenues and water gross margin with a corresponding increase in other operation expenses, resulting in no impact to earnings. Furthermore, in February 2017, the CPUC approved the recovery of incremental drought-related costs incurred in 2015 and 2016 during the drought state of emergency in California. As a result of the CPUC's approval, GSWC recorded a \$1.2 million regulatory asset with a corresponding reduction in other operation expenses during the first quarter of 2017. Excluding the impact of surcharges and the recovery of drought-related costs, other operation expenses at the water segment increased by \$1.3 million during the year ended December 31, 2017 as compared to the same period in 2016. The increase was due primarily to higher conservation costs, labor and bad debt expense.

The decrease in other operation expenses at the electric segment was due to outside services costs and labor costs incurred in response to power outages caused by severe winter storms experienced in January 2016. There were no similar events in 2017.

For the year ended December 31, 2017, total other operation expenses for the contracted services segment increased mainly due to transition costs incurred at Eglin, including a joint inventory study conducted with the U.S. government for the water and wastewater system infrastructure. ASUS assumed operations at Eglin in June 2017, which further increased other operation expenses in 2017 as compared to 2016. A joint inventory study with the U.S. government is currently underway at Fort Riley as part of its transition to ASUS. In accordance with the 50-year contract with the U.S. government, ASUS receives revenues to help cover the cost of the transition at Fort Riley. ASUS will assume the operations at Fort Riley in 2018 following the completion of a transition period currently underway.

Administrative and General

Administrative and general expenses include payroll related to administrative and general functions, the related employee benefits, insurance expenses, outside legal and consulting fees, regulatory utility commission expenses, expenses associated with being a public company and general corporate expenses charged to expense accounts. For the years ended December 31, 2017 and 2016, administrative and general expenses by business segment, including AWR (parent), consisted of the following amounts (in thousands):

| | Year Ended | Year Ended | \$ | % |
|----------------------------------|---------------|---------------|----------|---------|
| | 12/31/2017 | 12/31/2016 | CHANGE | CHANGE |
| Water Services | \$ 55,352 | \$ 56,165 | \$ (813) | -1.4 % |
| Electric Services | 6,879 | 7,901 | (1,022) | -12.9 % |
| Contracted Services | 19,335 | 16,909 | 2,426 | 14.3 % |
| AWR (parent) | 96 | 19 | 77 | 405.3 % |
| Total administrative and general | \$ 81,662 | \$ 80,994 | \$ 668 | 0.8 % |

Surcharges were implemented in 2017 to recover previously incurred administrative and general costs approved by the CPUC as part of the final decision on the water general rate case issued in March 2017. A \$3.3 million increase in revenues and water gross margin from these surcharges was offset by a corresponding increase in administrative and general expense to reflect the recovery of these costs, resulting in no impact to earnings. Excluding the increase in billed surcharges, administrative and general expenses at the water segment decreased by \$4.1 million due primarily to lower legal expenses related to condemnation matters as compared to 2016. In addition, the Claremont settlement payment received in December 2017 included approximately \$1.8 million in reimbursement of litigation costs, which was reflected as a reduction to legal expenses in 2017. These decreases were partially offset by higher medical insurance costs and general-rate-case-related expenses, as well as an \$800,000 reduction to administrative and general expenses recorded in 2016 to reflect the CPUC's approval for recovery of previously incurred costs that were being tracked in CPUC-authorized memorandum accounts.

For the year ended December 31, 2017, administrative and general expenses for the electric segment decreased by \$1.0 million as compared to 2016 due to lower regulatory costs, as well as decreases in costs associated with the energy-efficiency and solar-initiative programs approved by the CPUC.

For the year ended December 31, 2017, administrative and general expenses for contracted services increased by \$2.4 million due primarily to (i) an increase in labor-related costs, (ii) the start of operations at Eglin in June 2017, which increased administrative and general expenses in 2017 as compared to 2016, and (iii) an increase in outside services costs related to new business development and compliance.

Depreciation and Amortization

For the years ended December 31, 2017 and 2016, depreciation and amortization expense by segment consisted of the following amounts (in thousands):

| | Year Ended | Year Ended | \$ | % |
|-------------------------------------|---------------|---------------|---------|--------|
| | 12/31/2017 | 12/31/2016 | CHANGE | CHANGE |
| Water Services | \$ 35,706 | \$ 35,777 | \$ (71) | -0.2 % |
| Electric Services | 2,146 | 2,027 | 119 | 5.9 % |
| Contracted Services | 1,179 | 1,046 | 133 | 12.7 % |
| Total depreciation and amortization | \$ 39,031 | \$ 38,850 | \$ 181 | 0.5 % |

For the year ended December 31, 2017, depreciation and amortization expense at the water segment decreased due primarily to retirements recorded during 2017 and 2016, as well as the sale of the Ojai utility assets in June 2017. These decreases were largely offset by additions to utility plant during 2017. The increases for the electric and contracted services segments were due primarily to additions to plant in 2017.

[Table of Contents](#)**Maintenance**

For the years ended December 31, 2017 and 2016, maintenance expense by segment consisted of the following amounts (in thousands):

| | Year Ended | Year Ended | \$ | % |
|---------------------|------------|------------|------------|---------|
| | 12/31/2017 | 12/31/2016 | CHANGE | CHANGE |
| Water Services | \$ 12,101 | \$ 13,783 | \$ (1,682) | -12.2 % |
| Electric Services | 869 | 736 | 133 | 18.1 % |
| Contracted Services | 2,206 | 1,951 | 255 | 13.1 % |
| Total maintenance | \$ 15,176 | \$ 16,470 | \$ (1,294) | -7.9 % |

Maintenance expense for water services decreased by \$1.7 million due to an overall lower level of planned and unplanned maintenance in 2017. Maintenance expense for contracted services increased due primarily to the commencement of operations at Eglin in June 2017.

Property and Other Taxes

For the years ended December 31, 2017 and 2016, property and other taxes by segment, consisted of the following amounts (in thousands):

| | Year Ended | Year Ended | \$ | % |
|--------------------------------|------------|------------|----------|--------|
| | 12/31/2017 | 12/31/2016 | CHANGE | CHANGE |
| Water Services | \$ 15,336 | \$ 14,362 | \$ 974 | 6.8 % |
| Electric Services | 1,066 | 1,082 | (16) | -1.5 % |
| Contracted Services | 1,503 | 1,357 | 146 | 10.8 % |
| Total property and other taxes | \$ 17,905 | \$ 16,801 | \$ 1,104 | 6.6 % |

Property and other taxes increased overall by \$1.1 million during 2017 as compared to 2016 due primarily to capital additions at the water segment.

ASUS Construction

For the year ended December 31, 2017, construction expenses for contracted services were \$49.8 million, decreasing by \$3.9 million compared to the same period in 2016 due to an overall decrease in construction activity.

Gain on Sale of Assets

In June 2017, GSWC completed the sale of its Ojai water system to Casitas for \$34.3 million, resulting in a pretax gain of \$8.3 million on the sale of the assets.

Interest Expense

For the years ended December 31, 2017 and 2016, interest expense by segment, including AWR (parent), consisted of the following amounts (in thousands):

| | Year Ended | Year Ended | \$ | % |
|------------------------|------------|------------|--------|--------|
| | 12/31/2017 | 12/31/2016 | CHANGE | CHANGE |
| Water Services | \$ 20,670 | \$ 20,430 | \$ 240 | 1.2% |
| Electric Services | 1,385 | 1,352 | 33 | 2.4% |
| Contracted Services | 269 | 76 | 193 | 253.9% |
| AWR (parent) | 258 | 134 | 124 | 92.5% |
| Total interest expense | \$ 22,582 | \$ 21,992 | \$ 590 | 2.7% |

Overall, interest expense for the year ended December 31, 2017 increased by \$590,000 as compared to the same period in 2016 due largely to higher average borrowings on the revolving credit facility as compared to 2016. The borrowings were used to fund operations and a portion of capital expenditures. The proceeds received in June 2017 from the completed sale of GSWC's Ojai system were used to repay a portion of these borrowings. Borrowings on the revolving credit facility are expected to continue in 2018 to fund operations and a portion of capital expenditures.

[Table of Contents](#)**Interest Income**

For the years ended December 31, 2017 and 2016, interest income by business segment, including AWR (parent), consisted of the following amounts (in thousands):

| | Year Ended | Year Ended | \$ | % |
|-----------------------|------------|------------|----------|---------|
| | 12/31/2017 | 12/31/2016 | CHANGE | CHANGE |
| Water Services | \$ 1,761 | \$ 734 | \$ 1,027 | 139.9 % |
| Electric Services | 5 | 15 | (10) | -66.7 % |
| Contracted Services | 14 | 8 | 6 | 75.0 % |
| AWR (parent) | 10 | — | 10 | — % |
| Total interest income | \$ 1,790 | \$ 757 | \$ 1,033 | 136.5 % |

Interest income increased by \$1.0 million for the year ended December 31, 2017 as compared to the same period in 2016 due primarily to (i) the collection of certain amounts from developers previously owed to GSWC, (ii) higher interest income on GSWC's regulatory assets resulting mostly from an increase in the 90-day commercial paper rate, and (iii) interest income related to the Claremont settlement payment received in December 2017.

Other, net

For the year ended December 31, 2017, other income increased by \$1.1 million primarily due to higher gains recorded on investments held for a retirement benefit plan resulting from more favorable market conditions as compared to 2016.

Income Tax Expense

For the years ended December 31, 2017 and 2016, income tax expense by segment, including AWR (parent), consisted of the following amounts (in thousands):

| | Year Ended | Year Ended | \$ | % |
|--------------------------|------------|------------|----------|---------|
| | 12/31/2017 | 12/31/2016 | CHANGE | CHANGE |
| Water Services | \$ 32,212 | \$ 25,894 | \$ 6,318 | 24.4 % |
| Electric Services | 1,847 | 2,715 | (868) | -32.0 % |
| Contracted Services | 7,136 | 6,672 | 464 | 7.0 % |
| AWR (parent) | (2,221) | (546) | (1,675) | 306.8 % |
| Total income tax expense | \$ 38,974 | \$ 34,735 | \$ 4,239 | 12.2 % |

Consolidated income tax expense for the year ended December 31, 2017 increased by \$4.2 million due primarily to an increase in pretax income. AWR's effective income tax rate ("ETR") was 36.0% and 36.8% for the years ended December 31, 2017 and 2016, respectively. The ETR for GSWC was 38.8% for 2017 as compared to 37.9% for 2016 due, in part, to the remeasurement of non rate-regulated deferred tax assets as a result of the Tax Act, which reduced the federal corporate tax rate from 35% to 21%. The earnings impact of this increase in GSWC's ETR was largely offset by a reduction in deferred tax liabilities at AWR (parent), due also to the remeasurement of federal deferred tax liabilities associated with the California state unitary deferred tax balance.

[Table of Contents](#)**Consolidated Results of Operations — Years Ended December 31, 2016 and 2015 (amounts in thousands, except per share amounts):**

| | Year Ended 12/31/2016 | Year Ended 12/31/2015 | \$ CHANGE | % CHANGE |

| NET INCOME | <u>\$ 59,743</u> | <u>\$ 60,484</u> | <u>\$ (741)</u> | -1.2 % |
| Basic earnings per Common Share | <u>\$ 1.63</u> | <u>\$ 1.61</u> | <u>\$ 0.02</u> | 1.2 % |
| Fully diluted earnings per Common Share | <u>\$ 1.62</u> | <u>\$ 1.60</u> | <u>\$ 0.02</u> | 1.3 % |

[Table of Contents](#)

The table below sets forth diluted earnings per share by business segment for AWR's operations:

| | Diluted Earnings per Share | | |
|-------------------------------------|----------------------------|------------|-----------|
| | Year Ended | | CHANGE |
| | 12/31/2016 | 12/31/2015 | |
| Water | \$ 1.17 | \$ 1.19 | \$ (0.02) |
| Electric | 0.10 | 0.07 | 0.03 |
| Contracted services | 0.33 | 0.32 | 0.01 |
| AWR (parent) | 0.02 | 0.02 | — |
| Totals from operations, as reported | \$ 1.62 | \$ 1.60 | \$ 0.02 |

Water Segment:

For the year ended December 31, 2016, fully diluted earnings per share for the water segment decreased by \$0.02 per share to \$1.17 per share, as compared to \$1.19 per share for 2015. The discussion below includes the major items, which impacted the comparability of the two periods.

- The water gross margin decreased by \$9.9 million as a result of lower 2016 adopted revenues authorized by the CPUC's decision in the water general rate case ("GRC"), which sets new rates for the years 2016 - 2018. The adopted gross margin in this rate cycle (starting with 2016) was lower due, in large part, to decreases in adopted expenses including depreciation expense resulting from an updated depreciation study, and many other operating expenses resulting from GSWC's cost containment initiatives. The reduction in the water gross margin was mostly offset by corresponding decreases in depreciation and certain other operating expenses as discussed below. The decrease in the adopted water gross margin was also partially offset by (i) the recognition of a portion of the 2015 WRAM revenues that had previously been deferred as required under the accounting guidance for revenue programs such as the WRAM, (ii) new revenues generated from a water system acquired in October 2015, (iii) higher revenues due to increased consumption as compared to 2015 from customers that are not subject to conservation rates, and (iv) revenues from advice letter capital projects approved by the CPUC in 2015.
- Total operating expenses (excluding supply costs, and condemnation-related costs discussed below) decreased by approximately \$7.6 million. The lower operating expenses, most of which were reflected in the lower gross margin, included a decrease in (i) depreciation expense resulting from a new depreciation study approved in the water GRC, (ii) allocated costs to the water segment from corporate headquarters as stipulated in the water GRC, and (iii) pension and other operating expenses. In addition, the CPUC's approval for recovery of approximately \$800,000 of previously incurred costs, which were being tracked in CPUC-authorized memorandum accounts, was reflected as a decrease in operating expenses.
- Negatively impacting the water segment's results was an increase of approximately \$4.0 million in legal and other outside service costs incurred on condemnation-related matters.
- Favorably impacting the water segment's results was (i) a decrease in the effective income tax rate for the water segment due to differences between book and taxable income that are treated as flow-through adjustments in accordance with regulatory requirements, and (ii) the cumulative impact of lower Common Shares outstanding resulting from stock repurchase programs in 2014 and 2015.

Electric Segment:

For the year ended December 31, 2016, diluted earnings from the electric segment increased by \$0.03 per share as compared to the same period in 2015. There was an increase in the electric gross margin resulting from CPUC approval of fourth-year rate increases effective January 1, 2016, as well as CPUC-approved rate increases generated from advice letter filings approved in 2015 and 2016. There was also a decrease in allocated costs to the electric segment from corporate headquarters as stipulated in the water GRC decision and a decrease in expenses associated with the CPUC-approved solar-initiative program.

Contracted Services Segment:

For the year ended December 31, 2016, diluted earnings from contracted services were \$0.33 per share, compared to \$0.32 per share for the same period in 2015. The increase in earnings was due to higher contracted services revenue resulting from an increase in ongoing operations and maintenance revenues due to the successful resolution of price redeterminations, economic price adjustments and asset transfers, and an overall increase in construction activity and a higher direct construction margin percentage resulting from improved cost efficiencies. The effect of these favorable variances was partially offset by (i) an increase in the allocation of administrative and general expenses from corporate headquarters to the contracted services

segment as stipulated in the water GRC, (ii) an increase in ASUS labor and outside services costs, and (iii) a higher effective income tax rate resulting primarily from an increase in state income taxes as compared to the same period in 2015. State income taxes vary among the jurisdictions in which the contracted services business operates. In addition, there was \$3.0 million of retroactive revenues recorded in 2015 related to periods prior to 2015 resulting from the resolution of several price redeterminations, as compared to approximately \$421,000 in retroactive revenues recorded in 2016 related to 2015.

The following discussion and analysis for the years ended December 31, 2016 and 2015 provides information on AWR's consolidated operations and assets and, where necessary, includes specific references to AWR's individual segments and subsidiaries: GSWC and ASUS and its subsidiaries.

Operating Revenues

Water

For the year ended December 31, 2016, revenues from water operations decreased by \$25.6 million to \$302.9 million, compared to \$328.5 million for the year ended December 31, 2015. The 2016 adopted revenues in the CPUC's December 2016 decision on the water general rate case were approximately \$29.8 million lower than the 2015 adopted revenues mainly due to reductions in the revenue requirement for: (i) supply costs caused by lower consumption, (ii) depreciation expense resulting from an updated depreciation study, and (iii) other operating expenses resulting from GSWC's cost containment initiatives. This reduction in water revenues was mostly offset by corresponding decreases in supply costs, depreciation and certain other operating expenses.

The reduction in adopted revenues was partially offset by (i) revenues generated from a water system acquired in October 2015, (ii) higher revenues due to increased consumption as compared to 2015 from customers that are not subject to conservation rates, (iii) revenues from advice letter capital projects approved by the CPUC in 2015, and (iv) the recognition of a portion of the 2015 WRAM revenues that had previously been deferred as required under the accounting guidance for alternative revenue programs such as the WRAM. Under the accounting guidance, GSWC is required to collect its WRAM balances, net of MCBA, within 24 months following the year in which they are recorded. During the fourth quarter of 2015, GSWC did not record water revenues of \$1.4 million related to its 2015 under-collected WRAM balances as it was estimated that this amount would not be fully collected within 24 months following the end of 2015 using the required CPUC amortization guidelines. During 2016, GSWC recognized approximately \$910,000 of the \$1.4 million as water revenue.

Billed water consumption for the year ended December 31, 2016 increased slightly as compared to the same period in 2015. In general, changes in consumption do not have a significant impact on recorded revenues due to the CPUC-approved WRAM accounts in place in all three water regions. GSWC records the difference between what it bills its water customers and that which is authorized by the CPUC in the WRAM accounts as regulatory assets or liabilities.

Electric

For the year ended December 31, 2016, revenues from electric operations were \$35.8 million as compared to \$36.0 million for the year ended December 31, 2015. The decrease was due to the termination in August 2015 of a supply cost surcharge to recover previously incurred energy costs. The decrease in revenues from the termination of this surcharge was approximately \$1.4 million and had no impact on pretax operating income due to an offsetting decrease in supply costs. This decrease in revenue was mostly offset by CPUC-approved fourth-year rate increases effective January 1, 2016, and rate increases generated from advice letter filings approved by the CPUC during 2015 and 2016.

Billed electric usage for the year ended December 31, 2016 decreased by approximately 4% as compared to the same period in 2015. The cold weather and storms experienced in the Big Bear area in late 2016 resulted in less need for snowmaking. In addition, solar and energy efficiency programs offered by BVES have resulted in less customer usage. Due to the CPUC-approved BRRAM, which adjusts base revenues to adopted levels authorized by the CPUC, changes in usage do not have a significant impact on earnings.

Contracted Services

Revenues from contracted services are composed of construction revenues (including renewal and replacements) and management fees for operating and maintaining the water and/or wastewater systems at various military bases. For the year ended December 31, 2016, revenues from contracted services were \$97.4 million as compared to \$94.1 million for 2015. There was an increase in ongoing operations and maintenance management fees due to the successful resolution of price redeterminations, economic price adjustments and asset transfers. There was also an overall increase in construction activity at various military bases as compared to 2015. These increases were partially offset by a decrease in retroactive revenues received in 2016 as compared to 2015. In 2015, there was \$3.0 million of retroactive management fee revenues recorded related to periods prior to 2015 resulting from the resolution of several price redeterminations, as compared to approximately \$421,000 in retroactive revenues recorded in 2016 related to 2015.

[Table of Contents](#)**Operating Expenses:****Supply Costs**

Total supply costs comprise the largest segment of total operating expenses. Supply costs accounted for 26.8% and 30.4% of total operating expenses for the years ended December 31, 2016 and 2015, respectively. The table below provides the amounts (in thousands) of increases (decreases) and percent changes in water and electric revenues, supply costs and gross margins during the years ended December 31, 2016 and 2015:

| | Year Ended 12/31/2016 | Year Ended 12/31/2015 | \$ CHANGE | % CHANGE |
|---|--------------------------|--------------------------|--------------|-------------|
| WATER OPERATING REVENUES (1) | \$ 302,931 | \$ 328,511 | \$ (25,580) | -7.8 % |
| WATER SUPPLY COSTS: | | | | |
| Water purchased (1) | 64,442 | 62,726 | 1,716 | 2.7 % |
| Power purchased for pumping (1) | 8,663 | 8,988 | (325) | -3.6 % |
| Groundwater production assessment (1) | 14,993 | 13,648 | 1,345 | 9.9 % |
| Water supply cost balancing accounts (1) | (14,813) | 3,623 | (18,436) | -508.9 % |
| TOTAL WATER SUPPLY COSTS | \$ 73,285 | \$ 88,985 | \$ (15,700) | -17.6 % |
| WATER GROSS MARGIN (2) | \$ 229,646 | \$ 239,526 | \$ (9,880) | -4.1 % |
| ELECTRIC OPERATING REVENUES (1) | \$ 35,771 | \$ 36,039 | \$ (268) | -0.7 % |
| ELECTRIC SUPPLY COSTS: | | | | |
| Power purchased for resale (1) | 10,387 | 10,395 | (8) | -0.1 % |
| Electric supply cost balancing accounts (1) | 2,607 | 4,162 | (1,555) | -37.4 % |
| TOTAL ELECTRIC SUPPLY COSTS | \$ 12,994 | \$ 14,557 | \$ (1,563) | -10.7 % |
| ELECTRIC GROSS MARGIN (2) | \$ 22,777 | \$ 21,482 | \$ 1,295 | 6.0 % |

(1) As reported on AWR's Consolidated Statements of Income, except for supply-cost-balancing accounts. The sums of water and electric supply-cost balancing accounts in the table above are shown on AWR's Consolidated Statements of Income and totaled \$(12.2) million and \$7.8 million for the years ended December 31, 2016 and 2015, respectively. Revenues include surcharges, which increase both revenues and operating expenses by corresponding amounts, thus having no net earnings impact.

(2) Water and electric gross margins do not include depreciation and amortization, maintenance, administrative and general, property and other taxes, and other operation expenses.

The overall actual percentages for purchased water for the years ended December 31, 2016 and 2015 were 40% and 41%, respectively, as compared to the adopted percentages of 29% and 36%, respectively. The increase in the percentage of purchased water was due to several wells being temporarily out of service during 2016, resulting in an increase in purchased water as compared to pumped water.

Purchased water costs for the year ended December 31, 2016 increased to \$64.4 million as compared to \$62.7 million for the same period in 2015 primarily due to an increase of purchased water in the supply mix as a result of several wells being out of service, as well as an increase in wholesale water costs as compared to the year ended December 31, 2015.

For the year ended December 31, 2016, the cost of power purchased for pumping decreased to \$8.7 million as compared to \$9.0 million for the same period in 2015 primarily due to decreases in pumped water resulting from the increase in purchased water. Groundwater production assessments were \$15.0 million in 2016 as compared to \$13.6 million in 2015 due to higher assessment rates.

The water-supply-cost balancing account decreased \$18.4 million during the year ended December 31, 2016 as compared to the same period in 2015 due to higher incurred supply costs as compared to the authorized supply costs. The authorized supply costs reflect the lower adopted customer usage.

For the years ended December 31, 2016 and 2015, the cost of power purchased for resale to BVES's customers was \$10.4 million. A decrease of 4% in customer usage for the year ended December 31, 2016 as compared to 2015 was offset by an increase in the average price per MWh. The average price per MWh, including fixed costs, increased from \$68.21 per MWh for the year ended December 31, 2015 to \$69.54 per MWh for the same period in 2016. The electric-supply-cost balancing account included in total supply costs decreased by \$1.6 million primarily due to the 2015 termination of supply cost surcharges, which have no impact on pretax operating income.

Other Operation

For the years ended December 31, 2016 and 2015, other operation expenses by business segment consisted of the following amounts (in thousands):

| | Year Ended 12/31/2016 | Year Ended 12/31/2015 | \$ CHANGE | % CHANGE |
|-----------------------|-----------------------------|-----------------------------|--------------|-------------|
| Water Services | \$ 21,649 | \$ 21,961 | \$ (312) | -1.4 % |
| Electric Services | 3,122 | 2,931 | 191 | 6.5 % |
| Contracted Services | 3,486 | 3,537 | (51) | -1.4 % |
| Total other operation | \$ 28,257 | \$ 28,429 | \$ (172) | -0.6 % |

Other operation expenses at the water segment decreased by \$312,000 during the year ended December 31, 2016 as compared to the same period in 2015 due primarily to lower conservation and drought-related costs incurred during 2016, partially offset by increases in water treatment costs. Higher conservation and drought-related costs were incurred in 2015 in response to the governor of California's 2015 executive order mandating reductions in water usage. Incremental drought-related costs were being expensed until recovery was approved by the CPUC in February 2017. Accordingly, GSWC reflected the approval during the first quarter of 2017 mostly as a reduction to operation-related expenses.

The increase in other operation expenses at the electric segment was due to outside services costs and labor costs incurred in response to power outages caused by severe winter storms experienced in January 2016.

Administrative and General

For the years ended December 31, 2016 and 2015, administrative and general expenses by business segment, including AWR (parent), consisted of the following amounts (in thousands):

| | Year Ended 12/31/2016 | Year Ended 12/31/2015 | \$ CHANGE | % CHANGE |
|----------------------------------|-----------------------------|-----------------------------|--------------|-------------|
| Water Services | \$ 56,165 | \$ 55,977 | \$ 188 | 0.3 % |
| Electric Services | 7,901 | 8,900 | (999) | -11.2 % |
| Contracted Services | 16,909 | 14,929 | 1,980 | 13.3 % |
| AWR (parent) | 19 | 11 | 8 | 72.7 % |
| Total administrative and general | \$ 80,994 | \$ 79,817 | \$ 1,177 | 1.5 % |

For the year ended December 31, 2016, administrative and general expenses at the water segment increased overall due, in large part, to an increase of approximately \$4.0 million in legal and other outside service costs incurred on condemnation-related matters. The increase in these outside services was mostly offset by decreases in pension costs, transportation-related expenses, and a higher allocation of corporate headquarters costs to the contracted services segment. The decreases in these expenses were also reflected in the adopted water revenue requirement.

For the year ended December 31, 2016, administrative and general expenses for the electric segment decreased by \$1.0 million as compared to the same period in 2015 due primarily to decreases in costs associated with the energy-efficiency and solar-initiative programs approved by the CPUC. The costs of these programs have been included in customer rates equally over the rate cycle. The spending of such funds had increased in 2015 due to the delay in receiving the final decision in November 2014 of the BVES rate case, which authorized these programs. There was also a lower allocation of administrative and general expenses to the electric segment from the corporate headquarters in 2016, as stipulated in the decision of the water general rate case.

For the year ended December 31, 2016, administrative and general expenses for contracted services increased by \$2.0 million due to (i) an increase of \$1.3 million in the allocation of administrative and general expenses from GSWC to the contracted services segment as stipulated in the final decision on the water general rate case, and (ii) increases in ASUS labor-related costs.

[Table of Contents](#)**Depreciation and Amortization**

For the years ended December 31, 2016 and 2015, depreciation and amortization expense by segment consisted of the following amounts (in thousands):

| | Year Ended 12/31/2016 | Year Ended 12/31/2015 | \$ CHANGE | % CHANGE |
|-------------------------------------|-----------------------------|-----------------------------|-------------------|-------------|
| Water Services | \$ 35,777 | \$ 39,190 | \$ (3,413) | -8.7 % |
| Electric Services | 2,027 | 1,703 | 324 | 19.0 % |
| Contracted Services | 1,046 | 1,140 | (94) | -8.2 % |
| Total depreciation and amortization | <u>\$ 38,850</u> | <u>\$ 42,033</u> | <u>\$ (3,183)</u> | -7.6 % |

For the year ended December 31, 2016, depreciation and amortization expense for the water segment decreased by \$3.4 million due to lower composite depreciation rates used in 2016 resulting from an updated depreciation study in the water general rate case. This decrease was partially offset by depreciation on additions to utility plant during 2016. The lower net depreciation expense has been reflected in the newly adopted water revenue requirement.

For the year ended December 31, 2016, depreciation and amortization expense for the electric segment increased primarily due to the impact of capital additions.

Maintenance

For the years ended December 31, 2016 and 2015, maintenance expense by segment consisted of the following amounts (in thousands):

| | Year Ended 12/31/2016 | Year Ended 12/31/2015 | \$ CHANGE | % CHANGE |
|---------------------|-----------------------------|-----------------------------|-----------------|-------------|
| Water Services | \$ 13,783 | \$ 13,935 | \$ (152) | -1.1 % |
| Electric Services | 736 | 758 | (22) | -2.9 % |
| Contracted Services | 1,951 | 2,192 | (241) | -11.0 % |
| Total maintenance | <u>\$ 16,470</u> | <u>\$ 16,885</u> | <u>\$ (415)</u> | -2.5 % |

Maintenance expense for contracted services decreased due primarily to (i) a decrease in labor costs associated with maintenance-related activities, and (ii) a decrease in outside services costs.

Property and Other Taxes

For the years ended December 31, 2016 and 2015, property and other taxes by segment, consisted of the following amounts (in thousands):

| | Year Ended 12/31/2016 | Year Ended 12/31/2015 | \$ CHANGE | % CHANGE |
|--------------------------------|-----------------------------|-----------------------------|---------------|-------------|
| Water Services | \$ 14,362 | \$ 14,250 | \$ 112 | 0.8 % |
| Electric Services | 1,082 | 994 | 88 | 8.9 % |
| Contracted Services | 1,357 | 1,392 | (35) | -2.5 % |
| Total property and other taxes | <u>\$ 16,801</u> | <u>\$ 16,636</u> | <u>\$ 165</u> | 1.0 % |

ASUS Construction

For the year ended December 31, 2016, construction expenses for contracted services were \$53.7 million, increasing by \$910,000 compared to the same period in 2015 due to increased construction activity as compared to 2015.

[Table of Contents](#)**Interest Expense**

For the years ended December 31, 2016 and 2015, interest expense by segment, including AWR (parent), consisted of the following amounts (in thousands):

| | Year Ended 12/31/2016 | Year Ended 12/31/2015 | \$ CHANGE | % CHANGE |
|------------------------|-----------------------------|-----------------------------|--------------|-------------|
| Water Services | \$ 20,430 | \$ 19,898 | \$ 532 | 2.7% |
| Electric Services | 1,352 | 1,100 | 252 | 22.9% |
| Contracted Services | 76 | 33 | 43 | 130.3% |
| AWR (parent) | 134 | 57 | 77 | 135.1% |
| Total interest expense | \$ 21,992 | \$ 21,088 | \$ 904 | 4.3% |

Overall, interest expense for the year ended December 31, 2016 increased by \$904,000 as compared to the same period in 2015 due, in part, to capitalized interest during the first quarter of 2015 at the water segment resulting from the recording of an allowance for funds used during construction in connection with the CPUC's approval of a filing for advice letter capital projects. There was no similar item during 2016. There was also an increase in interest expense due to higher borrowings on the revolving credit facility during 2016.

Interest Income

For the years ended December 31, 2016 and 2015, interest income by business segment, including AWR (parent), consisted of the following amounts (in thousands):

| | Year Ended 12/31/2016 | Year Ended 12/31/2015 | \$ CHANGE | % CHANGE |
|-----------------------|-----------------------------|-----------------------------|--------------|-------------|
| Water Services | \$ 734 | \$ 430 | \$ 304 | 70.7 % |
| Electric Services | 15 | 10 | 5 | 50.0 % |
| Contracted Services | 8 | 7 | 1 | 14.3 % |
| AWR (parent) | — | 11 | (11) | -100.0 % |
| Total interest income | \$ 757 | \$ 458 | \$ 299 | 65.3 % |

Interest income increased by \$299,000 for the year ended December 31, 2016 as compared to the same period in 2015 due primarily to higher interest accrued on regulatory assets as compared to the same period in 2015.

Other, net

For the year ended December 31, 2016, other income increased by \$641,000 primarily due to higher gains recorded on investments held for a retirement benefit plan resulting from market conditions as compared to 2015.

Income Tax Expense

For the years ended December 31, 2016 and 2015, income tax expense by segment, including AWR (parent), consisted of the following amounts (in thousands):

| | Year Ended 12/31/2016 | Year Ended 12/31/2015 | \$ CHANGE | % CHANGE |
|--------------------------|-----------------------------|-----------------------------|--------------|-------------|
| Water Services | \$ 25,894 | \$ 30,302 | \$ (4,408) | -14.5 % |
| Electric Services | 2,715 | 2,170 | 545 | 25.1 % |
| Contracted Services | 6,672 | 6,069 | 603 | 9.9 % |
| AWR (parent) | (546) | (810) | 264 | -32.6 % |
| Total income tax expense | \$ 34,735 | \$ 37,731 | \$ (2,996) | -7.9 % |

Consolidated income tax expense for the year ended December 31, 2016 decreased by \$3.0 million due primarily to a decrease in pretax income as well as a decrease in the overall ETR. AWR's ETR was 36.8% for the year ended December 31, 2016 as compared to 38.4% for the same period in 2015. The ETR for GSWC was 37.9% for 2016 as compared to 40.6% for 2015 due primarily to differences between book and taxable income that are treated as flow-through adjustments in accordance with regulatory requirements, and permanent differences such as deductions related to production activities. The decrease in GSWC's ETR was partially offset by an increase in the ETR at the contracted services segment, which was due mostly to higher state taxes, which vary among the jurisdictions in which it operates.

Critical Accounting Policies and Estimates

Critical accounting policies and estimates are those that are important to the portrayal of AWR's financial condition, results of operations and cash flows, and require the most difficult, subjective or complex judgments of AWR's management. The need to make estimates about the effect of items that are uncertain is what makes these judgments difficult, subjective and/or complex. Management makes subjective judgments about the accounting and regulatory treatment of many items. The following are accounting policies that are critical to the financial statements of AWR. For more information regarding the significant accounting policies of Registrant, see Note 1 of "Notes to Financial Statements" included in Part II, Item 8, in Financial Statements and Supplementary Data.

Accounting for Rate Regulation — Because Registrant operates extensively in a regulated business, it is subject to the authoritative guidance for accounting for the effects of certain types of regulation. Application of this guidance requires accounting for certain transactions in accordance with regulations adopted by the regulatory commissions of the states in which rate-regulated operations are conducted. Utility companies defer costs and credits on the balance sheet as regulatory assets and liabilities when it is probable that those costs and credits will be recognized in the ratemaking process in a period different from the period in which they would have been reflected in income by an unregulated company. These deferred regulatory assets and liabilities are then reflected in the income statement in the period in which the same amounts are reflected in the rates charged for service.

Regulation and the effects of regulatory accounting have the most significant impact on the financial statements of Registrant. When GSWC files for adjustments to rates, the capital assets, operating costs and other matters are subject to review, and disallowances may occur. In the event that a portion of the Registrant's operations is no longer subject to the accounting guidance for the effects of certain types of regulation, Registrant is required to write off related regulatory assets that are not specifically recoverable and determine if other assets might be impaired. If the CPUC determines that a portion of the Registrant's assets are not recoverable in customer rates, Registrant is required to determine if it has suffered an asset impairment that would require a write-down in the asset valuation. At December 31, 2017, the consolidated balance sheet included net regulatory assets of approximately \$2.0 million. Management continually evaluates the anticipated recovery, settlement or refund of regulatory assets, liabilities, and revenues subject to refund and will provide for allowances and/or reserves as necessary. In the event that Registrant's assessment as to the probability of the inclusion in the ratemaking process is incorrect, the associated regulatory asset or liability will be adjusted to reflect the change in assessment or the impact of regulatory approval of rates. Reviews by the CPUC may also result in additional regulatory liabilities to refund previously collected revenues to customers if the CPUC disallows costs included in the ratemaking process.

Registrant also reviews its utility plant in service for possible impairment in accordance with accounting guidance for regulated entities for abandonments and disallowances of plant costs.

Revenue Recognition — Effective January 1, 2018, GSWC will adopt Accounting Standard Update 2014-09, *Revenue from Contracts with Customers (Topic 606)* ("ASU 2014-09") issued by the Financial Accounting Standards Board. The adoption of this revenue guidance will not have a material impact on how Registrant recognizes revenue.

GSWC records water and electric utility operating revenues when the service is provided to customers. Operating revenues include unbilled revenues that are earned (i.e., the service has been provided) but not billed by the end of each accounting period. Unbilled revenues are calculated based on the number of days and total usage from each customer's most recent billing record that was billed prior to the end of the accounting period and is used to estimate unbilled consumption as of the year-end reporting period. Unbilled revenues are recorded for both monthly and bi-monthly customers.

The CPUC granted GSWC the authority to implement revenue decoupling mechanisms through the adoption of the WRAM and the BRRAM. With the adoption of these alternative revenue programs, GSWC adjusts revenues in the WRAM and BRRAM for the difference between what is billed to its regulated customers and that which is authorized by the CPUC. Alternative revenue programs such as the WRAM and BRRAM are outside the scope of ASU 2014-09.

As required by the accounting guidance for alternative revenue programs, GSWC is required to collect its WRAM and BRRAM balances within 24 months following the year in which they are recorded. The CPUC has set the recovery period for under-collected balances that are up to 15% of adopted annual revenues at 18 months or less. For net WRAM under-collected balances greater than 15%, the recovery period is 19 to 36 months. As a result of the accounting guidance and CPUC-adopted recovery periods, Registrant must estimate if any WRAM and BRRAM revenues will be collected beyond the 24-month requirement, which can affect the timing of when such revenues are recognized.

Revenues for ASUS's operations and maintenance contracts are recognized when services have been rendered to the U.S. government pursuant to 50-year contracts. Revenues from construction activities are recognized based on either the percentage-of-completion or cost-plus methods of accounting. In accordance with GAAP, revenue recognition under these methods requires management to estimate the progress toward completion on a contract in terms of efforts, such as costs incurred. This approach is used because management considers it to be the best available measure of progress on these contracts. Changes in job performance, job conditions, change orders and estimated profitability, including those arising from any contract penalty provisions, and final contract settlements may result in revisions to costs and income and are recognized in the period in which the revisions are determined. Unbilled receivables from the U.S. government represent amounts to be billed for construction work completed and/or for services rendered pursuant to the 50-year contracts with the U.S. government, which are not presently billable but which will be billed under the terms of the contracts.

Income Taxes — Registrant's income tax calculations require estimates due principally to the regulated nature of the operations of GSWC, the multiple states in which Registrant operates, and potential future tax rate changes. Registrant uses the asset and liability method of accounting for income taxes under which deferred tax assets and liabilities are recognized for future tax consequences attributable to differences between the financial statement carrying amounts of existing assets and liabilities and their respective tax bases. Deferred tax assets and liabilities are measured using enacted tax rates expected to apply to taxable income in the years in which these temporary differences are expected to be recovered or settled. As of December 31, 2017, Registrant's deferred tax assets and liabilities have been remeasured to reflect the reduction in the federal corporate tax rate from 35% to 21% as signed into law on December 22, 2017. Changes in regulatory treatment, or significant changes in tax-related estimates, assumptions or law, could have a material impact on the financial position and results of operations of Registrant.

As a regulated utility, GSWC treats certain temporary differences as flow-through adjustments in computing its income tax expense consistent with the income tax approach approved by the CPUC for ratemaking purposes. Flow-through adjustments increase or decrease tax expense in one period, with an offsetting decrease or increase occurring in another period. Giving effect to these temporary differences as flow-through adjustments typically results in a greater variance between the effective tax rate and the statutory federal income tax rate in any given period than would otherwise exist if GSWC were not required to account for its income taxes as a regulated enterprise. As of December 31, 2017, Registrant's total amount of unrecognized tax benefits was zero.

Pension Benefits — Registrant's pension benefit obligations and related costs are calculated using actuarial concepts within the framework of accounting guidance for employers' accounting for pensions and post-retirement benefits other than pensions. Two critical assumptions, the discount rate and the expected return on plan assets, are important elements of expense and/or liability measurement. We evaluate these critical assumptions annually. Other assumptions include employee demographic factors such as retirement patterns, mortality, turnover and rate of compensation increase. The discount rate enables Registrant to state expected future cash payments for benefits as a present value on the measurement date. The guideline for setting this rate is a high-quality, long-term corporate bond rate. Registrant's discount rates were determined by considering the average of pension yield curves constructed using a large population of high-quality corporate bonds. The resulting discount rates reflect the matching of plan liability cash flows to the yield curves. A lower discount rate increases the present value of benefit obligations and increases periodic pension expense. Conversely, a higher discount rate decreases the present value of benefit obligations and decreases periodic pension expense. To determine the expected long-term rate of return on the plan assets, Registrant considers the current and expected asset allocation, as well as historical and expected returns on each plan asset class. A lower expected rate of return on plan assets will increase pension expense. The long-term expected return on plan assets was 6.50% in 2017 and 7.00% in 2016 for the pension plan.

For the pension plan obligation, Registrant decreased the discount rate to 3.76% as of December 31, 2017 from 4.44% as of December 31, 2016 to reflect market interest-rate conditions at December 31, 2017. A hypothetical 25-basis point further decrease in the assumed discount rate would have increased total net periodic pension expense for 2017 by approximately \$742,000, or 18.0%, and would have increased the projected benefit obligation ("PBO") and accumulated benefit obligation ("ABO") at December 31, 2017 by a total of \$8.0 million, or 3.9%. A 25-basis point further decrease in the long-term return on pension plan asset assumption would have increased 2017 pension cost by approximately \$373,000, or 9.1%.

In addition, changes in the fair value of plan assets will impact future pension cost and the Plan's funded status. Volatile market conditions can affect the value of AWR's trust established to fund its future long-term pension benefits. Any reductions in the value of plan assets will result in increased future expense, an increase in the underfunded position and increased future contributions.

Previous CPUC decisions in the water and electric general rate cases have authorized GSWC to continue using a two-way balancing account to track differences between the forecasted annual pension expenses adopted in rates and the actual

annual expense to be recorded by GSWC in accordance with the accounting guidance for pension costs. As of December 31, 2017, GSWC has a \$1.7 million over-collection in the two-way pension balancing accounts, consisting of a \$588,000 over-collection related to the general office and water regions, and a \$1.1 million over-collection related to BVES.

Funding requirements for qualified defined benefit pension plans are determined by government regulations. In establishing the contribution amount, Registrant has considered the potential impact of funding-rule changes under the Pension Protection Act of 2006. Registrant contributes the minimum required contribution as determined by government regulations or the forecasted annual pension cost authorized by the CPUC and included in customer rates, whichever is higher. In accordance with this funding policy, for 2018 the pension contribution is expected to be approximately \$6.1 million. Any differences between the forecasted annual pension costs in rates and the actual pension costs are included in the two-way pension balancing accounts.

Additionally, our pension plan liabilities are sensitive to changes in interest rates. As interest rates decrease, thereby reducing returns, our liabilities increase, potentially increasing benefit expense and funding requirements. In addition, market factors can affect assumptions we use in determining funding requirements with respect to our pension plan. For example, a relatively modest change in our assumptions regarding discount rates can materially affect our calculation of funding requirements. To the extent that market data compels us to reduce the discount rate used in our assumptions, our benefit obligations could materially increase.

Changes in demographics, including increased numbers of retirees or increases in life expectancy assumptions may also increase the funding requirements of our obligations related to the pension and other postretirement benefit plans. Mortality assumptions are a critical component of benefit obligation amounts and a key factor in determining the expected length of time for annuity payments. Assuming no changes in actuarial assumptions or plan amendments, the costs over the long term are expected to decrease due to the closure of Registrant's defined benefit pension plan to new employees as of January 1, 2011. Employees hired or rehired after December 31, 2010 are eligible to participate in a defined contribution plan.

Liquidity and Capital Resources***AWR***

Registrant's regulated business is capital intensive and requires considerable capital resources. A portion of these capital resources is provided by internally generated cash flows from operations. AWR anticipates that interest expense will increase in future periods due to the need for additional external capital to fund its construction program, and as market interest rates increase. AWR believes that costs associated with capital used to fund construction at GSWC will continue to be recovered through water and electric rates charged to customers.

AWR funds its operating expenses and pays dividends on its outstanding Common Shares primarily through dividends from its wholly owned subsidiaries. The ability of GSWC to pay dividends to AWR is restricted by California law. Under these restrictions, approximately \$232.2 million was available for GSWC to pay dividends to AWR on December 31, 2017. Approximately \$62.0 million was available for ASUS to pay dividends to AWR as of December 31, 2017 to the extent that the subsidiaries of ASUS are able to pay dividends in that amount to ASUS under applicable state laws.

When necessary, Registrant obtains funds from external sources in the capital markets and through bank borrowings. Access to external financing on reasonable terms depends on the credit ratings of AWR and GSWC and current business conditions, including that of the water utility industry in general, as well as conditions in the debt and equity capital markets. AWR has access to a syndicated credit facility which expires in May 2018. Management expects to extend this facility prior to its expiration date. AWR borrows under this facility and provides funds to its subsidiaries, GSWC and ASUS, in support of their operations. Any amounts owed to AWR for borrowings under this facility are included in inter-company payables on GSWC's balance sheet. The interest rate charged to GSWC and ASUS is sufficient to cover AWR's interest cost under the credit facility. As of December 31, 2017, there were \$59.0 million of outstanding borrowings under this facility and \$6.3 million of letters of credit outstanding. As of December 31, 2017, AWR had \$84.7 million available to borrow under the credit facility.

In May 2017, Standard and Poor's Global Ratings ("S&P") reaffirmed an A+ credit rating with a stable outlook on both AWR and GSWC. S&P's debt ratings range from AAA (highest possible) to D (obligation is in default). In December 2017, Moody's Investors Service ("Moody's") affirmed its A2 rating with a revised rating outlook from stable to positive for GSWC. Securities ratings are not recommendations to buy, sell or hold a security and are subject to change or withdrawal at any time by the rating agencies. Registrant believes that AWR's sound capital structure and A+ credit rating, combined with its financial discipline, will enable AWR to access the debt and equity markets. However, unpredictable financial market conditions in the future may limit its access or impact the timing of when to access the market, in which case, Registrant may choose to temporarily reduce its capital spending. If needed, GSWC may issue long-term debt in the near future, depending on market conditions. It is anticipated that the proceeds from any such debt issuance would be used to pay down short-term borrowings and fund a portion of capital expenditures.

AWR's ability to pay cash dividends on its Common Shares outstanding depends primarily upon cash flows from its subsidiaries. AWR intends to continue paying quarterly cash dividends in the future, on or about March 1, June 1, September 1 and December 1, subject to earnings and financial conditions, regulatory requirements and such other factors as the Board of Directors may deem relevant. Registrant has paid dividends on its Common Shares for over 80 consecutive years. On January 30, 2018, AWR's Board of Directors approved a first quarter dividend of \$0.255 per share on AWR's Common Shares. Dividends on the Common Shares will be paid on March 1, 2018 to shareholders of record at the close of business on February 15, 2018.

Cash Flows from Operating Activities:

Cash flows from operating activities have generally provided sufficient cash to fund operating requirements, including a portion of construction expenditures at GSWC, construction expenses at ASUS, and pay dividends. Registrant's future cash flows from operating activities are expected to be affected by a number of factors, including utility regulation; changes in tax law; maintenance expenses; inflation; compliance with environmental, health and safety standards; production costs; customer growth; per customer usage of water and electricity; weather and seasonality; conservation efforts; compliance with local governmental requirements, including mandatory restrictions on water use; and required cash contributions to pension and post-retirement plans. Future cash flows from contracted services subsidiaries will depend on new business activities, existing operations, the construction of new and/or replacement infrastructure at military bases, timely economic price and equitable adjustment of prices and timely collection of payments from the U.S. government and other prime contractors operating at the military bases.

[Table of Contents](#)

As a result of the Tax Cuts and Jobs Act, the lower federal tax rate and the elimination of bonus depreciation is expected to reduce Registrant's cash flows from operating activities, and result in higher cost of capital from an increased need to raise debt and/or equity.

ASUS funds its operating expenses primarily through internal operating sources, which include U.S. government funding under 50-year contracts for operations and maintenance costs and construction activities, as well as investments by, or loans from, AWR. ASUS, in turn, provides funding to its subsidiaries. ASUS's subsidiaries may also from time to time provide funding to ASUS or its subsidiaries.

Cash flows from operating activities are primarily generated by net income, adjusted for non-cash expenses such as depreciation and amortization, and deferred income taxes. Cash generated by operations varies during the year. Net cash provided by operating activities was \$144.6 million for the year ended December 31, 2017 as compared to \$96.9 million for the year ended December 31, 2016, and \$95.1 million for the year ended December 31, 2015. There was an increase in operating cash flow for GSWC due to various CPUC-approved surcharges implemented during 2017 to recover previously incurred costs, as well as income tax refunds received in 2017. The increase in operating cash flow was also due to the timing of billing of and cash receipts for construction work at military bases during 2017. The billings (and cash receipts) for this construction work generally occur at completion of the work or in accordance with a billing schedule contractually agreed to with the U.S. government and/or other prime contractors. Thus, cash flow from construction-related activities may fluctuate from period to period with such fluctuations representing timing differences of when the work is being performed and when the cash is received for payment of the work. Changes in customer accounts receivable were due to higher balances outstanding resulting from CPUC-approved rate increases and surcharges. The timing of cash receipts and disbursements related to other working capital items also affected the change in net cash provided by operating activities.

The increase in operating cash flow during 2016 as compared to 2015 was due to surcharges collected during 2016 for the 2015 WRAM under-collection, as well as lower WRAM under-collections recorded during 2016. This was partially offset by a decrease in cash generated by ASUS due to the timing of billing and cash receipts for construction work at military bases, as well as retroactive revenues collected during the year ended December 31, 2015 as compared to 2016. The timing of cash receipts and disbursements related to other working capital items also affected the change in net cash provided by operating activities.

Cash Flows from Investing Activities:

Net cash used in investing activities was \$80.0 million for the year ended December 31, 2017 as compared to \$131.2 million used in 2016 and \$90.1 million used in 2015. Cash paid for capital expenditures in 2017 was partially offset by \$34.3 million in cash proceeds generated from the sale of GSWC's Ojai water system. Cash used for other investments consists primarily of cash invested in a trust for a retirement benefit plan.

The capital expenditures incurred in 2016 were higher than in 2015, which was consistent with GSWC's capital investment program approved in the water general rate case.

Registrant invests capital to provide essential services to its regulated customer base, and has an opportunity to earn a fair rate of return on investments in infrastructure. Registrant's infrastructure investment plan consists of both infrastructure renewal programs, where infrastructure is replaced, as needed, and major capital investment projects, where new water treatment and delivery facilities are constructed. GSWC may also be required from time to time to relocate existing infrastructure in order to accommodate local infrastructure improvement projects. Projected capital expenditures and other investments are subject to periodic review and revision.

Cash Flows from Financing Activities:

Registrant's financing activities include primarily: (i) the sale proceeds from the issuance of Common Shares and stock option exercises and the repurchase of Common Shares; (ii) the issuance and repayment of long-term debt and notes payable to banks; and (iii) the payment of dividends on Common Shares. In order to finance new infrastructure, Registrant also receives customer advances (net of refunds) for, and contributions in aid of construction. Short-term borrowings are used to fund capital expenditures until long-term financing is arranged.

Net cash used in financing activities was \$64.7 million for the year ended December 31, 2017 as compared to cash provided from financing activities of \$30.3 million and cash used of \$76.6 million for the same periods in 2016 and 2015, respectively. This decrease in cash from financing activities during 2017 was due to the use of the Ojai sale proceeds, as well as cash generated from operating activities, to repay a portion of short-term borrowings from Registrant's revolving credit facility during 2017.

The increase in cash provided by financing activities in 2016 as compared to 2015 was due to an increase in short-term borrowings under Registrant's revolving credit line during 2016. The borrowings were used to fund operations and a portion of capital expenditures during 2016. In addition, cash used in financing activities during 2015 was primarily related to the repurchase of AWR Common Shares as part of a stock repurchase program, which was completed in 2015.

GSWC

GSWC funds its operating expenses, payments on its debt, and dividends on its outstanding common shares and a portion of its construction expenditures through internal sources. Internal sources of cash flow are provided primarily by retention of a portion of earnings from operating activities. Internal cash generation is influenced by factors such as weather patterns, conservation efforts, environmental regulation, litigation, deferred taxes, changes in supply costs and regulatory decisions affecting GSWC's ability to recover these supply costs, timing of rate relief, increases in maintenance expenses and capital expenditures, surcharges authorized by the CPUC to enable GSWC to recover expenses previously incurred from customers and CPUC requirements to refund amounts previously charged to customers.

GSWC may, at times, utilize external sources, including equity investments and short-term borrowings from AWR, and long-term debt to help fund a portion of its construction expenditures. In addition, GSWC receives advances and contributions from customers, home builders and real estate developers to fund construction necessary to extend service to new areas. Advances for construction are generally refundable at a rate of 2.5% in equal annual installments over 40 years. Amounts which are no longer subject to refund are reclassified to contributions in aid of construction. Utility plant funded by advances and contributions is excluded from rate base. Generally, GSWC amortizes contributions in aid of construction at the same composite rate of depreciation for the related property.

As is often the case with public utilities, GSWC's current liabilities may at times exceed its current assets. Management believes that internally generated funds along with the proceeds from the issuance of long-term debt, borrowings from AWR and common share issuances to AWR will be adequate to provide sufficient capital to enable GSWC to maintain normal operations and to meet its capital and financing requirements pending recovery of costs in rates.

Cash Flows from Operating Activities:

Net cash provided by operating activities was \$129.6 million for the year ended December 31, 2017 as compared to \$101.3 million and \$97.5 million for the same periods in 2016 and 2015, respectively. There was an increase in operating cash flow for GSWC due to various CPUC-approved surcharges implemented during 2017 to recover previously incurred costs, as well as income tax refunds received in 2017. Changes in customer accounts receivable were due to higher balances outstanding resulting from CPUC-approved rate increases and surcharges. The timing of cash receipts and disbursements related to other working capital items also affected net cash provided by operating activities.

The increase in cash from operations in 2016 as compared to 2015 was due to surcharges collected during 2016 for the 2015 WRAM under-collection, as well as lower WRAM under-collections recorded during 2016. The timing of cash receipts and disbursements related to working capital items affected the change in net cash provided by operating activities.

Cash Flows from Investing Activities:

Net cash used in investing activities was \$77.4 million for the year ended December 31, 2017 as compared to \$129.3 million and \$89.0 million for the same periods in 2016 and 2015, respectively. Cash used for capital expenditures in 2017 was \$110.5 million, which was partially offset by cash proceeds received from the sale of GSWC's Ojai water system.

During the years ended December 31, 2017, 2016 and 2015, GSWC had capital expenditures of \$110.5 million, \$127.9 million and \$86.1 million, respectively. Capital expenditures incurred in 2017, 2016 and 2015 were consistent with GSWC's capital investment program. GSWC expects 2018 company-funded capital expenditures to be between \$110 and \$120 million.

GSWC has an interest-bearing note from AWR which expires in May 2018, whereby AWR may borrow up to \$40.0 million for working capital purposes. AWR expects to renew this note prior to May 2018. During 2015, AWR borrowed \$20.7 million from GSWC, all of which was repaid during 2015.

[Table of Contents](#)*Cash Flows from Financing Activities:*

Net cash used for financing activities was \$52.2 million for 2017 as compared to net cash provided of \$25.7 million and net cash used of \$50.0 million for 2016 and 2015, respectively. The decrease in cash from financing activities during 2017 was due to the use of the Ojai sale proceeds, as well as cash generated from operating activities, to repay a portion of inter-company short-term borrowings.

The increase in cash provided by financing activities in 2016 as compared to 2015 was due to proceeds from inter-company borrowings from AWR of \$49.5 million to fund operations and a portion of capital expenditures. There was also an increase in cash receipts from advances for, and contributions in aid of, construction as compared to 2015. In addition, GSWC paid higher dividends to AWR parent during 2015 to adjust GSWC's capital structure to the CPUC's adopted capital structure. These increases in cash used in financing activities were partially offset by proceeds from inter-company borrowings from AWR of \$12.0 million in 2015.

[Table of Contents](#)**Contractual Obligations, Commitments and Off-Balance-Sheet Arrangements**

Registrant has various contractual obligations which are recorded as liabilities in the consolidated financial statements. Other items, such as certain purchase commitments and operating leases are not recognized as liabilities in the consolidated financial statements, but are required to be disclosed. In addition to contractual maturities, Registrant has certain debt instruments that contain annual sinking funds or other principal payments. Registrant believes that it will be able to refinance debt instruments at their maturity through public issuance, or private placement, of debt or equity. Annual payments to service debt are generally made from cash flows from operations.

The following table reflects Registrant's contractual obligations and commitments to make future payments pursuant to contracts as of December 31, 2017. All obligations and commitments are obligations and commitments of GSWC unless otherwise noted.

| (\$ in thousands) | Payments/Commitments Due by Period (1) | | | | |
|---------------------------------------|--|------------------|------------------|------------------|-------------------|
| | Total | Less than 1 Year | 1-3 Years | 4-5 Years | After 5 Years |
| Notes/Debentures (2) | \$ 187,000 | \$ — | \$ — | \$ — | \$ 187,000 |
| Private Placement Notes (3) | 123,000 | — | 40,000 | — | 83,000 |
| Tax-Exempt Obligations (4) | 11,502 | 143 | 303 | 346 | 10,710 |
| Other Debt Instruments (5) | 3,763 | 181 | 363 | 409 | 2,810 |
| Total AWR Long-Term Debt | \$ 325,265 | \$ 324 | \$ 40,666 | \$ 755 | \$ 283,520 |
| Interest on Long-Term Debt (6) | \$ 275,825 | \$ 21,601 | \$ 38,296 | \$ 37,726 | \$ 178,202 |
| Advances for Construction (7) | 70,750 | 3,286 | 6,572 | 6,566 | 54,326 |
| Renewable Energy Credit Agreement (8) | 3,168 | 409 | 901 | 1,239 | 619 |
| Purchased Power Contracts (9) | 9,562 | 4,993 | 4,569 | — | — |
| Capital Expenditures (10) | 36,412 | 36,412 | — | — | — |
| Water Purchase Agreements (11) | 4,794 | 400 | 801 | 801 | 2,792 |
| Operating Leases (12) | 7,951 | 2,250 | 3,651 | 1,711 | 339 |
| Employer Contributions (13) | 16,142 | 6,100 | 6,899 | 3,143 | — |
| SUB-TOTAL | \$ 424,604 | \$ 75,451 | \$ 61,689 | \$ 51,186 | \$ 236,278 |
| Other Commitments (14) | 70,303 | | | | |
| TOTAL | \$ 820,172 | | | | |

(1) Excludes dividends and facility fees.

(2) The notes and debentures have been issued by GSWC under an Indenture dated September 1, 1993, as amended in December 2008. The notes and debentures do not contain any financial covenants that Registrant believes to be material or any cross-default provisions.

(3) GSWC issued private placement notes in 1991 in the amount of \$28 million pursuant to the terms of note purchase agreements with substantially similar terms. These agreements contain restrictions on the payment of dividends, minimum interest coverage requirements, a maximum debt-to-capitalization ratio and a negative pledge. Pursuant to the terms of these agreements, GSWC must maintain a minimum interest coverage ratio of two times interest expense. In addition, two senior notes in the amount of \$40 million each were issued by GSWC in October 2005 and in March 2009 to CoBank, ACB. A senior note in the amount of \$15 million was issued to The Prudential Insurance Company of America in December 2014. Under the terms of these senior notes, GSWC may not incur any additional debt or pay any distributions to its shareholders if, after giving effect thereto, it would have a debt to capitalization ratio in excess of 0.6667-to-1 or a debt to Earnings Before Interest, Taxes, Depreciation and Amortization ratio of more than 8-to-1. GSWC is in compliance with these covenant provisions as of December 31, 2017. GSWC does not currently have any outstanding mortgages or other liens on indebtedness on its properties.

(4) Consists of obligations at GSWC related to (i) a loan agreement supporting \$7.7 million in outstanding debt issued by the California Pollution Control Financing Authority, and (ii) \$3.8 million of obligations with respect to GSWC's 500 acre-foot entitlement to water from the State Water Project ("SWP"). These obligations do not contain any financial covenants

[Table of Contents](#)

believed to be material to Registrant or any cross-default provisions. In regard to its SWP entitlement, GSWC has entered into agreements with various developers for a portion of its 500 acre-foot entitlement to water from the SWP.

(5) Consists of (i) \$3.7 million outstanding representing the debt portion of funds received under the American Recovery and Reinvestment Act for reimbursements of capital costs related to the installation of meters for conversion of non-metered service to metered service in GSWC's Arden-Cordova District, and (ii) \$18,000 outstanding under a variable rate obligation of GSWC incurred to fund construction of water delivery facilities with the Three Valleys Municipal Water District. These obligations do not contain any financial covenants believed to be material to Registrant or any cross-default provisions.

(6) Consists of expected interest expense payments based on the assumption that GSWC's long-term debt remains outstanding until maturity. Current interest rates were used to estimate expected interest expense payments on variable-rate long-term debt.

(7) Advances for construction represent annual contract refunds by GSWC to developers for the cost of water systems paid for by the developers. The advances are generally refundable in equal annual installments over 40-year periods.

(8) Consists of an agreement by GSWC to purchase a total of 582,000 renewable energy credits through 2023. These renewable energy credits are used by GSWC's electric division to meet California's renewables portfolio standard.

(9) Consists of a fixed-cost purchased power contract effective January 1, 2015 between BVES and Shell Energy North America (US), L.P. and EDF Trading North America, LLC.

(10) Consists of capital expenditures estimated to be required under signed contracts at GSWC.

(11) Water purchase agreements consist of (i) a remaining amount of \$2.4 million under an agreement expiring in 2028 to lease water rights from a third party, and (ii) an aggregate amount of \$2.4 million of other water purchase commitments with other third parties which expire through 2038.

(12) Reflects future minimum payments under noncancelable operating leases for both GSWC and ASUS.

(13) Consists of expected contributions to Registrant's defined benefit pension plan for the years 2018 through 2021. Contribution to the pension plan are expected to be the higher of the minimum required contribution under the Employee Retirement Income Security Act ("ERISA") or the amounts that are recovered in customer rates and approved by the CPUC. These amounts are estimates and are subject to change based on, among other things, the limits established for federal tax deductibility (pension plan) and the significant impact that returns on plan assets and changes in discount rates have on such amounts.

(14) Other commitments consist primarily of (i) a \$150 million syndicated revolving credit facility, of which \$59.0 million was outstanding as of December 31, 2017, (ii) a \$5.0 million asset retirement obligation of GSWC that reflects the retirement of wells by GSWC, which by law need to be properly capped at the time of removal, (iii) an irrevocable letter of credit in the amount of \$340,000 for the deductible in Registrant's business automobile insurance policy, (iv) an irrevocable letter of credit issued on behalf of GSWC in the amount of \$585,000 as security for the purchase of power by BVES under an energy scheduling agreement with Automated Power Exchange, (v) \$5.4 million in letters of credit issued on behalf of GSWC related to funds received for reimbursement of capital costs related to the installation of meters for conversion of non-metered service to metered service in GSWC's Arden-Cordova district, and (vi) a \$15,000 irrevocable letter of credit issued on behalf of GSWC pursuant to a franchise agreement with the City of Rancho Cordova. All of the letters of credit are issued pursuant to the syndicated revolving credit facility. The syndicated revolving credit facility contains restrictions on prepayments, disposition of property, mergers, liens and negative pledges, indebtedness and guaranty obligations, transactions with affiliates, minimum interest coverage requirements, a maximum debt-to-capitalization ratio, and a minimum debt rating. Pursuant to the credit agreement, AWR must maintain a minimum interest coverage ratio of 3.25 times interest expense, a maximum total funded debt ratio of 0.65-to-1.00 and a minimum debt rating from Moody's or S&P of Baa3 or BBB-, respectively. As of December 31, 2017, AWR was in compliance with these covenants with an interest coverage ratio of 7.54 times interest expense, a debt ratio of 0.42-to-1.00 and debt ratings of A+ and A2.

Off-Balance-Sheet Arrangements

Registrant has various contractual obligations which are recorded as liabilities in the consolidated financial statements. Other items, such as certain purchase commitments and operating leases, are not recognized as liabilities in the consolidated financial statements, but are required to be disclosed. Except for those disclosed above in the table, Registrant does not have any other off-balance-sheet arrangements.

Effects of Inflation

The rates of GSWC are established to provide recovery of costs and a fair return on shareholders' investment. Recovery of the effects of inflation through higher water rates is dependent upon receiving adequate and timely rate increases. However, authorized rates charged to customers are usually based on a forecast of expenses and capital costs for GSWC. Rates may lag increases in costs caused by unanticipated inflation. During periods of moderate to low inflation, as has been experienced for the last several years, the effects of inflation on operating results have not been significant. Furthermore, the CPUC approves projections for a future test year in general rate cases which reduces the impact of inflation to the extent that GSWC's inflation forecasts are accurate.

For the Military Utility Privatization Subsidiaries, under the terms of the contracts with the U.S. government, the contract price is subject to an economic price adjustment on an annual basis. ASUS has experienced delays in some of its economic price adjustments. However, when adjustments are finalized, they are implemented retroactively to the effective date of the economic price adjustment.

Climate Change*Water:*

GSWC considers the potential impacts of climate change in its water supply portfolio planning and its overall infrastructure replacement plans. In addition, GSWC considers the impacts of greenhouse gas emissions and other environmental concerns in its operations and infrastructure investments.

Electric:

California has established a cap-and-trade program applicable to greenhouse gas emissions. While BVES's power-plant emissions are below the reporting threshold, as a "Covered Entity", BVES has an obligation to file a report in June of each year under the program.

California and the CPUC have established renewable-energy procurement requirement timelines. BVES has entered into a ten-year contract for renewable energy credits that was approved by the CPUC. As a result of this agreement, BVES believes it will be in compliance with both the CPUC's past renewable-energy-procurement requirements and future requirements through at least 2020. However, in addition to a forecasted increase in sales, California Senate Bill 350, passed in late 2015, included extending and increasing the renewable-energy procurement requirements beyond 2020. As a result, BVES is examining its renewable supply quantities to ensure continued compliance.

BVES is also required to comply with the CPUC's emission performance standards regarding greenhouse gas emissions. BVES must file an annual attestation with the CPUC stating that BVES is in compliance with these standards. Specifically, BVES must attest to having no new ownership investment in generation facilities or no long-term commitments for generation. In February 2018, BVES filed its annual attestation with the CPUC stating that BVES was in compliance with the emission performance standards for 2017.

At this time, management cannot estimate the impact, if any, that these regulations may have on the cost of BVES's power plant operations or the cost of BVES's purchased power from third-party providers.

BVES Power-Supply Arrangements

BVES began taking power effective January 1, 2015 at a fixed cost over three-and five-year terms depending on the amount of power and period during which the power is purchased under contracts approved by the CPUC in December 2014. In addition to the purchased power contracts, BVES buys additional energy to meet peak demand as needed and sells surplus power when necessary. The average cost of power purchased, including fixed costs and the transactions in the spot market, was approximately \$73.03 per MWh for the year ended December 31, 2017 as compared to \$69.54 per MWh for the same period of 2016. BVES's average energy costs are impacted by pricing fluctuations on the spot market. However, BVES has implemented an electric-supply-cost balancing account, as approved by the CPUC, to alleviate any impacts to earnings.

Construction Program

GSWC maintains an ongoing water distribution main replacement program throughout its customer service areas based on the age and type of distribution-system materials, priority of leaks detected, remaining productive life of the distribution system and an underlying replacement schedule. In addition, GSWC upgrades its electric and water supply facilities in accordance with industry standards, and local and CPUC requirements. As of December 31, 2017, GSWC has unconditional purchase obligations for capital projects of approximately \$36.4 million. During the years ended December 31, 2017, 2016 and 2015, GSWC had capital expenditures of \$115.3 million, \$126.0 million and \$95.5 million, respectively. A portion of these capital expenditures was funded by developers through advances, which must be repaid, or contributions in aid of construction, which are not required to be repaid. During the years ended December 31, 2017, 2016 and 2015, capital expenditures funded by developers were \$3.5 million, \$5.3 million and \$4.4 million, respectively. During 2018, GSWC's company-funded capital expenditures are estimated to be approximately \$110 - \$120 million.

Contracted Services

Under the terms of the current and future utility privatization contracts with the U.S. government, each contract's price is subject to an economic price adjustment ("EPA") on an annual basis. In the event that ASUS (i) is managing more assets at specific military bases than were included in the U.S. government's request for proposal, (ii) is managing assets that are in substandard condition as compared to what was disclosed in the request for proposal, (iii) prudently incurs costs not contemplated under the terms of the utility privatization contract, and/or (iv) becomes subject to new regulatory requirements, such as more stringent water-quality standards, ASUS is permitted to file, and has filed, requests for equitable adjustment ("REA"). The timely filing for and receipt of EPAs and/or REAs continues to be critical in order for the Military Utility Privatization Subsidiaries to recover increasing costs of operating and maintaining, and renewing and replacing the water and/or wastewater systems at the military bases it serves.

Under the Budget Control Act of 2011 (the "2011 Act"), substantial automatic spending cuts, known as "sequestration," have impacted the expected levels of Department of Defense budgeting. The Military Utility Privatization Subsidiaries have not experienced any earnings impact to their existing operations and maintenance and renewal and replacement services, as utility privatization contracts are an "excepted service" within the 2011 Act. While the ongoing effects of sequestration have been mitigated through the passage of a continuing resolution for the fiscal year 2018 Department of Defense budget, similar issues may arise as part of fiscal uncertainty and/or future debt-ceiling limits imposed by Congress. However, any future impact on ASUS and its operations through the Military Utility Privatization Subsidiaries will likely be limited to (a) the timing of funding to pay for services rendered, (b) delays in the processing of EPAs and/or REAs, (c) the timing of the issuance of contract modifications for new construction work not already funded by the U.S. government, and/or (d) delays in the solicitation for and/or awarding of new contracts under the Department of Defense utility privatization program.

At times, the DCAA and/or the DCMA may, at the request of a contracting officer, perform audits/reviews of contractors for compliance with certain government guidance and regulations, such as the Federal Acquisition Regulations and Defense Federal Acquisition Regulation Supplements. Certain audit/review findings, such as system deficiencies for government-contract-business-system requirements, may result in delays in the timing of resolution of filings submitted to and/or the ability to file new proposals with the U.S. government.

Below is a summary of current and projected EPA filings for price adjustments to operations and maintenance fees and renewal and replacement fees for the Military Utility Privatization Subsidiaries.

| Military Base | EPA period | Filing Date |
|---|-----------------------------|-----------------------|
| Fort Bliss (FBWS) | October 2017-September 2018 | Third Quarter 2017 |
| Andrews Air Force Base (TUS) | February 2018-January 2019 | Fourth Quarter 2017 |
| Fort Lee (ODUS) | February 2018-January 2019 | Fourth Quarter 2017 |
| Joint Base Langley Eustis and Joint Expeditionary Base Little Creek Fort Story (ODUS) | April 2018-March 2019 | First Quarter of 2018 |
| Fort Jackson (PSUS) | February 2018-January 2019 | Fourth Quarter 2017 |
| Fort Bragg (ONUS) | March 2018-February 2019 | Fourth Quarter 2017 |

ASUS assumed the operation of the water and wastewater systems at Eglin Air Force Base on June 15, 2017. The value of this contract is approximately \$702.4 million over its 50-year term.

New Privatization Contract Award:

On September 29, 2017, ASUS was awarded a new 50-year contract by the U.S. government to operate, maintain, and provide construction management services for the water distribution and wastewater collection and treatment facilities at Fort Riley, a United States Army installation located in Kansas. The initial value of the contract is approximately \$601.4 million over the 50-year period and is subject to annual economic price adjustments. This initial value is also subject to adjustment based on the results of a joint inventory of assets to be performed during the transition period. ASUS expects to assume operations at Fort Riley following the completion of a six- to twelve-month transition period currently underway.

Regulatory Matters***Certificates of Public Convenience and Necessity***

GSWC holds Certificates of Public Convenience and Necessity (“CPCN”) granted by the CPUC in each of the ratemaking areas it serves. ASUS is regulated, if applicable, by the state in which it primarily conducts water and/or wastewater operations. FBWS holds a CPCN from the Public Utilities Commission of Texas. The Virginia State Corporation Commission exercises jurisdiction over ODUS as a public service company. The Maryland Public Service Commission approved the right of TUS to operate as a water and wastewater utility at Joint Base Andrews, Maryland, based on certain conditions. The South Carolina Public Service Commission exercises jurisdiction over PSUS as a public service company. ONUS is regulated by the North Carolina Public Service Commission. ECUS is not subject to regulation by the Florida Public Service Commission. FRUS is not subject to regulation by the Kansas Corporation Commission.

Rate Regulation

GSWC is subject to regulation by the CPUC, which has broad authority over service and facilities, rates, classification of accounts, valuation of properties, the purchase, disposition and mortgaging of properties necessary or useful in rendering public utility service, the issuance of securities, the granting of certificates of public convenience and necessity as to the extension of services and facilities and various other matters.

Rates that GSWC is authorized to charge are determined by the CPUC in general rate cases and are derived using rate base, cost of service and cost of capital, as projected for a future test year. Rates charged to customers vary according to customer class and rate jurisdiction and are generally set at levels allowing for recovery of prudently incurred costs, including a fair return on rate base. Rate base generally consists of the original cost of utility plant in service, plus certain other assets, such as working capital and inventory, less accumulated depreciation on utility plant in service, deferred income tax liabilities and certain other deductions.

GSWC is required to file a water general rate case (“GRC”) application every three years according to a schedule established by the CPUC. GRCs typically include an increase in the first test year with inflation-rate adjustments for expenses for the second and third years of the GRC cycle. For capital projects, there are two test years. Rates are based on a forecast of expenses and capital costs for each test year. Electric GRCs are typically filed every four years.

Rates may also be increased by offsets for certain expense increases, including, but not limited to, supply-cost offset and balancing-account amortization, advice letter filings related to certain plant additions and other operating cost increases.

Neither the operations nor rates of AWR and ASUS are directly regulated by the CPUC. The CPUC does, however, regulate certain transactions between GSWC and ASUS and between GSWC and AWR.

Water Rates for 2018:

In January 2018, the CPUC approved third-year rate increases effective January 1, 2018. The new rates are expected to increase the adopted water gross margin in 2018 by approximately \$4.5 million as compared to the 2017 adopted margin, adjusted for Ojai's 2017 actual margin through June 8, 2017, the date on which the Ojai water system was sold.

Water Rates for 2016 and 2017:

In December 2016, the CPUC issued a decision in the water general rate case for GSWC. The 2016 rates approved by the CPUC in the decision were retroactive to January 1, 2016. However, because of the delay in issuing a decision, the CPUC ordered GSWC to bypass implementing 2016 rates and to implement 2017 rates after the correction of minor rate calculations in the December 2016 decision. The CPUC completed the corrections and subsequently issued a final decision in March 2017. In July 2017, GSWC filed with the CPUC for recovery of \$9.9 million in revenue shortfall, representing the net differences between the actual rates billed from January 2016 through April 2017 and the new rates adopted in the final decision. In September 2017, GSWC implemented surcharges to recover this revenue shortfall over 12- to 36-month amortization periods. The 2017 rates were effective retroactive to January 1, 2017 and increased the adopted margin by approximately \$3.3 million as compared to 2016.

Pending General Rate Case Filings:

In July 2017, GSWC filed a general rate case application for all of its water regions and the general office. This general rate case will determine new water rates for the years 2019, 2020 and 2021. Among other things, GSWC's requested capital budgets in this application average approximately \$125 million per year for the three-year rate cycle. A decision in the water general rate case is scheduled for the fourth quarter of 2018 with new rates to become effective January 1, 2019.

[Table of Contents](#)

On May 1, 2017, GSWC filed its electric general rate case application with the CPUC. This general rate case will determine new electric rates for the years 2018 through 2021. A final decision in the electric general rate case is expected in 2018, with rates effective retroactive to January 1, 2018.

Cost of Capital Proceeding for GSWC's Water Regions:

In early April 2017, GSWC filed its water cost of capital application with the CPUC in which it requested an overall weighted return on rate base of 9.11%, including an updated cost of debt of 6.6% and a return on equity ("ROE") of 11%. On February 6, 2018, GSWC, along with three other investor-owned water utilities that serve California, received a Proposed Decision from the CPUC issued in connection with the pending cost of capital proceeding. The Proposed Decision recommends an authorized ROE of 8.23% and a return on rate base of 7.39% for GSWC's water segment, effective January 1, 2018. GSWC's current authorized ROE for its water segment is 9.43% and its return on rate base is 8.34%. The Proposed Decision also continues the water cost of capital adjustment mechanism. If the CPUC adopts the recommendations in the Proposed Decision, the lower return on rate base is expected to decrease GSWC's annual revenue requirement by approximately \$9.5 million beginning in 2018. GSWC filed its comments on the Proposed Decision on February 26, 2018 with a final decision expected in late March 2018.

Tax Cuts and Jobs Act:

On December 22, 2017, the Tax Cuts and Jobs Act (the "Tax Act") was signed into federal law. The provisions of this major tax reform are generally effective January 1, 2018. Among its significant provisions, the Tax Act reduces the federal corporate tax rate from 35% to 21%. As a result of the Tax Act, in March 2018 GSWC intends to file updated testimony revising the revenue requirements and rate base in its pending water general rate case that will set new rates for the years 2019 - 2021, and in its pending electric general rate case that will set new rates for years 2018 - 2021. In addition, the CPUC's Water Division ordered water utilities to establish a memorandum account to track, effective January 1, 2018, the impact on the revenue requirements caused by changes in the tax rate and other potential tax code changes from the Tax Act. The impact to be included in this memorandum account is expected to generate a regulatory liability to be refunded to water customers at a later date. At this time, GSWC is unable to predict the timing of the CPUC decision in connection with such filings.

*Other Regulatory Matters**New Service Territory Application, Westborough Development, Sacramento County:*

On October 12, 2004, GSWC and Aerojet-General Corporation ("Aerojet") reached a settlement relating to groundwater contamination impacting GSWC's Arden-Cordova Water System. Portions of the settlement called for GSWC to serve new territory, subject to CPUC approval, on property owned by Aerojet known as Westborough. Aerojet and GSWC have been working cooperatively to identify and implement the best alternative to meet the long-term water supply needs of GSWC's Rancho Cordova customers within the Arden-Cordova service area. In August 2016, GSWC entered into agreements with Aerojet and Carmichael Water District (CWD) to provide GSWC with 5,000 acre-feet per year of treated water from CWD's Bajamont Water Treatment Plant for GSWC's Rancho Cordova customers within the Arden-Cordova service area. GSWC began taking delivery of this water in 2017. GSWC and Aerojet will continue to work cooperatively to identify the necessary water resources for the new Westborough development area owned by Aerojet. The County of Sacramento and the City of Folsom, through various arrangements, have agreed not to protest GSWC's application to the CPUC for a CPCN for this territory.

For more information regarding significant regulatory matters, see Note 2 of "Notes to Financial Statements" included in Part II, Item 8, in Financial Statements and Supplementary Data.

Environmental Matters

AWR's subsidiaries are subject to stringent environmental regulations, including the 1996 amendments to the Federal Safe Drinking Water Act. GSWC is required to comply with the safe drinking water standards established by the U.S. Environmental Protection Agency ("U.S. EPA") and the Division of Drinking Water ("DDW"), under the State Water Resources Control Board ("SWRCB"). The U.S. EPA regulates contaminants that may have adverse health effects that are known or likely to occur at levels of public health concern, and the regulation of which will provide a meaningful opportunity for health risk reduction. The DDW, acting on behalf of the U.S. EPA, administers the U.S. EPA's program in California. Similar state agencies administer these rules in the other states in which Registrant operates.

GSWC currently tests its water supplies and water systems according to, among other things, requirements listed in the Federal Safe Drinking Water Act ("SDWA"). GSWC works proactively with third parties and governmental agencies to address issues relating to known contamination threatening GSWC water sources. GSWC also incurs operating costs for testing to determine the levels, if any, of the constituents in its sources of supply and additional expense to treat contaminants in

order to meet the federal and state maximum contaminant level standards and consumer demands. GSWC expects to incur additional capital costs as well as increased operating costs to maintain or improve the quality of water delivered to its customers in light of anticipated stress on water resources associated with watershed and aquifer pollution, as well as to meet future water quality standards and consumer expectations. The CPUC ratemaking process provides GSWC with the opportunity to recover prudently incurred capital and operating costs in future filings associated with achieving water quality standards. Management believes that such incurred and expected future costs should be authorized for recovery by the CPUC.

Matters Relating to Environmental Cleanup

GSWC has been involved in environmental remediation and cleanup at a plant site (“Chadron Plant”) that contained an underground storage tank which was used to store gasoline for its vehicles. This tank was removed from the ground in July 1990 along with the dispenser and ancillary piping. Since then, GSWC has been involved in various remediation activities at this site.

As of December 31, 2017, the total spent to cleanup and remediate GSWC’s plant facility was approximately \$5.3 million, of which \$1.5 million has been paid by the State of California Underground Storage Tank Fund. Amounts paid by GSWC have been included in rate base and approved by the CPUC for recovery. As of December 31, 2017, GSWC has a regulatory asset and an accrued liability for the estimated additional cost of \$1.3 million to complete the cleanup at the site. The estimate includes costs for continued activities of groundwater cleanup and monitoring, future soil treatment, and site closure related activities. The ultimate cost may vary as there are many unknowns in remediation of underground gasoline spills and this is an estimate based on currently available information. Management also believes it is probable that the estimated additional costs will be approved for inclusion in rate base by the CPUC.

Matters Relating to Military Privatization Contracts

Each of the Military Utility Privatization Subsidiaries is responsible for testing the water and wastewater systems on the military bases on which it operates in accordance with applicable law.

Each of the Military Utility Privatization Subsidiaries has the right to seek an equitable adjustment to its contract in the event that there are changes in environmental laws, a change in the quality of water used in providing water service or wastewater discharged by the U.S. government or contamination of the air or soil not caused by the fault or negligence of the Military Utility Privatization Subsidiary. These changes can impact operations and maintenance and renewal and replacement costs under the contracts. The U.S. government is responsible for environmental contamination due to its fault or negligence and for environmental contamination that occurred prior to the execution of a contract.

Security Issues

GSWC has security systems and infrastructure in place intended to prevent unlawful intrusion, service disruption and cyber-attacks. GSWC utilizes a variety of physical security measures to protect its facilities. GSWC also considers advances in security and emergency preparedness technology and relevant industry developments in developing its capital-improvement plans. GSWC intends to seek approval of the CPUC to recover any additional costs that it incurs in enhancing the security, reliability and resiliency of its water systems.

The Military Utility Privatization Subsidiaries operate facilities within the boundaries of military bases which provide limited access to the general public. To further enhance security, in prior years, certain upgrades were completed at various military bases through contract modifications funded by the U.S. government.

Registrant has evaluated its cyber-security systems and continues to address identified areas of improvement with respect to U.S. government regulations regarding cyber-security of government contractors. These improvements include the physical security at all of the office and employee facilities it operates. Registrant was in compliance with these regulations by the mandated December 31, 2017 deadline.

Despite its efforts, Registrant cannot guarantee that intrusions, cyber-attacks or other attacks will not cause water or electric system problems, disrupt service to customers, compromise important data or systems or result in unintended release of customer or employee information.

California Drought

In April 2017, the Governor of California ended the drought state of emergency in most of California in response to significantly improved water supply conditions resulting from substantial rainfall and snowpack in late 2016 and early 2017. On the same date, the SWRCB and related state agencies released a plan to establish a framework for long-term water use efficiency standards. The plan includes continued bans on wasteful practices and outlines the SWRCB's vision for continued implementation of the Governor's executive order on water conservation. In November 2017, the SWRCB initiated a rulemaking to prohibit wasteful water use practices. It is anticipated the rulemaking will become final in the first quarter of 2018. The proposed permanent water use restrictions are similar to the emergency prohibitions on wasteful water uses that were in effect during the 2012 - 2017 drought.

California's recent period of drought resulted in reduced recharge to the state's groundwater basins. GSWC utilizes groundwater from numerous groundwater basins throughout the state. Several of these basins, especially smaller basins, experienced lower groundwater levels because of the drought. Several of GSWC's service areas rely on groundwater as their only source of supply. Given the critical nature of the groundwater levels in California's Central Coast area, GSWC implemented mandatory water restrictions in certain service areas, in accordance with CPUC procedures. In the event of water supply shortages beyond the locally available supply, GSWC would need to transport additional water from other areas, increasing the cost of water supply.

Precipitation during the 2016-2017 water year was considered a very wet year with rainfall in northern California being above normal levels. However, precipitation during December 2017 and early 2018 has been below average for much of California and may indicate less than normal rainfall for 2018. Should dry conditions persist through the remainder of 2018, areas served by these smaller basins may experience further mandatory conservation measures in the future.

As of February 20, 2018, the U.S. Drought Monitor estimated approximately 20 percent of California in the rank of "Severe Drought" while approximately 48 percent continued in the rank of "Moderate Drought". If dry conditions persist, the SWQCB or other regulatory agencies may impose emergency drought actions.

GSWC's Water Supply

During 2017, GSWC delivered approximately 62.2 million hundred cubic feet ("ccf") of water to its customers, which is an average of about 391 acre-feet per day (an acre-foot is approximately 435.6 ccf or 326,000 gallons). Approximately 55% of GSWC's supply came from groundwater production wells situated throughout GSWC's service areas. GSWC supplemented its groundwater production with wholesale purchases from Metropolitan Water District ("MWD") member agencies and regional water suppliers (roughly 42% of total demand) and with authorized diversions from rivers (roughly 3%) under contracts with the United States Bureau of Reclamation ("Bureau") and the Sacramento Municipal Utility District ("SMUD"). GSWC also utilizes recycled water supplies to serve recycled water customers in several service areas. During 2016, GSWC supplied 59.9 million ccf of water, approximately 55% of which was produced from groundwater sources and 45% was purchased from regional wholesalers and surface water diversions under contracts with the Bureau and SMUD. GSWC continually assesses its water rights and groundwater storage assets.

Groundwater

Over the years, population growth in GSWC's service areas and increases in the amount of groundwater used have resulted in both cooperative and judicially enforced regimes for owning water rights and managing groundwater basins for long-term sustainability. GSWC management actively participates in efforts to protect groundwater basins from over-use and from contamination and to protect its water rights. In some periods, these efforts require reductions in groundwater pumping and increased reliance on alternative water resources.

GSWC has a diverse water supply portfolio which includes approximately 73,600 acre-feet of adjudicated groundwater rights, surface water rights, and a number of unadjudicated water rights to help meet supply requirements. The productivity of GSWC's groundwater resources varies from year to year depending upon a variety of factors, including the amount, duration, length and location of rainfall, the availability of imported replenishment water, the amount of water previously stored in groundwater basins, the amount and seasonality of water use by GSWC's customers and others, evolving challenges to water quality, and a variety of legal limitations on use, if a groundwater basin is, or may be, in an overdrafted condition.

On September 16, 2014, the Governor of California signed a package of three bills, which taken together are known as the "Sustainable Groundwater Management Act." The purpose of the act is to provide local agencies with tools and authority to manage groundwater basins in a sustainable manner over the long term. Local "Groundwater Sustainability Agencies" are to be formed for each defined groundwater basin, and Groundwater Sustainability Plans must be completed for those basins by the year 2022 (by 2020 for those considered in critical overdraft). The act contains numerous provisions to protect existing water

rights, and is not anticipated to infringe upon or otherwise alter existing surface water or groundwater rights under current law. GSWC intends to cooperate to the fullest extent allowed in the development of these Groundwater Sustainability Agencies and resulting Groundwater Sustainability Plans to protect its interests in proper management of these groundwater basins.

Metropolitan Water District /State Water Project

Water supplies available to the MWD through the State Water Project ("SWP") vary from year to year based on several factors. Historically, weather was the primary factor in determining annual deliveries. However, biological opinions issued in late 2007 have limited water diversions through the Sacramento/San Joaquin Delta ("Delta") resulting in pumping restrictions on the SWP. Even with variable SWP deliveries, MWD has been able to provide sufficient quantities of water to satisfy the needs of its member agencies and their customers. Under its Integrated Resources Plan, MWD estimates that it can meet its member agencies' demands over at least the next 20 years.

Every year, the California Department of Water Resources ("DWR") establishes the SWP allocation for water deliveries to the state water contractors. The SWP is a major source of water for the MWD. DWR generally establishes a percentage allocation of delivery requests based on a number of factors, including weather patterns, snow-pack levels, reservoir levels and biological diversion restrictions. On November 30, 2017, DWR set an initial SWP delivery allocation at 15% of requests for the 2018 calendar year. This allocation will likely change depending on rain and snowfall received this winter.

Imported Water

GSWC also manages a portfolio of water supply arrangements with water wholesalers who may import water from outside the immediate service area. For example, GSWC has contracts with various governmental entities (principally MWD member agencies) and other parties to purchase water through a total of 62 connections for distribution to customers, in addition to numerous emergency connections. MWD is a public agency organized and managed to provide a supplemental, imported supply to its member public agencies. There are 26 such member agencies, consisting of 14 cities, 11 municipal water districts and one county water authority. GSWC has 46 connections to MWD's water distribution facilities and those of member agencies. GSWC purchases MWD water through six separate member agencies aggregating 56,166 acre-feet annually. MWD's principal source of water is the SWP and the Colorado River via the Colorado River Aqueduct.

GSWC has contracts to purchase water or water rights for an aggregate amount of \$4.8 million as of December 31, 2017. Included in the \$4.8 million is a remaining commitment of \$2.4 million under an agreement with the City of Claremont ("the City") to lease water rights that were ascribed to the City as part of the Six Basins adjudication. The initial term of the agreement expires in 2028. GSWC may exercise an option to renew this agreement for 10 additional years. The remaining \$2.4 million are for commitments for purchased water with other third parties which expire through 2038.

Potential Additional Sources of Supply

GSWC continues to assess additional water supply opportunities to expand and strengthen its water supply portfolio for service to customers. In June 2010, GSWC signed an agreement with Cadiz Inc. giving GSWC the right to acquire an annual supply of Cadiz water once Cadiz secures appropriate transport and conveyance facilities and necessary agreements to move water from Cadiz's property in Fenner Valley, San Bernardino County, to metropolitan Southern California. In addition, GSWC is actively pursuing participation in desalination proposals and various recycled water opportunities.

Military Utility Privatization Subsidiaries

The U.S. government is responsible for providing the source of supply for all water on each of the bases served by the Military Utility Privatization Subsidiaries at no cost to the Military Utility Privatization Subsidiaries. Once received from the U.S. government, ASUS is responsible for ensuring the continued compliance of the provided source of supply with all federal, state and local regulations.

New Accounting Pronouncements

Registrant is subject to newly issued requirements as well as changes in existing requirements issued by the Financial Accounting Standards Board. See *Note 1 of Notes to Consolidated Financial Statements*.

Item 7A. Quantitative and Qualitative Disclosures About Market Risk

Registrant is exposed to certain market risks, including fluctuations in interest rates, and commodity price risk primarily relating to changes in the market price of electricity. Market risk is the potential loss arising from adverse changes in prevailing market rates and prices.

Interest Rate Risk

A significant portion of Registrant's capital structure is comprised of fixed-rate debt. Market risk related to our fixed-rate debt is deemed to be the potential increase in fair value resulting from a decrease in interest rates. At December 31, 2017, the fair value of Registrant's long-term debt was \$424.0 million. A hypothetical ten percent decrease in market interest rates would have resulted in a \$14.0 million increase in the fair value of Registrant's long-term debt.

Market risk related to Registrant's variable-rate debt is estimated as the potential decrease in pretax earnings resulting from an increase in interest rates. As of December 31, 2017, Registrant had \$18,000 in variable-interest-rate debt outstanding. A hypothetical one percent rise in interest rates would not have a material impact on earnings.

At December 31, 2017, Registrant did not believe that its short-term debt was subject to interest-rate risk due to the fair market value being approximately equal to the carrying value.

Commodity/Derivative Risk

GSWC's electric division, BVES, is exposed to commodity price risk primarily relating to changes in the market price of electricity. To manage its exposure to energy price risk, BVES from time to time executes purchased power contracts that qualify as derivative instruments, requiring mark-to-market derivative accounting under the accounting guidance for derivatives. A derivative financial instrument or other contract derives its value from another investment or designated benchmark.

In December 2014, the CPUC approved an application, which allowed BVES to execute long-term purchased power contracts with energy providers, which became effective on January 1, 2015. BVES began taking power under these long-term contracts at a fixed cost over three- and five-year terms depending on the amount of power and period during which the power is purchased under the contracts.

The long-term contracts executed in December 2014 qualify for derivative accounting treatment. Among other things, the CPUC approval in December 2014 also authorized BVES to establish a regulatory memorandum account to offset the mark-to-market entries required by the accounting guidance. Accordingly, all unrealized gains and losses generated from these purchased power contracts are deferred on a monthly basis into a non-interest bearing regulatory memorandum account that tracks the changes in fair value of the derivative throughout the term of the contract. As a result, the unrealized gains and losses on these contracts do not impact GSWC's earnings. The three-year term contract expired in 2017. As of December 31, 2017, there was a \$2.9 million unrealized loss in the memorandum account for the remaining purchased power contract as a result of a drop in energy prices since the execution of the contract.

Except as discussed above, Registrant has had no other derivative financial instruments, financial instruments with significant off-balance sheet risks or financial instruments with concentrations of credit risk.

Report of Independent Registered Public Accounting Firm

To the Board of Directors and Shareholders of American States Water Company

Opinions on the Financial Statements and Internal Control over Financial Reporting

We have audited the accompanying consolidated balance sheets and statements of capitalization of American States Water Company and its subsidiaries as of December 31, 2017 and 2016, and the related consolidated statements of income, changes in common shareholders' equity and cash flows for each of the three years in the period ended December 31, 2017, including the related notes and schedule of condensed financial information of American States Water Company for each of the three years in the period ended December 31, 2017 appearing under Item 15(a)(2) (collectively referred to as the "consolidated financial statements"). We also have audited the Company's internal control over financial reporting as of December 31, 2017, based on criteria established in *Internal Control - Integrated Framework* (2013) issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO).

In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the financial position of the Company as of December 31, 2017 and 2016, and the results of their operations and their cash flows for each of the three years in the period ended December 31, 2017 in conformity with accounting principles generally accepted in the United States of America. Also in our opinion, the Company maintained, in all material respects, effective internal control over financial reporting as of December 31, 2017, based on criteria established in *Internal Control - Integrated Framework* (2013) issued by the COSO.

Basis for Opinions

The Company's management is responsible for these consolidated financial statements, for maintaining effective internal control over financial reporting, and for its assessment of the effectiveness of internal control over financial reporting, included in Management's Report on Internal Control over Financial Reporting appearing under Item 9A. Our responsibility is to express opinions on the Company's consolidated financial statements and on the Company's internal control over financial reporting based on our audits. We are a public accounting firm registered with the Public Company Accounting Oversight Board (United States) ("PCAOB") and are required to be independent with respect to the Company in accordance with the U.S. federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission and the PCAOB.

We conducted our audits in accordance with the standards of the PCAOB. Those standards require that we plan and perform the audits to obtain reasonable assurance about whether the consolidated financial statements are free of material misstatement, whether due to error or fraud, and whether effective internal control over financial reporting was maintained in all material respects.

Our audits of the consolidated financial statements included performing procedures to assess the risks of material misstatement of the consolidated financial statements, whether due to error or fraud, and performing procedures that respond to those risks. Such procedures included examining, on a test basis, evidence regarding the amounts and disclosures in the consolidated financial statements. Our audits also included evaluating the accounting principles used and significant estimates made by management, as well as evaluating the overall presentation of the consolidated financial statements. Our audit of internal control over financial reporting included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, and testing and evaluating the design and operating effectiveness of internal control based on the assessed risk. Our audits also included performing such other procedures as we considered necessary in the circumstances. We believe that our audits provide a reasonable basis for our opinions.

Definition and Limitations of Internal Control over Financial Reporting

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (i) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (ii) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the

[Table of Contents](#)

company; and (iii) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

February 26, 2018

We have served as the Company's auditor since 2002.

Report of Independent Registered Public Accounting Firm

To the Board of Directors and Shareholder of Golden State Water Company

Opinion on the Financial Statements

We have audited the accompanying balance sheets and statements of capitalization of Golden State Water Company as of December 31, 2017 and 2016, and the related statements of income, changes in common shareholder's equity and cash flows for each of the three years in the period ended December 31, 2017, including the related notes (collectively referred to as the "financial statements"). In our opinion, the financial statements present fairly, in all material respects, the financial position of the Company as of December 31, 2017 and 2016, and the results of its operations and its cash flows for each of the three years in the period ended December 31, 2017 in conformity with accounting principles generally accepted in the United States of America.

Basis for Opinion

These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on the Company's financial statements based on our audits. We are a public accounting firm registered with the Public Company Accounting Oversight Board (United States) ("PCAOB") and are required to be independent with respect to the Company in accordance with the U.S. federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission and the PCAOB.

We conducted our audits of these financial statements in accordance with the standards of the PCAOB. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement, whether due to error or fraud. The Company is not required to have, nor were we engaged to perform, an audit of its internal control over financial reporting. As part of our audits we are required to obtain an understanding of internal control over financial reporting but not for the purpose of expressing an opinion on the effectiveness of the Company's internal control over financial reporting. Accordingly, we express no such opinion.

Our audits included performing procedures to assess the risks of material misstatement of the financial statements, whether due to error or fraud, and performing procedures that respond to those risks. Such procedures included examining, on a test basis, evidence regarding the amounts and disclosures in the financial statements. Our audits also included evaluating the accounting principles used and significant estimates made by management, as well as evaluating the overall presentation of the financial statements. We believe that our audits provide a reasonable basis for our opinion.

AMERICAN STATES WATER COMPANY AND SUBSIDIARIES
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

Note 1 — Summary of Significant Accounting Policies

Nature of Operations: American States Water Company (“AWR”) is the parent company of Golden State Water Company (“GSWC”) and American States Utility Services, Inc. (“ASUS”) (and its wholly owned subsidiaries, Fort Bliss Water Services Company (“FBWS”), Terrapin Utility Services, Inc. (“TUS”), Old Dominion Utility Services, Inc. (“ODUS”), Palmetto State Utility Services, Inc. (“PSUS”), Old North Utility Services, Inc. (“ONUS”), Emerald Coast Utility Services, Inc. (“ECUS”), and Fort Riley Utility Services, Inc. (“FRUS”). AWR and its subsidiaries may be collectively referred to as “Registrant” or “the Company.” The subsidiaries of ASUS are collectively referred to as the “Military Utility Privatization Subsidiaries.”

GSWC is a public utility engaged principally in the purchase, production, distribution and sale of water in California serving approximately 259,000 customers. GSWC also distributes electricity in several San Bernardino County mountain communities in California serving approximately 24,000 customers through its Bear Valley Electric Service (“BVES”) division. Although Registrant has a diversified base of residential, industrial and other customers, revenues derived from commercial and residential water customers accounted for approximately 90% of total water revenues in 2017, 2016 and 2015. The California Public Utilities Commission (“CPUC”) regulates GSWC’s water and electric businesses in matters including properties, rates, services, facilities, and transactions by GSWC with its affiliates.

ASUS, through its Military Utility Privatization Subsidiaries, operates, maintains and performs construction activities (including renewal and replacement capital work) on water and/or wastewater systems at various U.S. military bases pursuant to 50-year firm fixed-price contracts. These contracts are subject to annual economic price adjustments and modifications for changes in circumstances, changes in laws and regulations and additions to the contract value for new construction of facilities at the military bases. In September 2017, ASUS was awarded a new 50-year contract by the U.S. government to operate, maintain, and provide construction management services for the water distribution and wastewater collection and treatment facilities at Fort Riley, a United States Army installation located in Kansas. The contract over the 50-year period is subject to annual economic price adjustments. ASUS expects to assume operations at Fort Riley following the completion of a six-to-twelve-month transition period currently underway.

There is no direct regulatory oversight by the CPUC over AWR or the operations, rates or services provided by ASUS or the Military Utility Privatization Subsidiaries.

Basis of Presentation: The consolidated financial statements and notes thereto are presented in a combined report filed by two separate Registrants: AWR and GSWC. References in this report to “Registrant” are to AWR and GSWC, collectively, unless otherwise specified.

AWR owns all of the outstanding Common Shares of GSWC and ASUS. ASUS owns all of the outstanding Common shares of the Military Utility Privatization Subsidiaries. The consolidated financial statements of AWR include the accounts of AWR and its subsidiaries. These financial statements are prepared in conformity with accounting principles generally accepted in the United States of America. Inter-company transactions and balances have been eliminated in the AWR consolidated financial statements.

Related-Party Transactions: GSWC and ASUS provide and/or receive various support services to and from their parent, AWR, and among themselves. GSWC also allocates certain corporate office administrative and general costs to its affiliate, ASUS, using allocation factors approved by the CPUC. During the years ended December 31, 2017, 2016 and 2015, GSWC allocated to ASUS approximately \$4.0 million, \$3.9 million and \$2.6 million, respectively, of corporate office administrative and general costs. In addition, AWR has a \$150.0 million syndicated credit facility, which expires in May 2018. Management intends to renew the credit facility prior to its expiration. AWR borrows under this facility and provides funds to its subsidiaries, including GSWC, in support of their operations. The interest rate charged to GSWC and ASUS is sufficient to cover AWR’s interest cost under the credit facility. Amounts owed to GSWC by AWR, including for allocated expenses, are included in GSWC’s inter-company receivables as of December 31, 2017 and 2016.

In October 2015, AWR issued interest-bearing promissory notes (the “Notes”) to GSWC and ASUS for \$40 million and \$10 million, respectively, which expire in May 2018. Under the terms of the Notes, AWR may borrow from GSWC and ASUS amounts up to \$40 million and \$10 million, respectively, for working capital purposes. AWR agrees to pay any unpaid principal amounts outstanding under these notes, plus accrued interest. As of December 31, 2017 and 2016, there were no amounts outstanding under these notes.

Utility Accounting: Registrant's accounting policies conform to accounting principles generally accepted in the United States of America ("U.S. GAAP"), including the accounting principles for rate-regulated enterprises, which reflect the ratemaking policies of the CPUC and the Federal Energy Regulatory Commission. GSWC has incurred various costs and received various credits reflected as regulatory assets and liabilities. Accounting for such costs and credits as regulatory assets and liabilities is in accordance with the guidance for accounting for the effects of certain types of regulation. This guidance sets forth the application of U.S. GAAP for those companies whose rates are established by or are subject to approval by an independent third-party regulator.

Under such accounting guidance, rate-regulated entities defer costs and credits on the balance sheet as regulatory assets and liabilities when it is probable that those costs and credits will be recognized in the ratemaking process in a period different from the period in which they would have been reflected in income by an unregulated company. These regulatory assets and liabilities are then recognized in the income statement in the period in which the same amounts are reflected in the rates charged for service. The amounts included as regulatory assets and liabilities that will be collected or refunded over a period exceeding one year are classified as long-term assets and liabilities as of December 31, 2017 and 2016.

Property and Depreciation: Registrant's property consists primarily of regulated utility plant at GSWC. GSWC capitalizes, as utility plant, the cost of construction and the cost of additions, betterments and replacements of retired units of property. Such cost includes labor, material and certain indirect charges. Water systems acquired are recorded at estimated original cost of utility plant when first devoted to utility service and the applicable depreciation is recorded to accumulated depreciation. The difference between the estimated original cost, less accumulated depreciation, and the purchase price, if recognized by the regulator, is recorded as an acquisition adjustment within utility plant.

Depreciation is computed on the straight-line, remaining-life basis, group method, in accordance with the applicable ratemaking process. GSWC's provision for depreciation expressed as a percentage of the aggregate depreciable asset balances was 2.6% for 2017, 2.9% for 2016, and 3.2% for 2015. Depreciation computed on GSWC's transportation equipment is recorded in other operating expenses and totaled \$242,000, \$259,000 and \$641,000 for the years ended December 31, 2017, 2016 and 2015, respectively. Expenditures for maintenance and repairs are expensed as incurred. Replaced or retired property costs, including cost of removal, are charged to the accumulated provision for depreciation.

Estimated useful lives of GSWC's utility plant, as authorized by the CPUC, are as follows:

| | |
|-------------------------------|----------------------|
| Source of water supply | 30 years to 50 years |
| Pumping | 25 years to 40 years |
| Water treatment | 20 years to 35 years |
| Transmission and distribution | 25 years to 55 years |
| Generation | 40 years |
| Other plant | 7 years to 40 years |

Non-regulated property consists primarily of equipment utilized by ASUS and its subsidiaries for its operations. This property is stated at cost, net of accumulated depreciation, which is calculated using the straight-line method over the useful lives of the assets.

Asset Retirement Obligations: GSWC has a legal obligation for the retirement of its wells, which by law need to be properly capped at the time of removal. As such, GSWC incurs asset retirement obligations. GSWC records the fair value of a liability for these asset retirement obligations in the period in which they are incurred. When the liability is initially recorded, GSWC capitalizes the cost by increasing the carrying amount of the related long-lived asset. Over time, the liability is accreted to its present value each period, and the capitalized cost is depreciated over the useful life of the related asset. Upon settlement of the liability, GSWC either settles the obligation for its recorded amount or incurs a gain or loss upon settlement. Retirement costs have historically been recovered through rates subsequent to the retirement costs being incurred. Accordingly, recoverability of GSWC's asset retirement obligations are reflected as a regulatory asset. GSWC also reflects the loss or gain at settlement as a regulatory asset or liability on the balance sheet.

With regards to removal costs associated with certain other long-lived assets, such as water mains, distribution and transmission assets, asset retirement obligations have not been recognized as GSWC believes that it will not be obligated to remove these assets. There are no CPUC rules or regulations that require GSWC to remove any of its other long-lived assets. In addition, GSWC's water pipelines are not subject to regulation by any federal regulatory agency. GSWC has franchise agreements with various municipalities in order to use the public right of way for utility purposes (i.e., operate water distribution and transmission assets), and if certain events occur in the future, GSWC could be required to remove or relocate

[Table of Contents](#)

certain of its pipelines. However, it is not possible to estimate an asset retirement amount since the timing and the amount of assets that may be required to be removed, if any, is not known.

Amounts recorded for asset retirement obligations are subject to various assumptions and determinations, such as determining whether a legal obligation exists to remove assets, estimating the fair value of the costs of removal, when final removal will occur and the credit-adjusted risk-free interest rates to be utilized on discounting future liabilities. Changes that may arise over time with regard to these assumptions will change amounts recorded in the future. Revisions in estimates for timing or estimated cash flows are recognized as changes in the carrying amount of the liability and the related capitalized asset. The estimated fair value of the costs of removal was based on third-party costs.

Impairment of Long-Lived Assets: Long-lived assets are reviewed for impairment whenever events or changes in circumstances indicate that the carrying amount of an asset may not be fully recoverable in accordance with accounting guidance for impairment or disposal of long-lived assets. Registrant would recognize an impairment loss on its regulated assets only if the carrying value amount of a long-lived asset is not recoverable from customer rates authorized by the CPUC. Impairment loss is measured as the excess of the carrying value over the amounts recovered in customer rates. For the years ended December 31, 2017, 2016 and 2015, no impairment loss was incurred.

Goodwill: At December 31, 2017 and 2016, AWR had approximately \$1.1 million of goodwill. The \$1.1 million goodwill arose from ASUS's acquisition of a subcontractor's business at some of the Military Utility Privatization Subsidiaries. In accordance with the accounting guidance for testing goodwill, AWR annually assesses qualitative factors to determine whether the existence of events or circumstances leads to a determination that it is more likely than not that the fair value of a reporting unit is less than its carrying amount. For 2017, AWR's assessment of qualitative factors did not indicate that an impairment had occurred for goodwill at ASUS.

Cash and Cash Equivalents: Cash and cash equivalents include short-term cash investments with an original maturity of three months or less. At times, cash and cash equivalent balances may be in excess of federally insured limits. Cash and cash equivalents are held with financial institutions with high credit standings.

Accounts Receivable: Accounts receivable is reported on the balance sheet net of any allowance for doubtful accounts. The allowance for doubtful accounts is Registrant's best estimate of the amount of probable credit losses in Registrant's existing accounts receivable from its water and electric customers, and is determined based on historical write-off experience and the aging of account balances. Registrant reviews the allowance for doubtful accounts quarterly. Account balances are written off against the allowance when it is probable the receivable will not be recovered. When utility customers request extended payment terms, credit is extended based on regulatory guidelines, and collateral is not required. Receivables from the U.S. government include amounts due under contracts with the U.S. government to operate and maintain, and/or provide construction services for the water and/or wastewater systems at military bases. Other accounts receivable consist primarily of amounts due from third parties (non-utility customers) for various reasons, including amounts due from contractors, amounts due under settlement agreements, amounts due from other third-party prime government contractors pursuant to agreements for construction of water and/or wastewater facilities for such third-party prime contractors. The allowance for these other accounts receivable is based on Registrant's evaluation of the receivable portfolio under current conditions and a review of specific problems and such other factors that, in Registrant's judgment, should be considered in estimating losses. Allowances for doubtful accounts are disclosed in Note 16.

Materials and Supplies: Materials and supplies are stated at the lower of cost or net realizable value. Cost is computed using average cost. Major classes of materials include pipe, hydrants and valves.

Interest: Interest incurred during the construction of capital assets has generally not been capitalized for financial reporting purposes as such policy is not followed in the ratemaking process. Interest expense is generally recovered through the regulatory process. However, the CPUC has authorized certain capital projects to be filed for revenue recovery with advice letters when those projects are completed. During the time that such projects are under development and construction, GSWC may accrue an allowance for funds used during construction ("AFUDC") on the incurred expenditures to offset the cost of financing project construction. For the year ended December 31, 2017, no AFUDC was recorded. For the years ended December 31, 2016 and 2015, GSWC recorded \$101,000 and \$694,000, respectively, of AFUDC related to capital projects based on a weighted cost of capital of 8.34% for water and a cost of debt of 6.96% for electric, as approved by the CPUC.

Water and Electric Operating Revenues: GSWC records water and electric utility operating revenues when the service is provided to customers. Revenues include amounts billed to customers on a cycle basis based on meter readings for services provided and unbilled revenues representing estimated amounts to be billed for usage from the last meter reading date to the end of the accounting period. Unbilled revenues are based on historical customer usage to estimate unbilled usage.

Alternative-Revenue Programs: As authorized by the CPUC, GSWC records in revenues the difference between the adopted level of volumetric revenues as authorized by the CPUC for metered accounts (volumetric revenues) and the actual volumetric revenues recovered in customer rates. If this difference results in an under-collection of revenues, GSWC records the additional revenue only to the extent that they are expected to be collected within 24 months following the year in which they are recorded in accordance with the accounting guidance for alternative-revenue programs.

Contracted Services Revenues: Revenues from ASUS contract operations and maintenance agreements are recognized on a monthly basis when services have been rendered to the U.S. government. Revenues for construction contracts are recognized based on the percentage-of-completion and cost-plus methods of accounting. In accordance with U.S. GAAP, revenue recognition under these methods requires ASUS to estimate the progress toward completion on a contract in terms of efforts such as costs incurred. This approach is used because management considers them to be the best available measure of progress on these contracts. Revenues from cost-plus contracts of ASUS are recognized on the basis of costs incurred during the period plus the profit earned, measured by the cost-to-cost method. Unbilled receivables from the U.S. government represent amounts to be billed for construction work completed and/or for services rendered pursuant to contracts with the U.S. government, which are not presently billable but which will be billed under the terms of those contracts.

Construction costs for ASUS include all direct material and labor costs charged by subcontractors, direct labor of employees of the Military Utility Privatization Subsidiaries, and those indirect costs related to contract performance, such as indirect labor, supplies, and tools. The factors considered in including such costs in revenues and expenses are that ASUS and/or the Military Utility Privatization Subsidiaries: (i) are the primary obligor in these arrangements with the U.S. government and the third-party prime contractors, (ii) have latitude in establishing pricing, and (iii) bear credit risk in the collection of receivables. Administrative and general costs are charged to expense as incurred. Precontract costs for ASUS, which consist of design and engineering labor costs, are deferred if they are probable of recovery and are expensed as incurred if they are not probable of recovery. Deferred precontract costs have been immaterial to date. Provisions for estimated losses on uncompleted contracts are made in the period in which such losses are determined.

Changes in job performance, job conditions, change orders and estimated profitability, including those arising from contract penalty provisions, and final contract settlements may result in revisions to costs and income for ASUS and are recognized in the period in which the revisions are determined.

The asset "Costs and estimated earnings in excess of billings on contracts" represents revenues recognized in excess of amounts billed. The liability "Billings in excess of costs and estimated earnings on contracts" represents billings in excess of revenues recognized. Amounts expected to be earned/collected in the next 12-months have been classified as current.

Debt Issuance Costs and Redemption Premiums: Original debt issuance costs are deducted from the carrying value of the associated debt liability and amortized over the lives of the respective issues. Premiums paid on the early redemption of debt, which is reacquired through refunding, are deferred and amortized over the life of the debt issued to finance the refunding as Registrant normally receives recovery of these costs in rates.

Advances for Construction and Contributions in Aid of Construction: Advances for construction represent amounts advanced by developers for the cost to construct water system facilities in order to extend water service to their properties. Advances are generally refundable in equal annual installments, generally over 40 years. In certain instances, GSWC makes refunds on these advances over a specific period of time based on operating revenues related to the main or as new customers are connected to receive service from the main. Contributions in aid of construction are similar to advances but require no refunding. Generally, GSWC depreciates contributed property and amortizes contributions in aid of construction at the composite rate of the related property. Utility plant funded by advances and contributions is excluded from rate base.

Fair Value of Financial Instruments: For cash and cash equivalents, accounts receivable, accounts payable and short-term debt, the carrying amount is assumed to approximate fair value due to the short-term nature of the amounts. The table below estimates the fair value of long-term debt issued by GSWC. Rates available to GSWC at December 31, 2017 and 2016 for debt with similar terms and remaining maturities were used to estimate fair value for long-term debt. Changes in the assumptions will produce differing results.

| (dollars in thousands) | 2017 | | 2016 | |
|-------------------------|-----------------|------------|-----------------|------------|
| | Carrying Amount | Fair Value | Carrying Amount | Fair Value |
| Long-term debt—GSWC (1) | \$ 325,265 | \$ 424,042 | \$ 325,582 | \$ 423,124 |

(1) Excludes debt issuance costs and redemption premiums.

The accounting guidance for fair value measurements applies to all financial assets and financial liabilities that are being measured and reported on a fair value basis. Under the accounting guidance, GSWC makes fair value measurements that are classified and disclosed in one of the following three categories:

Level 1: Unadjusted quoted prices in active markets that are accessible at the measurement date for identical, unrestricted assets or liabilities;

Level 2: Quoted prices in markets that are not active, or inputs which are observable, either directly or indirectly, for substantially the full term of the asset or liability; or

Level 3: Prices or valuation techniques that require inputs that are both significant to the fair value measurement and unobservable (i.e., supported by little or no market activity).

Publicly issued notes, private placement notes and other long-term debt are measured using current U.S. corporate bond yields for similar debt instruments and are classified as Level 2. The following table sets forth by level, within the fair value hierarchy, GSWC's long-term debt measured at fair value as of December 31, 2017:

| (dollars in thousands) | Level 1 | Level 2 | Level 3 | Total |
|------------------------|---------|------------|---------|------------|
| Long-term debt—GSWC | — | \$ 424,042 | — | \$ 424,042 |

Stock-Based Awards: AWR has issued stock-based awards to its employees under stock incentive plans. AWR has also issued stock-based awards to its Board of Directors under non-employee directors stock plans. Registrant applies the provisions in the accounting guidance for share-based payments in accounting for all of its stock-based awards. See Note 12 for further discussion.

Sales and Use Taxes: GSWC bills certain sales and use taxes levied by state or local governments to its customers. Included in these sales and use taxes are franchise fees, which GSWC pays to various municipalities (based on ordinances adopted by these municipalities) in order to use public rights of way for utility purposes. GSWC bills these franchise fees to its customers based on a CPUC-authorized rate for each rate-making area as applicable. These franchise fees, which are required to be paid regardless of GSWC's ability to collect them from its customers, are accounted for on a gross basis. GSWC's franchise fees billed to customers and recorded as operating revenue were approximately \$3.6 million, \$3.5 million and \$3.8 million for the years ended December 31, 2017, 2016 and 2015, respectively. When GSWC acts as an agent, and the tax is not required to be remitted if it is not collected from the customer, the taxes are accounted for on a net basis.

Depending on the state in which its subsidiary operations are conducted, ASUS is also subject to certain state non-income tax assessments generally computed on a "gross receipts" or "gross revenues" basis. These non-income tax assessments are required to be paid regardless of whether the subsidiary is reimbursed by the U.S. government for these assessments under its 50-year contracts, including modifications to these contracts. The non-income tax assessments are accounted for on a gross basis and totaled \$287,000, \$309,000 and \$367,000 during the years ended December 31, 2017, 2016 and 2015, respectively.

Recently Issued Accounting Pronouncements:

In March 2016, the Financial Accounting Standards Board ("FASB") issued Accounting Standard Update 2016-09, *Improvements to Employee Share-Based Payment Accounting*, which amends Accounting Standards Codification ("ASC") Topic 718, *Compensation - Stock Compensation*. Under the new guidance, the tax effects related to share-based payments at settlement (or expiration) are required to be recorded through the income statement rather than through equity, therefore increasing the volatility of income tax expense. The new standard also removed the requirement to delay recognition of a windfall tax benefit until an employer reduces its current taxes payable. It also permits entities to make an accounting policy election for the impact of forfeitures on the recognition of expense for share-based payment awards. Income tax benefits in excess of compensation costs or tax deficiencies for share-based compensation are recorded to the income tax provision, instead of to shareholders' equity, which can impact the effective tax rate. In addition, the excess tax benefits are classified as an operating activity along with other income tax cash flows on the statement of cash flows. Registrant adopted the new standard effective January 1, 2017 on a prospective basis and, therefore, all excess tax benefits resulting from share-based payments during the year ended December 31, 2017 were reflected in the income statements, which reduced income tax expense by approximately \$1,042,000 and \$1,011,000 for AWR and GSWC, respectively.

In May 2014, the FASB issued Accounting Standard Update 2014-09, *Revenue from Contracts with Customers (Topic 606)*. Under this guidance, an entity recognizes revenue when it transfers promised goods or services to customers in an amount that reflects what the entity expects in exchange for the goods or services. The guidance is effective for fiscal years, and interim periods within those years, beginning after December 15, 2017, and adoption is not permitted earlier than 2017. The guidance allows entities to select one of two methods of adoption, either the full retrospective approach, meaning the guidance would be applied to all periods presented, or modified retrospective approach, meaning the cumulative effect of applying the guidance to prior periods would be recognized as an adjustment to opening retained earnings at January 1, 2018, and requires certain additional disclosures. Registrant intends to use the modified retrospective approach beginning January 1, 2018. Registrant has completed its evaluation and has concluded that the adoption of this guidance will not have a material impact on its measurement or timing of revenue recognition. The guidance will also require enhanced disclosures, including a disaggregated revenue disclosure from contracts with customers. Some revenue arrangements which meet the definition of alternative revenue programs under ASC 980 *Regulated Operations*, such as GSWC's Water Revenue Adjustment Mechanism and Base Revenue Requirement Adjustment Mechanisms, are excluded from the scope of the new standard and, therefore, will be disclosed separately from the revenues of contracts with customers under the new guidance.

In March 2017, the FASB issued Accounting Standards Update 2017-07, *Compensation-Retirement Benefits (Topic 715): Improving the Presentation of Net Periodic Pension Cost and Net Periodic Postretirement Benefit Cost*, which changes the financial statement presentation for the costs of defined benefit pension plans and other retirement benefits. Under current U.S. GAAP, the components of net benefit cost for retirement plans (such as service cost, interest cost, expected return on assets, and the amortization of various deferred items), are aggregated as operating costs for financial statement presentation purposes. Under the new guidance, the service cost component will continue to be presented as operating costs, while all other components of net benefit cost will be presented outside of operating income. The new guidance also limits any capitalization of net periodic benefits cost to the service cost component. The new guidance is effective for annual and interim periods beginning after December 15, 2017, with early adoption permitted. Registrant does not expect adoption of this guidance to have a material impact on its consolidated financial statements. Registrant will adopt the new guidance beginning in 2018.

In August 2016, the FASB issued Accounting Standards Update 2016-15, *Statement of Cash Flows (Topic 230) Classification of Certain Cash Receipts and Cash Payments*, which is intended to reduce diversity in practice in how certain transactions are classified in the statement of cash flows. Registrant does not expect the adoption of this new guidance to have a significant impact on its cash flow statements. Registrant will adopt the new guidance beginning in 2018.

In February 2016, the FASB issued a new lease accounting standard, *Leases (ASC 842)*. Under the new standard, lessees will recognize a right-of-use asset and a lease liability for virtually all leases (other than leases that meet the definition of a short-term lease). For income statement purposes, leases will be classified as either operating or finance. Operating leases will result in straight-line expense while finance leases will result in a front-loaded expense pattern. The standard is effective for fiscal years, and interim periods within those fiscal years, beginning after December 15, 2018. Registrant will use the practical expedients available under this standard and will not reassess: (i) whether any expired or existing contracts are or contain leases, (ii) the lease classification for any expired or existing leases, and (iii) any initial direct costs for existing leases, if any. Management has not yet determined the effect of the standard on Registrant's financial statements. However, the ultimate impact of adopting this standard will depend on Registrant's lease portfolio as of the adoption date.

Note 2 — Regulatory Matters

In accordance with accounting principles for rate-regulated enterprises, Registrant records regulatory assets, which represent probable future recovery of costs from customers through the ratemaking process, and regulatory liabilities, which represent probable future refunds that are to be credited to customers through the ratemaking process. At December 31, 2017, Registrant had approximately \$59.1 million of regulatory liabilities, net of regulatory assets, not accruing carrying costs. Of this amount, (i) \$83.2 million of regulatory liabilities relates to the creation of an excess deferred income tax liability brought about by a lower federal income tax rate as a result of the Tax Cuts and Jobs Act (see Note 10) that is expected to be refunded to customers, (ii) \$17.7 million relates to flow-through deferred income taxes including the gross-up portion on the deferred tax resulting from the aforementioned excess deferred income tax regulatory liability (also see Note 10), (iii) \$34.7 million of regulatory assets relates to the underfunded position in Registrant's pension and other post-retirement obligations (not including the two-way pension balancing accounts), and (iv) \$2.9 million of regulatory assets relates to a memorandum account authorized by the CPUC to track unrealized gains and losses on BVES's purchase power contracts over the term of the contracts. The remainder relates to other items that do not provide for or incur carrying costs.

Regulatory assets represent costs incurred by GSWC for which it has received or expects to receive rate recovery in the future. In determining the probability of costs being recognized in other periods, GSWC considers regulatory rules and decisions, past practices, and other facts or circumstances that would indicate if recovery is probable. If the CPUC determines that a portion of GSWC's assets are not recoverable in customer rates, GSWC must determine if it has suffered an asset impairment that requires it to write down the asset's value. Regulatory assets are offset against regulatory liabilities within each rate-making area. Amounts expected to be collected or refunded in the next twelve months have been classified as current assets and current liabilities by rate-making area. Regulatory assets, less regulatory liabilities, included in the consolidated balance sheets are as follows:

| (dollars in thousands) | December 31, | |
|--|-----------------|-------------------|
| | 2017 | 2016 |
| GSWC | | |
| Water Revenue Adjustment Mechanism and Modified Cost Balancing Account | \$ 29,556 | \$ 47,340 |
| Costs deferred for future recovery on Aerojet case | 10,656 | 11,820 |
| Pensions and other post-retirement obligations (Note 11) | 33,019 | 28,118 |
| Derivative unrealized loss (Note 4) | 2,941 | 4,901 |
| Low income rate assistance balancing accounts | 5,972 | 8,272 |
| General rate case memorandum accounts | 10,522 | 13,929 |
| Other regulatory assets | 14,875 | 17,633 |
| Excess deferred income taxes (Note 10) | (83,231) | — |
| Flow-through taxes, net (Note 10) | (17,716) | 20,134 |
| Various refunds to customers | (4,552) | (5,866) |
| Total | <u>\$ 2,042</u> | <u>\$ 146,281</u> |

Alternative-Revenue Programs:

Under the Water Revenue Adjustment Mechanism ("WRAM"), GSWC records the difference between the adopted level of volumetric revenues as authorized by the CPUC for metered accounts (adopted volumetric revenues) and the actual volumetric revenues recovered in customer rates. While the WRAM tracks volumetric-based revenues, the revenue requirements approved by the CPUC include service charges, flat rate charges, and other items that are not subject to the WRAM. The adopted volumetric revenues consider the seasonality of consumption of water based upon historical averages. The variance between adopted volumetric revenues and actual billed volumetric revenues for metered accounts is recorded as a component of revenue with an offsetting entry to an asset or liability balancing account (tracked individually for each rate making area). The variance amount may be positive or negative and represents amounts that will be billed or refunded to customers in the future. The WRAM only applies to customer classes with conservation rates in place. The majority of GSWC's water customers have conservation rate structures.

Under the Modified Cost Balancing Account ("MCBA"), GSWC tracks adopted expense levels for purchased water, purchased power and pump taxes, as established by the CPUC. Variances (which include the effects of changes in both rate and volume) between adopted and actual purchased water, purchased power, and pump tax expenses are recorded as a component of the MCBA to be recovered from or refunded to GSWC's customers at a later date. This is reflected with an offsetting entry to an asset or liability balancing account (tracked individually for each rate-making area). Unlike the WRAM, the MCBA applies to all customer classes.

The recovery or refund of the WRAM is netted against the MCBA over- or under-collection for the corresponding rate-making area and bears interest at the current 90-day commercial-paper rate. During the year ended December 31, 2017, \$33.7 million of pre-2017 WRAM/MCBA balances were recovered. During 2017, GSWC recorded an additional \$15.4 million net under-collection in the WRAM/MCBA. The majority of this balance represents an under-collection of supply costs incurred and recorded in the MCBA due to a higher volume of purchased water as compared to adopted. As of December 31, 2017, GSWC had an aggregated regulatory asset of \$29.6 million, which is comprised of a \$5.6 million under-collection in the WRAM accounts and a \$24.0 million under-collection in the MCBA accounts. GSWC is expected to file with the CPUC for recovery of the 2017 WRAM/MCBA balances in March 2018.

As required by the accounting guidance for alternative revenue programs, GSWC is required to collect its WRAM balances within 24 months following the year in which an under-collection is recorded. The CPUC has set the recovery period for under-collected WRAM balances that are up to 15% of adopted annual revenues at 18 months or less. For under-collected balances greater than 15%, the recovery period is 19 to 36 months. The recovery periods for the majority of GSWC's WRAM/MCBA balances are primarily within 12 to 24 months; however, there were some ratemaking areas that had recovery periods greater than 24 months. Based on the current CPUC-stipulated recovery periods, as of December 31, 2015, GSWC estimated that approximately \$1.4 million of its 2015 WRAM under-collection would not be collected within 24 months as required for revenue recognition under the accounting guidance for alternative revenue programs. As a result, during the fourth quarter of 2015, GSWC did not record \$1.4 million of the 2015 WRAM under-collection balance as revenue. This amount was recognized as revenue when it was determined that it would be collected within 24 months. Approximately \$910,000 of the 2015 WRAM was recognized in 2016, and the remaining \$510,000 was recognized in 2017.

Costs Deferred for Future Recovery:

The CPUC authorized a memorandum account to allow for the recovery of costs incurred by GSWC related to contamination lawsuits brought against Aerojet-General Corporation ("Aerojet") and the state of California. In July 2005, the CPUC authorized GSWC to recover approximately \$21.3 million of the Aerojet litigation memorandum account, through a rate surcharge, which will continue for no longer than 20 years. Beginning in October 2005, a surcharge went into effect to begin amortizing the memorandum account over a 20-year period.

Aerojet also agreed to reimburse GSWC \$17.5 million, plus interest accruing from January 1, 2004, for GSWC's past legal and expert costs, which is included in the Aerojet litigation memorandum account. The reimbursement of the \$17.5 million is contingent upon the issuance of land use approvals for development in a defined area within Aerojet property in Eastern Sacramento County and the receipt of certain fees in connection with such development. It is management's intention to offset any proceeds from the housing development by Aerojet in this area against the balance in this litigation memorandum account. At this time, management believes the full balance of the Aerojet litigation memorandum account will be collected either from customers or Aerojet.

Pensions and Other Postretirement Obligations:

A regulatory asset has been recorded at December 31, 2017 and 2016 for the costs that would otherwise be charged to "other comprehensive income" within shareholders' equity for the underfunded status of Registrant's pension and other postretirement benefit plans because the cost of these plans has historically been recovered through rates. As discussed in Note 11, as of December 31, 2017, Registrant's underfunded position for these plans that have been recorded as a regulatory asset totaled \$34.7 million. Registrant expects this regulatory asset to be recovered through rates in future periods.

Previous CPUC decisions in the water and electric general rate cases have authorized GSWC to use a two-way balancing account to track differences between the forecasted annual pension expenses adopted in rates and the actual annual expense to be recorded by GSWC in accordance with the accounting guidance for pension costs. The two-way balancing accounts bear interest at the current 90-day commercial paper rate. As of December 31, 2017, GSWC has a net \$1.7 million over-collection in the two-way pension balancing accounts, consisting of a \$588,000 over-collection related to the general office and water regions, and a \$1.1 million over-collection related to BVES.

Low Income Balancing Accounts:

This regulatory asset reflects primarily the costs of implementing and administering the California Alternate Rates for Water program in GSWC's water regions and the California Alternate Rate for Energy program in GSWC's BVES division. These programs mandated by the CPUC provide a discount of a fixed dollar amount which is intended to represent a 15% discount based on a typical customer bill for qualified low-income water customers and 20% for qualified low-income electric customers. GSWC accrues interest on its low income balancing accounts at the prevailing rate for 90-day commercial paper. As of December 31, 2017, there is an aggregate \$6.0 million under-collection in the low income balancing accounts. Surcharges have been implemented to recover the costs included in these balancing accounts and are recalibrated in every water general rate case.

General Rate Case Memorandum Accounts:

The balance in the general rate case memorandum accounts represents the revenue differences between interim rates and final rates authorized by the CPUC due to delays in receiving decisions on various general rate case applications. On December 15, 2016, the CPUC issued a decision on GSWC's water general rate case, which set rates for the years 2016 - 2018. The rates approved by the CPUC were retroactive to January 1, 2016. As a result, as of December 31, 2016, GSWC added \$9.5 million to the general rate case memorandum accounts representing the rate difference between interim rates and final rates authorized by the CPUC, retroactive to January 1, 2016. As of December 31, 2017, there is a net aggregate \$10.5 million under-collection in these accounts, primarily related to the revenue difference between interim rates and final rates authorized by the CPUC in the December 2016 decision. GSWC has implemented surcharges ranging from 12 -36 months to collect the \$10.5 million balance.

Other Regulatory Assets:

Other regulatory assets represent costs incurred by GSWC for which it has received or expects to receive rate recovery in the future. These regulatory assets are supported by regulatory rules and decisions, past practices, and other facts or circumstances that indicate recovery is probable.

Other Regulatory Matters:**Renewables Portfolio Standard:**

BVES is subject to the renewables portfolio standard ("RPS") law, which requires meeting certain targets of purchases of energy from qualified renewable energy resources. In December 2012, GSWC entered into an agreement with a third party to purchase renewable energy credits ("RECs") whereby GSWC agreed to purchase approximately 582,000 RECs over a 10 -year period, which would be used towards meeting the CPUC's RPS procurement requirements. As of December 31, 2017, GSWC has purchased sufficient RECs to be in compliance for all periods through 2017. Accordingly, no provision for loss or potential penalties has been recorded in the financial statements as of December 31, 2017. GSWC intends to file its 2017 compliance report with the CPUC by the August 2018 deadline. The cost of these RECs has been included as part of the electric supply cost balancing account as of December 31, 2017.

In October 2015, the governor of California signed a bill into law requiring, among other things, electric utilities to generate half of their electricity from renewable energy sources by 2030. The new requirement is in addition to the existing requirement for electric utilities to generate one third of their electricity from renewable sources by 2020. BVES is assessing various renewable energy opportunities to be in compliance with these requirements.

Formal Complaint Filed with the CPUC

In June 2016, a third party filed a formal complaint with the CPUC against GSWC about a water main break that occurred in 2014 causing damage to a commercial building. Repairs to the building were delayed for a variety of reasons, including a dispute and litigation between two of GSWC's insurance carriers regarding their respective coverage obligations, as well as questions as to the nature and extent of the building's damage and the costs associated therewith. The complaint filed with the CPUC requested, among other things, that the CPUC investigate the main break, the damage to the commercial building and the delay of its repairs, and order GSWC to complete repairs immediately. In September 2017, the CPUC dismissed the complaint on the grounds that the CPUC lacks jurisdiction to impose monetary damages for injuries to property, as requested by the third party, and the third party lacks standing with respect to the property as it is not the owner of the damaged property.

Previously, the owners of the commercial building filed suit in Ventura County Superior Court against GSWC for damages to the building. In September 2017, the Ventura County Superior Court issued a statement of decision in favor of the plaintiffs, and awarded damages to the plaintiffs in the amount of \$2.6 million. Subsequently, the Court also awarded the plaintiffs' attorney fees and other costs. In December 2017, GSWC entered into settlement agreements with its insurance carriers, as well as with the owners of the commercial building, resolving all disputes. The final resolution of this matter resulted in GSWC recording an immaterial charge to expense during the fourth quarter of 2017.

[Table of Contents](#)**Note 3 — Utility Plant and Intangible Assets**

The following table shows Registrant's utility plant by major asset class:

| (dollars in thousands) | AWR December 31, | | GSWC December 31, | |
|---------------------------------|---------------------|---------------------|----------------------|---------------------|
| | 2017 | 2016 | 2017 | 2016 |
| Water | | | | |
| Land | \$ 14,895 | \$ 15,393 | \$ 14,895 | \$ 15,393 |
| Intangible assets | 29,396 | 36,291 | 29,378 | 36,273 |
| Source of water supply | 88,168 | 86,775 | 88,168 | 86,775 |
| Pumping | 178,252 | 169,983 | 178,252 | 169,983 |
| Water treatment | 78,999 | 74,980 | 78,999 | 74,980 |

| Less — accumulated depreciation | (533,370) | (532,753) | (524,481) | (524,927) |
| Construction work in progress | 63,835 | 63,354 | 63,486 | 61,810 |
| Net utility plant | <u>\$ 1,204,992</u> | <u>\$ 1,150,926</u> | <u>\$ 1,197,940</u> | <u>\$ 1,145,311</u> |

(1) Includes intangible assets of \$1.2 million for the years ended December 31, 2017 and 2016 for studies performed in association with the electricity segment of the Registrant's operations.

As of December 31, 2017 and 2016, intangible assets consist of the following:

| (dollars in thousands) | Weighted Average Amortization Period | AWR December 31, | | GSWC December 31, | |
|---|--|---------------------|-----------------|----------------------|-----------------|
| | | 2017 | 2016 | 2017 | 2016 |
| Intangible assets: | | | | | |
| Conservation programs | 3 years | \$ 9,486 | \$ 9,496 | \$ 9,486 | \$ 9,496 |
| Water and service rights (2) | 30 years | 8,695 | 8,695 | 8,124 | 8,124 |
| Water planning studies | 14 years | 13,011 | 19,487 | 13,011 | 19,487 |
| Total intangible assets | | <u>31,192</u> | <u>37,678</u> | <u>30,621</u> | <u>37,107</u> |
| Less — accumulated amortization | | (23,331) | (28,108) | (23,221) | (28,001) |
| Intangible assets, net of amortization | | <u>\$ 7,861</u> | <u>\$ 9,570</u> | <u>\$ 7,400</u> | <u>\$ 9,106</u> |
| Intangible assets not subject to amortization (3) | | <u>\$ 422</u> | <u>\$ 427</u> | <u>\$ 404</u> | <u>\$ 409</u> |

(2) Includes intangible assets of \$571,000 for contracted services included in "Other Property and Investments" on the consolidated balance sheets as of December 31, 2017 and 2016.

(3) The intangible assets not subject to amortization primarily consist of organization and consent fees.

[Table of Contents](#)

For the years ended December 31, 2017, 2016 and 2015, amortization of intangible assets was \$1.5 million, \$1.9 million and \$1.8 million, respectively, for both AWR and GSWC. Estimated future consolidated amortization expenses related to intangible assets for the succeeding five years are (in thousands):

| | Amortization Expense |
|-------|-------------------------|
| 2018 | \$ 1,325 |
| 2019 | 1,131 |
| 2020 | 1,003 |
| 2021 | 949 |
| 2022 | 949 |
| Total | <u>\$ 5,357</u> |

There is no material difference between the consolidated operations of AWR and the operations of GSWC in regard to the future amortization expense of intangible assets.

Asset Retirement Obligations:

The following is a reconciliation of the beginning and ending aggregate carrying amount of asset retirement obligations, which are included in "Other Credits" on the balance sheets as of December 31, 2017 and 2016:

| (dollars in thousands) | GSWC |
|---------------------------------|-----------------|
| Obligation at December 31, 2015 | \$ 4,157 |
| Additional liabilities incurred | 121 |
| Liabilities settled | (112) |
| Accretion | 227 |
| Obligation at December 31, 2016 | <u>\$ 4,393</u> |
| Additional liabilities incurred | 562 |
| Liabilities settled | (229) |
| Accretion | 237 |
| Obligation at December 31, 2017 | <u>\$ 4,963</u> |

Note 4 — Derivative Instruments

GSWC's electric division, BVES, purchases power under long-term contracts at a fixed cost depending on the amount of power and the period during which the power is purchased under such contracts. In December 2014, the CPUC approved an application that allowed BVES to enter into long-term purchased power contracts with energy providers, which BVES executed in December 2014. BVES began taking power under these long-term contracts effective January 1, 2015 at a fixed cost over three and five year terms depending on the amount of power and period during which the power is purchased under the contracts.

The long-term contracts executed in December 2014 are subject to the accounting guidance for derivatives and require mark-to-market derivative accounting. Among other things, the CPUC also authorized BVES to establish a regulatory asset and liability memorandum account to offset the mark-to-market entries required by the accounting guidance. Accordingly, all unrealized gains and losses generated from the purchased power contracts executed in December 2014 are deferred on a monthly basis into a non-interest bearing regulatory memorandum account that tracks the changes in fair value of the derivative throughout the term of the contract. As a result, these unrealized gains and losses do not impact GSWC's earnings. The three-year contract expired on December 31, 2017. As of December 31, 2017, there was a \$2.9 million unrealized loss in the memorandum account, with a corresponding unrealized loss liability for the five-year purchased power contract as a result of the fixed prices being greater than the futures energy prices. The notional volume of derivatives remaining under this long-term contract as of December 31, 2017 was approximately 201,000 megawatt hours.

As previously discussed in Note 1, the accounting guidance for fair value measurements establishes a framework for measuring fair value and requires fair value measurements to be classified and disclosed in one of three levels. Registrant's valuation model utilizes various inputs that include quoted market prices for energy over the duration of the contract. The market prices used to determine the fair value for this derivative instrument were estimated based on independent sources such as broker quotes and publications that are not observable in or corroborated by the market. Registrant received one broker quote to determine the fair value of its derivative instrument. When such inputs have a significant impact on the measurement

[Table of Contents](#)

of fair value, the instrument is categorized as Level 3. Accordingly, the valuation of the derivative on Registrant's purchased power contract has been classified as Level 3 for all periods presented. The following table presents changes in the fair value of GSWC's derivatives for the years ended December 31, 2017 and 2016:

| (dollars in thousands) | 2017 | 2016 |
|--|-------------------|-------------------|
| Balance, at beginning of the period | \$ (4,901) | \$ (7,053) |
| Unrealized gain on purchased power contracts | 1,960 | 2,152 |
| Balance, at end of the period | <u>\$ (2,941)</u> | <u>\$ (4,901)</u> |

Note 5 — Military Privatization

Each of the Military Utility Privatization Subsidiaries have entered into a service contract with the U.S. government to operate and maintain, as well as perform construction activities to renew and replace, the water and/or wastewater systems at a military base or bases. The amounts charged for these services are based upon the terms of the 50-year contract between ASUS or the Military Utility Privatization Subsidiaries and the U.S. government. Under the terms of each of these agreements, the Military Utility Privatization Subsidiaries agree to operate and maintain the water and/or wastewater systems for: (i) a monthly net fixed-price for operation and maintenance, and (ii) an amount to cover renewal and replacement capital work. In addition, these contracts may also include firm, fixed-priced initial capital upgrade projects to upgrade the existing infrastructure. Contract modifications are also issued for other necessary capital upgrades to the existing infrastructure approved by the U.S. government.

Under the terms of each of these contracts, prices are subject to an economic price adjustment ("EPA") provision, on an annual basis. Prices may also be equitably adjusted for changes in law and other circumstances. ASUS is permitted to file, and has filed, requests for equitable adjustment. Each of the contracts may be subject to termination, in whole or in part, prior to the end of the 50-year term for convenience of the U.S. government or as a result of default or nonperformance by the Military Utility Privatization Subsidiaries.

In September 2017, ASUS was awarded a new 50-year contract by the U.S. government to operate, maintain, and provide construction management services for the water distribution and wastewater collection and treatment facilities at Fort Riley, a United States Army installation located in Kansas. ASUS expects to assume operations at Fort Riley following the completion of a 6-to-12-month transition period currently underway. ASUS assumed the operation of the water and wastewater systems at Eglin Air Force Base on June 15, 2017.

ASUS has experienced delays in receiving EPAs as provided for under its 50-year contracts. Because of the delays, EPAs, when finally approved, are retroactive. During 2017, the U.S. government approved EPAs at five of the bases served. In some cases, these EPAs included retroactive operation and maintenance management fees for prior periods. In the second quarter of 2017, ASUS recorded approximately \$1.0 million in retroactive operation and maintenance management fees and pretax operating income related to periods prior to 2017. In December 2016, ASUS recorded approximately \$421,000 in retroactive operation and maintenance management fees and pretax operating income related to periods prior to 2016.

Costs and estimated earnings on contracts and amounts due from the U.S. government as of December 31, 2017 and 2016 are as follows:

| (dollars in thousands) | 2017 | 2016 |
|---|------------------|------------------|
| Revenues (costs and estimated earnings) recognized on contracts | \$ 78,245 | \$ 104,830 |
| Less: Billings to date on contracts | (15,343) | (43,161) |
| | <u>\$ 62,902</u> | <u>\$ 61,669</u> |

Included in the accompanying balance sheets under the following captions:

| | | |
|---|------------------|------------------|
| Costs and estimated earnings in excess of billings on contracts | \$ 66,813 | \$ 63,932 |
| Billings in excess of costs and estimated earnings on contracts | (3,911) | (2,263) |
| | <u>\$ 62,902</u> | <u>\$ 61,669</u> |

Receivables from the U.S. government:

| | | |
|---|------------------|------------------|
| Billed receivables from the U.S. government | \$ 3,725 | \$ 8,467 |
| Unbilled receivables from the U.S. government (current) | 7,559 | 6,691 |
| Total | <u>\$ 11,284</u> | <u>\$ 15,158</u> |

[Table of Contents](#)**Note 6 — Earnings Per Share and Capital Stock**

In accordance with the accounting guidance for participating securities and earnings per share (“EPS”), Registrant uses the “two-class” method of computing EPS. The “two-class” method is an earnings allocation formula that determines EPS for each class of common stock and participating security. AWR has participating securities related to restricted stock units that earn dividend equivalents on an equal basis with AWR’s Common Shares that have been issued under AWR’s 2000, 2008 and 2016 employee plans, and the 2003 and 2013 directors’ plans. In applying the “two-class” method, undistributed earnings are allocated to both common shares and participating securities.

The following is a reconciliation of Registrant’s net income and weighted average Common Shares outstanding for calculating basic net income per share:

| Basic: (in thousands, except per share amounts) | For The Years Ended December 31, | | |
|---|---|------------------|------------------|
| | 2017 | 2016 | 2015 |
| Net income | \$ 69,367 | \$ 59,743 | \$ 60,484 |
| Less: (a) Distributed earnings to common shareholders | 36,417 | 33,408 | 32,690 |
| Distributed earnings to participating securities | 197 | 187 | 207 |
| Undistributed earnings | 32,753 | 26,148 | 27,587 |
| (b) Undistributed earnings allocated to common shareholders | 32,577 | 26,003 | 27,414 |
| Undistributed earnings allocated to participating securities | 176 | 145 | 173 |
| Total income available to common shareholders, basic (a)+(b) | \$ 68,994 | \$ 59,411 | \$ 60,104 |
| Weighted average Common Shares outstanding, basic | 36,638 | 36,552 | 37,389 |
| Basic earnings per Common Share | \$ 1.88 | \$ 1.63 | \$ 1.61 |

Diluted EPS is based upon the weighted average number of Common Shares, including both outstanding shares and shares potentially issuable in connection with stock options and restricted stock units granted under AWR’s 2000, 2008 and 2016 employee plans, and the 2003 and 2013 directors’ plans, and net income. At December 31, 2017, there were 69,202 stock options outstanding under the 2000 and 2008 employee stock option plans. As of January 28, 2018, all stock options remaining outstanding under the 2000 plan were canceled in accordance with the terms of the 2000 plan. At December 31, 2017, there were also 205,166 restricted stock units outstanding including performance shares awarded to officers of the Registrant.

The following is a reconciliation of Registrant’s net income and weighted average Common Shares outstanding for calculating diluted net income per share:

| Diluted: (in thousands, except per share amounts) | For The Years Ended December 31, | | |
|--|---|------------------|------------------|
| | 2017 | 2016 | 2015 |
| Common shareholders earnings, basic | \$ 68,994 | \$ 59,411 | \$ 60,104 |
| Undistributed earnings for dilutive stock options and restricted stock units | 176 | 145 | 173 |
| Total common shareholders earnings, diluted | \$ 69,170 | \$ 59,556 | \$ 60,277 |
| Weighted average Common Shares outstanding, basic | 36,638 | 36,552 | 37,389 |
| Stock-based compensation (1) | 206 | 198 | 225 |
| Weighted average Common Shares outstanding, diluted | 36,844 | 36,750 | 37,614 |
| Diluted earnings per Common Share | \$ 1.88 | \$ 1.62 | \$ 1.60 |

(1) In applying the treasury stock method of reflecting the dilutive effect of outstanding stock-based compensation in the calculation of diluted EPS, 69,202 stock options and 205,166 restricted stock units, including performance awards, at December 31, 2017 were deemed to be outstanding in accordance with accounting guidance on earnings per share.

[Table of Contents](#)

During the years ended December 31, 2017, 2016 and 2015, AWR issued Common Shares totaling 56,498, 56,900 and 53,612, respectively, under AWR's employee stock incentive plans and the non-employee directors' plans. In addition, during the years ended December 31, 2017, 2016 and 2015, AWR issued 52,936, 12,546 and 66,458 Common Shares for approximately \$909,000, \$235,000 and \$1,198,000, respectively, as a result of the exercise of stock options. During 2017, 2016 and 2015, no cash proceeds received by AWR as a result of the exercise of stock options were distributed to any of AWR's subsidiaries. AWR has not issued any Common Shares during 2017, 2016 and 2015 under AWR's Common Share Purchase and Dividend Reinvestment Plan ("DRP") and the 401(k) Plan. Shares reserved for the 401(k) Plan are in relation to AWR's matching contributions and investment by participants. As of December 31, 2017, there were 1,055,948 and 387,300 Common Shares authorized for issuance directly by AWR but unissued under the DRP and the 401(k) Plan, respectively.

In 2014 and 2015, AWR's Board of Directors approved two stock repurchase programs, authorizing AWR to repurchase up to 2.45 million shares of its Common Shares. Both programs were completed during 2015. Under these programs, Registrant repurchased 1,905,000 Common Shares on the open market during 2015.

GSWC's outstanding Common Shares are owned entirely by its parent, AWR. To the extent GSWC does not reimburse AWR for stock-based compensation awarded under various stock compensation plans, such amounts increase the value of GSWC's common shareholder's equity.

Note 7 — Dividend Limitations

GSWC is subject to contractual restrictions on its ability to pay dividends. GSWC's maximum ability to pay dividends is restricted by certain Note Agreements to the sum of \$21.0 million plus 100% of consolidated net income from various dates plus the aggregate net cash proceeds received from capital stock offerings or other instruments convertible into capital stock from various dates. Under the most restrictive of the Note Agreements, \$400.8 million was available to pay dividends to AWR as of December 31, 2017. GSWC is also prohibited from paying dividends if, after giving effect to the dividend, its total indebtedness to capitalization ratio (as defined) would be more than 0.6667-to-1. Dividends in the amount of \$27.7 million, \$25.5 million and \$62.0 million were paid to AWR by GSWC during the years ended December 31, 2017, 2016 and 2015, respectively.

The ability of AWR, ASUS and GSWC to pay dividends is also restricted by California law. Under California law, AWR, GSWC and ASUS are each permitted to distribute dividends to its shareholders so long as the Board of Directors determines, in good faith, that either: (i) the value of the corporation's assets equals or exceeds the sum of its total liabilities immediately after the dividend, or (ii) its retained earnings equals or exceeds the amount of the distribution. Under the least restrictive of the California tests, approximately \$279.8 million was available to pay dividends to AWR's shareholders at December 31, 2017. Approximately \$232.2 million was available for GSWC to pay dividends to AWR at December 31, 2017. Approximately \$62.0 million was available for ASUS to pay dividends to AWR as of December 31, 2017 to the extent that the subsidiaries of ASUS are able to pay dividends in that amount to ASUS under applicable state laws.

Note 8 — Bank Debt

AWR has access to a \$150.0 million syndicated credit facility, which expires in May 2018. Management intends to renew the credit facility prior to its expiration. The aggregate effective amount that may be outstanding under letters of credit is \$25.0 million. AWR has obtained letters of credit, primarily for GSWC, in the aggregate amount of \$6.3 million, with fees of 0.65% including: (i) a \$5.4 million letter of credit related to American Recovery and Reinvestment Act funds received by GSWC for reimbursement of capital costs related to the installation of meters in GSWC's Arden-Cordova water system, (ii) letters of credit in an aggregate amount of \$340,000 as security for GSWC's business automobile insurance policy, (iii) a letter of credit, in an amount of \$585,000 as security for the purchase of power, and (iv) a \$15,000 irrevocable letter of credit pursuant to a franchise agreement with the City of Rancho Cordova. Letters of credit outstanding reduce the amount that may be borrowed under the revolving credit facility. AWR is not required to maintain any compensating balances.

Loans may be obtained under this credit facility at the option of AWR and bear interest at rates based on credit ratings and Euro rate margins. In May 2017, Standard and Poor's Global Ratings ("S&P") reaffirmed an A+ credit rating with a stable outlook on both AWR and GSWC. S&P's debt ratings range from AAA (highest rating possible) to D (obligation is in default). In December 2017, Moody's Investors Service ("Moody's") affirmed its A2 rating with a revised rating outlook from stable to positive for GSWC.

At December 31, 2017, there was \$59.0 million outstanding under this facility. At times, AWR borrows under this facility and provides loans to its subsidiaries in support of their operations, on terms that are similar to that of the credit facility.

AWR's short-term borrowing activities (excluding letters of credit) for the years ending December 31, 2017 and 2016 were as follows:

| (in thousands, except percent) | December 31, | |
|---------------------------------------|--------------|-----------|
| | 2017 | 2016 |
| Balance Outstanding at December 31, | \$ 59,000 | \$ 90,000 |
| Interest Rate at December 31, | 2.28% | 1.46% |
| Average Amount Outstanding | \$ 65,242 | \$ 59,261 |
| Weighted Average Annual Interest Rate | 1.69% | 1.20% |
| Maximum Amount Outstanding | \$ 102,500 | \$ 96,000 |

All of the letters of credit are issued pursuant to the syndicated revolving credit facility. The syndicated revolving credit facility contains restrictions on prepayments, disposition of property, mergers, liens and negative pledges, indebtedness and guaranty obligations, transactions with affiliates, minimum interest coverage requirements, a maximum debt to capitalization ratio and a minimum debt rating. Pursuant to the credit agreement, AWR must maintain a minimum interest coverage ratio of 3.25 times interest expense, a maximum total funded debt ratio of 0.65 to 1.00 and a minimum Moody's Investor Service or S&P debt rating of Baa3 or BBB-, respectively. As of December 31, 2017, 2016 and 2015, AWR was in compliance with these requirements. As of December 31, 2017, AWR had an interest coverage ratio of 7.54 times interest expense, a debt ratio of 0.42 to 1.00 and a debt rating of A+ by S&P.

Note 9 — Long-Term Debt

Registrant's long-term debt consists primarily of notes and debentures of GSWC. Registrant summarizes its long-term debt in the Statements of Capitalization. GSWC does not currently have any outstanding mortgages or other encumbrances on its properties. GSWC's leases and other similar financial arrangements are not material.

Each of the private placement notes issued by GSWC contain various restrictions. Private placement notes issued in the amount of \$28 million due in 2031 contain restrictions on the payment of dividends, minimum interest coverage requirements, a maximum total indebtedness to capitalization ratio and a negative pledge. Pursuant to the terms of these notes, GSWC must maintain a minimum interest coverage ratio of two times interest expense. As of December 31, 2017, GSWC had an interest coverage ratio of over four times interest expense.

In December 2014, GSWC issued \$15.0 million in 3.45% private placement senior notes due in 2029. In 2005 and 2009, GSWC issued two senior private placement notes to CoBank, ACB ("CoBank") due in 2028 and 2019, respectively. Pursuant to the terms of these three notes, GSWC must maintain a total indebtedness to capitalization ratio (as defined) of less than 0.6667-to-1 and a total indebtedness to earnings before income taxes, depreciation and amortization ("EBITDA") of less than 8-to-1. As of December 31, 2017, GSWC had a total indebtedness to capitalization ratio of 0.4332-to-1 and a total indebtedness to EBITDA of 2.5-to-1.

Certain long-term debt issues outstanding as of December 31, 2017 can be redeemed, in whole or in part, at the option of GSWC subject to redemption schedules embedded in the agreements particular to each redeemable issue. The 9.56% notes are subject to a make-whole premium based on 55 basis points above the applicable Treasury Yield if redeemed prior to 2021. After 2021, the maximum redemption premium is 3% of par value. The 5.87% and 6.7% senior notes with Co-Bank are subject to a make-whole premium based on the difference between Co-Bank's cost of funds on the date of purchase and Co-Bank's cost of funds on the date of redemption, plus 0.5%. The \$15.0 million, 3.45% senior notes due in 2029 have similar redemption premiums.

In October 2009, GSWC entered into an agreement with the California Department of Health ("CDPH") whereby CDPH agreed to provide funds to GSWC of up to \$9.0 million under the American Recovery and Reinvestment Act. Proceeds from the funds received were used to reimburse GSWC for capital costs incurred to install water meters to convert customers in GSWC's Arden-Cordova district from non-metered service to metered service. GSWC received a total of \$8.6 million in reimbursements from the CDPH, half of which was recorded as a contribution in aid of construction and the other half as long-term debt in accordance with the terms of the agreement. The loan portion bears interest at a rate of 2.5% and is payable over 20 years beginning in 2013. A surcharge to recover from customers the debt service cost on this loan was approved by the CPUC and implemented in 2013. Pursuant to the agreement, GSWC also issued letters of credit to CDPH in connection with this loan. As of December 31, 2017, GSWC has a total of \$5.4 million in letters of credit issued to CDPH.

Annual maturities of all long-term debt at December 31, 2017 are as follows (in thousands):

| | Maturity as of December 31, |
|------------|--------------------------------|
| 2018 | \$ 324 |
| 2019 | 40,321 |
| 2020 | 345 |
| 2021 | 366 |
| 2022 | 389 |
| Thereafter | 283,520 |
| Total | <u>\$ 325,265</u> |

Note 10 — Taxes on Income

Registrant records deferred income taxes for temporary differences pursuant to the accounting guidance that addresses items recognized for income tax purposes in a different period from when these items are reported in the financial statements. These items include differences in net asset basis (primarily related to differences in depreciation lives and methods, and differences in capitalization methods) and the treatment of certain regulatory balancing accounts and construction contributions and advances. The accounting guidance for income taxes requires that rate-regulated enterprises record deferred income taxes and offsetting regulatory liabilities and assets for temporary differences where the rate regulator has prescribed flow-through treatment for ratemaking purposes (Note 2). Deferred investment tax credits ("ITC") are amortized ratably to deferred tax expense over the remaining lives of the property that gave rise to these credits.

GSWC is included in both AWR's consolidated federal income tax and its combined California state franchise tax returns. The impact of California's unitary apportionment on the amount of AWR's California income tax liability is a function of both the profitability of AWR's non-California activities and the proportion of AWR's California sales to its total sales. GSWC's income tax expense is computed as if GSWC were autonomous and separately files its income tax returns, which is consistent with the method adopted by the CPUC in setting GSWC's customer rates.

The AWR and GSWC effective tax rates ("ETRs") differ from the federal statutory tax rate primarily due to state taxes, flow-through items, and permanent differences. As a regulated utility, GSWC treats certain temporary differences as flow-through in computing its income tax expense consistent with the income tax method used in its CPUC-jurisdiction ratemaking. Flow-through items either increase or decrease tax expense and thus impact the ETR.

On December 22, 2017, the Tax Cuts and Jobs Act (the "Tax Act") was signed into federal law. The provisions of this major tax reform are generally effective January 1, 2018. Among its significant provisions, the Tax Act (i) reduces the federal corporate income tax rate from 35% to 21%; (ii) eliminates bonus depreciation for regulated utilities, but allows 100% expensing for the cost of qualified property for non-regulated businesses; (iii) eliminates the provision that treated contributions in aid of construction provided to regulated water utilities as non-taxable; (iv) eliminates the domestic production activities deduction, and (v) limits the amount of net interest that can be deducted; however, this limitation is not applicable to regulated utilities and, therefore is not anticipated to have a material impact to Registrant's ability to deduct net interest.

Pursuant to ASC Topic 740, "Income Taxes", the effects of changes in tax laws must be recognized within the period in which the tax law is enacted. This required AWR and GSWC to record an adjustment in its 2017 financial statements to reflect the impact of the reduction in the corporate income tax rate from 35% to 21% on its cumulative deferred income-tax balances and its tax-related regulatory assets/liabilities. Registrant was able to make reasonable estimates in order to remeasure and account for the effects of the Tax Act, which are reflected in the December 31, 2017 financial statements. Any further technical corrections or other forms of guidance addressing the Tax Act, as well as regulatory or governmental actions, could result in adjustments to Registrant's remeasurement and accounting for the effects of the Tax Act. Registrant will finalize and record any adjustments related to the Tax Act within the one-year measurement period provided under Staff Accounting Bulletin No. 118 issued by the Securities and Exchange Commission in December 2017.

The most significant change from the Tax Act impacting Registrant is the reduction of the corporate federal income tax rate from 35% to 21% effective January 1, 2018. As of December 31, 2017, the cumulative net deferred income tax liabilities (for both flow-through and normalized temporary differences) related to GSWC's rate-regulated activities were reduced by approximately \$90.1 million to reflect the new 21% tax rate. However, this did not impact GSWC's earnings since this reduction in net deferred income tax liabilities was offset by a corresponding increase to a regulatory liability (Note 2). The impact to future customer rates related to this regulatory liability is anticipated to generally occur over a period consistent with the remaining lives of the property giving rise to this regulatory liability. The remeasurement of other deferred income tax balances not related to rate-regulated activities did not have a significant impact to Registrant's consolidated results of operations; however, income tax expense was affected among the reporting segments.

AWR and GSWC had no unrecognized tax benefits at December 31, 2017, 2016 and 2015.

Registrant's policy is to classify interest on income tax over/underpayments in interest income/expense and penalties in "other operating expenses." Registrant did not have any material interest receivables/payables from/to taxing authorities as of December 31, 2017 and 2016, nor did it recognize any material interest income/expense or accrue any material tax-related penalties during the years ended December 31, 2017, 2016 and 2015.

Registrant files federal, California and various other state income tax returns. The Internal Revenue Service ("IRS") completed its examination of AWR's federal 2010 through 2012 refund claims in February 2016 and issued a refund to AWR of approximately \$2.1 million. AWR's 2014 - 2016 tax years remain subject to examination by the IRS. AWR filed refund claims with the California Franchise Tax Board ("FTB") for the 2002 through 2008 tax years in connection with the matters reflected on the federal refund claims along with other state tax items. In the first quarter of 2017, the FTB issued a refund to AWR for the 2002 - 2004 claims of approximately \$2.2 million. The FTB continues to review the 2005 - 2008 refund claims. The 2009 - 2016 tax years remain subject to examination by the FTB.

Note 11 — Employee Benefit Plans***Pension and Post-Retirement Medical Plans:***

Registrant maintains a defined benefit pension plan (the “Pension Plan”) that provides eligible employees (those aged 21 and older, hired before January 1, 2011) monthly benefits upon retirement based on average salaries and length of service. The eligibility requirement to begin receiving these benefits is 5 years of vested service. The normal retirement benefit is equal to 2% of the five highest consecutive years’ average earnings multiplied by the number of years of credited service, up to a maximum of 40, reduced by a percentage of primary social security benefits. There is also an early retirement option. Annual contributions are made to the Pension Plan, which comply with the funding requirements of the Employee Retirement Income Security Act (“ERISA”). At December 31, 2017, Registrant had 949 participants in the Pension Plan.

Employees hired or rehired after December 31, 2010 are eligible to participate in a defined contribution plan. Registrant's existing 401(k) Investment Incentive Program was amended to include this defined contribution plan. Under this plan, Registrant provides a contribution of 5.25% of eligible pay each pay period into investment vehicles offered by the plan’s trustee. Full vesting under this plan occurs upon three years of service. Employees hired before January 1, 2011 continue to participate in and accrue benefits under the terms of the Pension Plan.

Registrant also provides post-retirement medical benefits for all active employees hired before February of 1995 through a medical insurance plan. Eligible employees, who retire prior to age 65, and/or their spouses, are able to retain the benefits under the plan for active employees until reaching age 65. Eligible employees upon reaching age 65, and those eligible employees retiring at or after age 65, and/or their spouses, receive coverage through a Medicare supplement insurance policy paid for by Registrant subject to an annual cap limit. Registrant’s post-retirement medical plan does not provide prescription drug benefits to Medicare-eligible employees and is not affected by the Medicare Prescription Drug Improvement and Modernization Act of 2003.

In accordance with the accounting guidance for the effects of certain types of regulation, Registrant has established a regulatory asset for its underfunded position in its pension and post-retirement medical plans that is expected to be recovered through rates in future periods. The changes in actuarial gains and losses, prior service costs and transition assets or obligations pertaining to the regulatory asset are recognized as an adjustment to the regulatory asset account as these amounts are recognized as components of net periodic pension costs each year and in the rate-making process.

The following table sets forth the Pension Plan’s and post-retirement medical plan’s funded status and amounts recognized in Registrant’s balance sheets and the components of net pension cost and accrued liability at December 31, 2017 and 2016:

| (dollars in thousands) | Pension Benefits | | Post-Retirement Medical Benefits | |
|---|------------------|-------------|----------------------------------|-----------|
| | 2017 | 2016 | 2017 | 2016 |
| Change in Projected Benefit Obligation: | | | | |
| Projected benefit obligation at beginning of year | \$ 180,364 | \$ 168,934 | \$ 8,802 | \$ 9,393 |

* Age-graded ranging from 3.0% to 8.0%.

[Table of Contents](#)

Consistent with decisions from the CPUC and in accordance with regulatory accounting principles, Registrant capitalizes a portion of its pension and other post-retirement costs in the overhead pool included in GSWC's utility plant. The components of net periodic pension and post-retirement benefits cost, before allocation to the overhead pool, for 2017, 2016 and 2015 are as follows:

| (dollars in thousands, except percent) | Pension Benefits | | | Post-Retirement Medical Benefits | | |
|---|------------------|----------|----------|----------------------------------|----------|----------|
| | 2017 | 2016 | 2015 | 2017 | 2016 | 2015 |
| Components of Net Periodic Benefits Cost: | | | | | | |
| Service cost | \$ 4,999 | \$ 5,094 | \$ 6,276 | \$ 227 | \$ 247 | \$ 340 |
| Interest cost | 7,904 | 7,910 | 7,686 | 324 | 371 | 435 |
| Expected return on plan assets | (9,705) | (9,838) | (9,795) | (466) | (489) | (493) |
| Amortization of prior service cost (credit) | — | 49 | 118 | — | (34) | (200) |
| Amortization of actuarial (gain) loss | 923 | 911 | 1,790 | (775) | (701) | (316) |
| Net periodic pension cost under accounting standards | \$ 4,121 | \$ 4,126 | \$ 6,075 | \$ (690) | \$ (606) | \$ (234) |

| Rate of compensation increase | ** | ** | 4.00% | N/A | N/A | N/A |

*6.0% for union plan and 4.2% for non-union (net of income taxes) in 2017, and 7.00% for union plan and 4.20% for non-union (net of income taxes) for 2016 and 2015.

** Age-graded ranging from 3.0% to 8.0%.

Regulatory Adjustment:

The CPUC authorized GSWC to track differences between the forecasted annual pension expenses adopted in rates for its water and electric regions and the general office, and the actual annual expense to be recorded by GSWC in accordance with the accounting guidance for pension costs. During the years ended December 31, 2017, 2016, and 2015, GSWC's actual expense was lower than the amounts included in water and electric customer rates by \$583,000, \$859,000 and \$523,000, respectively. These annual over-collections have been recorded in the two-way pension balancing accounts included within regulatory assets. As of December 31, 2017, the pension balancing account had a \$1.7 million cumulative net over-collection included within regulatory assets (Note 2).

Plan Funded Status:

The Pension Plan was underfunded at December 31, 2017 and 2016. Registrant's market related value of plan assets is equal to the fair value of plan assets. Past volatile market conditions have affected the value of GSWC's trust established to fund its future long-term pension benefits. These benefit plan assets and related obligations are measured annually using a December 31 measurement date. Changes in the Pension Plan's funded status will affect the assets and liabilities recorded on the balance sheet in accordance with accounting guidance on employers' accounting for defined benefit pension and other post-retirement plans. Due to Registrant's regulatory recovery treatment, the recognition of the underfunded status for the Pension Plan has been offset by a regulatory asset pursuant to guidance on the accounting for the effects of certain types of regulation.

Plan Assets:

The assets of the pension and post-retirement medical plans are managed by a third party trustee. The investment policy allocation of the assets in the trust was approved by Registrant's Administrative Committee (the "Committee") for the pension and post-retirement medical funds, which has oversight responsibility for all retirement plans. The primary objectives underlying the investment of the pension and post-retirement plan assets are: (i) attempt to maintain a fully funded status with a cushion for unexpected developments, possible future increases in expense levels, and/or a reduction in the expected return on investments, (ii) seek to earn long-term returns that compare favorably to appropriate market indexes, peer group universes and the policy asset allocation index, (iii) seek to provide sufficient liquidity to pay current benefits and expenses, (iv) attempt to limit risk exposure through prudent diversification, and (v) seek to limit costs of administering and managing the plans.

The Committee recognizes that risk and volatility are present to some degree with all types of investments. High levels of risk may be avoided through diversification by asset class, style of each investment manager and sector and industry limits. Investment managers are retained to manage a pool of assets and allocate funds in order to achieve an appropriate, diversified and balanced asset mix. The Committee's strategy balances the requirement to maximize returns using potentially higher-return generating assets, such as equity securities, with the need to control the risk of its benefit obligations with less volatile assets, such as fixed-income securities.

The Committee approves the target asset allocations. Registrant's pension and post-retirement plan weighted-average asset allocations at December 31, 2017 and 2016, by asset category are as follows:

| Asset Category | Pension Benefits | | Post-Retirement Medical Benefits | |
|----------------------------------|------------------|------|----------------------------------|------|
| | 2017 | 2016 | 2017 | 2016 |
| Actual Asset Allocations: | | | | |
| Equity securities | 57% | 57% | 59% | 58% |
| Debt securities | 39% | 38% | 37% | 39% |
| Real Estate Funds | 4% | 5% | —% | —% |
| Cash equivalents | —% | —% | 4% | 3% |
| Total | 100% | 100% | 100% | 100% |

Equity securities did not include AWR's Common Shares as of December 31, 2017 and 2016.

| Target Asset Allocations for 2017: | Pension Benefits | Post-retirement Medical Benefits |
|------------------------------------|------------------|----------------------------------|
| Equity securities | 60% | 60% |
| Debt securities | 40% | 40% |
| Total | 100% | 100% |

The Pension Plan assets are in collective trust funds managed by a management firm appointed by the Committee. The fair value of these collective trust funds is measured using net asset value per share. In accordance with ASU 2015-07 *Disclosures for Investments in Certain Entities that Calculate Net Asset Value per Share (or Its Equivalents)*, the fair value of the collective trust funds is not categorized in the fair value hierarchy as of December 31, 2017 and 2016.

| U.S. large cap funds | 46,175 | — | Daily | Daily |
| International funds | 14,869 | — | Daily | Daily |
| Total equity funds | 85,356 | — | | |
| Real estate funds | 7,342 | — | Daily | Daily |
| Total | \$ 150,872 | — | | |

The collective trust funds may be invested or redeemed daily, and generally do not have any significant restrictions to redeem the investments.

As previously discussed in Note 1, the accounting guidance for fair value measurements establishes a framework for measuring fair value and requires fair value measurements to be classified and disclosed in one of three levels. As required by the accounting guidance, assets and liabilities are classified in their entirety based on the lowest level of input that is significant to the fair value measurement. All equity investments in the post-retirement medical plan are Level 1 investments in mutual funds. The fixed income category includes corporate bonds and notes. The majority of fixed income investments range in maturities from less than one to twenty years. The fair values of these investments are based on quoted market prices in active markets.

[Table of Contents](#)

The following tables set forth by level, within the fair value hierarchy, the post-retirement plan's investment assets measured at fair value as of December 31, 2017 and 2016:

| (dollars in thousands) | Fair Value as of December 31, 2017 | | | |
|---|------------------------------------|---------|---------|-----------|
| | Level 1 | Level 2 | Level 3 | Total |
| Fair Value of Post-Retirement Plan Assets: | | | | |
| Cash equivalents | \$ 189 | — | — | \$ 189 |
| Fixed income | 4,364 | — | — | 4,364 |
| U.S. equity securities (large cap stocks) | 6,507 | — | — | 6,507 |
| Total investments measured at fair value | \$ 11,060 | — | — | \$ 11,060 |

| (dollars in thousands) | Fair Value as of December 31, 2016 | | | |
|---|------------------------------------|---------|---------|-----------|
| | Level 1 | Level 2 | Level 3 | Total |
| Fair Value of Post-Retirement Plan Assets: | | | | |
| Cash equivalents | \$ 360 | — | — | \$ 360 |
| Fixed income | 4,072 | — | — | 4,072 |
| U.S. equity securities (large cap stocks) | 6,106 | — | — | 6,106 |
| Total investments measured at fair value | \$ 10,538 | — | — | \$ 10,538 |

Plan Contributions:

During 2017, Registrant contributed \$6.5 million to its pension plan and did not make a contribution to the post-retirement medical plan. Registrant currently expects to contribute approximately \$6.1 million to its pension plan in 2018. Registrant's policy is to fund the plans annually at a level which is deductible for income tax purposes and is consistent with amounts recovered in customer rates.

Benefit Payments:

Estimated future benefit payments at December 31, 2017 for the next five years and thereafter are as follows (in thousands):

| | Pension Benefits | Post-Retirement Medical Benefits |
|------------|------------------|----------------------------------|
| 2018 | \$ 6,737 | \$ 554 |
| 2019 | 7,281 | 574 |
| 2020 | 7,900 | 632 |
| 2021 | 8,516 | 720 |
| 2022 | 9,196 | 749 |
| Thereafter | 54,429 | 3,365 |
| Total | \$ 94,059 | \$ 6,594 |

Assumptions:

Certain actuarial assumptions, such as the discount rate, long-term rate of return on plan assets, mortality, and the healthcare cost trend rate have a significant effect on the amounts reported for net periodic benefit cost as well as the related benefit obligation amounts. During 2015, Registrant updated other key assumptions used for the valuation of the pension, post-retirement medical and supplemental executive retirement plans. These updates included: (i) updates in demographic assumptions, such as retirement and termination rates, to reflect recent changes in participant behavior, and (ii) salary increases based on Registrant's recent and future expected experience.

Discount Rate — The assumed discount rate for pension and post-retirement medical plans reflects the market rates for high-quality corporate bonds currently available. Registrant's discount rates were determined by considering the average of pension yield curves constructed of a large population of high quality corporate bonds. The resulting discount rate reflects the matching of plan liability cash flows to the yield curves.

[Table of Contents](#)

Expected Long-Term Rate of Return on Assets — The long-term rate of return on plan assets represents an estimate of long-term returns on an investment portfolio consisting of a mixture of equities, fixed income and other investments. To develop the expected long-term rate of return on assets assumption for the pension plan, Registrant considered the historical returns and the future expectations for returns for each asset class, as well as the target asset allocation of the pension portfolio. Registrant's policy is to fund the medical benefit trusts based on actuarially determined amounts as allowed in rates approved by the CPUC. Registrant has invested the funds in the post-retirement trusts that will achieve a desired return and minimize amounts necessary to recover through rates. The mix is expected to provide for a return on assets similar to the Pension Plan and to achieve Registrant's targeted allocation. This resulted in the selection in 2017 of the 6.0% long-term rate of return on assets assumption for the union plan and 4.2% (net of income taxes) for the non-union plan portion of the post-retirement plan.

Mortality — Mortality assumptions are a critical component of benefit obligation amounts and a key factor in determining the expected length of time for annuity payments. In 2014, the Society of Actuaries ("SOA") released new mortality tables for pension plans. Beginning with 2014, the benefit obligation amounts assumed a longer life expectancy of participants as a result of the actuarial update to mortality tables. In 2016, the SOA published updated mortality tables reflecting three additional years of data and refined certain parameters used in developing the 2014 tables. Accordingly, the benefit obligation amounts as of December 31, 2017 and 2016 have incorporated the latest updates to the mortality tables.

Healthcare Cost Trend Rate — The assumed health care cost trend rate for 2018 starts at 6.2% grading down to 4.5% in 2038 for those under age 65, and at 6.2% grading down to 4.4% in 2038 for those 65 and over. Assumed health care cost trend rates have a significant effect on the amounts reported for the health care plans. A one-percentage-point change in assumed health care cost trend rates would have the following effects on the post-retirement medical plan:

| (dollars in thousands) | 1-Percentage-Point Increase | | 1-Percentage-Point Decrease | |
|---|--------------------------------|-----|--------------------------------|-------|
| Effect on total of service and interest cost components | \$ | 45 | \$ | (39) |
| Effect on post-retirement benefit obligation | \$ | 894 | \$ | (769) |

Supplemental Executive Retirement Plan:

Registrant has a supplemental executive retirement plan ("SERP") that provides additional retirement benefits to certain key employees and officers of Registrant by making up benefits that are limited by Sections 415 and 401(a)(17) of the Internal Revenue Code of 1986, as amended, and certain additional benefits. The Board of Directors approved the establishment of a Rabbi Trust created for the SERP. Assets in a Rabbi Trust can be subject to the claims of creditors; therefore, they are not considered as an asset for purposes of computing the SERP's funded status. As of December 31, 2017, the balance in the Rabbi Trust totaled \$15.2 million and is included in Registrant's other property and investments.

All equity investments in the Rabbi Trust are Level 1 investments in mutual funds. The fixed income category includes corporate bonds and notes. The fair values of these investments are based on quoted market prices in active markets. The following tables set forth by level, within the fair value hierarchy, the Rabbi Trust investment assets measured at fair value as of December 31, 2017 and 2016:

| (dollars in thousands) | Fair Value as of December 31, 2017 | | | |
|--|------------------------------------|----------|----------|------------------|
| | Level 1 | Level 2 | Level 3 | Total |
| Fair Value of Assets held in Rabbi Trust: | | | | |
| Cash equivalents | \$ 45 | — | — | \$ 45 |
| Fixed income securities | 6,072 | — | — | 6,072 |
| Equity securities | 9,110 | — | — | 9,110 |
| Total investments measured at fair value | <u>\$ 15,227</u> | <u>—</u> | <u>—</u> | <u>\$ 15,227</u> |

| (dollars in thousands) | Fair Value as of December 31, 2016 | | | |
|--|------------------------------------|----------|----------|------------------|
| | Level 1 | Level 2 | Level 3 | Total |
| Fair Value of Assets held in Rabbi Trust: | | | | |
| Cash equivalents | \$ 46 | — | — | \$ 46 |
| Fixed income securities | 4,801 | — | — | 4,801 |
| Equity securities | 7,149 | — | — | 7,149 |
| Total investments measured at fair value | <u>\$ 11,996</u> | <u>—</u> | <u>—</u> | <u>\$ 11,996</u> |

| Thereafter | | 7,276 |
| Total | <u>\$</u> | <u>12,377</u> |

401(k) Investment Incentive Program:

Registrant has a 401(k) Investment Incentive Program under which employees may invest a percentage of their pay, up to a maximum investment prescribed by law, in an investment program managed by an outside investment manager. Registrant's cash contributions to the 401(k) are based upon a percentage of individual employee contributions and for the years ended December 31, 2017, 2016 and 2015 were \$2.3 million, \$2.2 million and \$2.1 million, respectively. The Investment Incentive Program also incorporates the defined contribution plan for employees hired on or after January 1, 2011. Contributions to the defined contribution plan for the years ended December 31, 2017, 2016 and 2015 were \$1.1 million, \$951,000 and \$755,000, respectively.

Note 12 — Stock-Based Compensation Plans

Summary Description of Stock Incentive Plans

As of December 31, 2017, AWR had five stock incentive plans: the 2000, 2008 and 2016 stock incentive plans for its employees, and the 2003 and 2013 non-employee directors plans for its Board of Directors, each more fully described below.

2000, 2008 and 2016 Employee Plans — AWR adopted these employee plans, following shareholder approval, to provide stock-based incentive awards in the form of stock options, restricted stock units and restricted stock to employees as a means of promoting the success of Registrant by attracting, retaining and more fully aligning the interests of employees with those of customers and shareholders. The 2008 and 2016 employee plans also provide for the grant of performance awards. No additional grants may be made under the 2000 or 2008 employee plans. No restricted stock grants are currently outstanding under either the 2000 or 2008 employee plans and, as of January 28, 2018, no stock options were outstanding under the 2000 plan.

For stock options, Registrant's Compensation Committee of the Board of Directors ("Compensation Committee") determines, among other things, the date of grant, the form, term, option exercise price, vesting and exercise terms of each option. Stock options granted by AWR have been in the form of nonqualified stock options, expire 10 years from the date of grant, vest over a period of 3 years and are subject to earlier termination as provided in the form of option agreements approved by the Compensation Committee. The option price per share is determined by the Compensation Committee at the time of grant but may not be less than the fair market value of AWR's Common Shares on the date of grant.

For restricted stock unit awards, the Compensation Committee determines the specific terms, conditions and provisions relating to each restricted stock unit. Each employee who has been granted a time-vested restricted stock unit is

[Table of Contents](#)

entitled to dividend equivalent rights in the form of additional restricted stock units until vesting of the time-vested restricted stock units. In general, time-vested restricted stock units vest over a period of 3 years. Restricted stock units may also vest upon retirement if the grantee is at least 55 and the sum of the grantee's age and years of service are equal to or greater than 75, or upon death or total disability. In addition, restricted stock units may vest following a change in control if the Company terminates the grantee other than for cause or the employee terminates employment for good reason. Each restricted stock unit is non-voting and entitles the holder of the restricted stock unit to receive one Common Share.

The Compensation Committee also has the authority to determine the number, amount or value of performance awards, the duration of the performance period or performance periods applicable to the award and the performance criteria applicable to each performance award for each performance period. Each outstanding performance award granted by the Compensation Committee has been in the form of restricted stock units that generally vest over a period of three years as provided in the performance award agreement. The amount of the performance award paid to an employee depends upon satisfaction of performance criteria following the end of a three-year performance period. Performance awards may also vest and be payable upon retirement if the grantee is at least 55 and the sum of the grantee's age and years of service are equal to or greater than 75, or upon death or total disability, with adjustments which take into account the shortened performance period for death and disability. In addition, performance awards may vest following a change in control if the Company terminates the grantee other than for cause or the employee terminates employment for good reason, subject to adjustments which take into account the shortened performance period.

2003 and 2013 Directors Plans — The Board of Directors and shareholders of AWR have approved the 2003 and 2013 directors plans in order to provide the non-employee directors with supplemental stock-based compensation to encourage them to increase their stock ownership in AWR. No more grants may be made under the 2003 directors plan.

Non-employee directors are entitled to receive restricted stock units in an amount determined by the board of directors. This amount may not exceed two times the annual retainer paid to directors. Effective for grants of restricted stock units to non-employee directors after 2012, such units are convertible to AWR's Common Shares ninety days after the grant date.

All non-employee directors of AWR who were directors of AWR at the 2003 annual meeting have also received restricted stock units which will be distributed upon termination of the director's service as a director.

All stock options, restricted stock units and performance awards have been granted with dividend equivalent rights payable in the form of additional restricted stock units.

Recognition of Compensation Expense

Registrant recognizes compensation expense related to the fair value of stock-based compensation awards. Share-based compensation cost is measured at the grant date, based on the calculated fair value of the award, and is recognized as an expense over the employee's requisite service period (generally the vesting period of the equity grant). Immediate vesting occurs if the employee is at least 55 years old and the sum of the employee's age and years of employment is equal to or greater than 75. Registrant assumes that pre-vesting forfeitures will be minimal, and recognizes pre-vesting forfeitures as they occur, which results in a reduction in compensation expense.

The following table presents share-based compensation expenses for the years ended December 31, 2017, 2016 and 2015. These expenses resulting from restricted stock units, including performance awards, are included in administrative and general expenses in AWR's and GSWC's statements of income:

| (in thousands) | AWR | | | GSWC | | |
|--|-------------------------------------|----------|----------|-------------------------------------|----------|----------|
| | For The Years Ended December 31, | | | For The Years Ended December 31, | | |
| | 2017 | 2016 | 2015 | 2017 | 2016 | 2015 |
| Stock-based compensation related to: | | | | | | |
| Restricted stock units | \$ 2,885 | \$ 2,538 | \$ 2,754 | \$ 2,420 | \$ 2,118 | \$ 2,443 |
| Total stock-based compensation expense | \$ 2,885 | \$ 2,538 | \$ 2,754 | \$ 2,420 | \$ 2,118 | \$ 2,443 |

Equity-based compensation cost, capitalized as part of GSWC's utility plant for the years ended December 31, 2017, 2016 and 2015 was \$195,000, \$155,000 and \$369,000, respectively, for both AWR and GSWC. For the years ended December 31, 2017, 2016 and 2015, AWR realized approximately \$1.0 million, \$581,000 and \$877,000, respectively, of tax benefits from stock-based awards. For the years ended December 31, 2017, 2016 and 2015, GSWC realized approximately \$1.0 million, \$501,000 and \$872,000, respectively, of tax benefits from stock-based awards.

[Table of Contents](#)

Registrant amortizes stock-based compensation over the requisite (vesting) period for the entire award. Options issued pursuant to the 2008 employee plan vest and are exercisable in installments of 33% the first two years and 34% in the third year, starting one year from the date of the grant and expire 10 years from the date of the grant. No stock options have been granted under the 2016 employee plan. Time-vesting restricted stock units vest and become nonforfeitable in installments of 33% the first two years and 34% in the third year, starting one year from the date of the grant. Outstanding performance awards vest and become nonforfeitable in installments of 33% the first two years and 34% in the third year and are distributed at the end of the performance period if the performance criteria set forth in the award agreement are satisfied.

Stock Options— There were no stock options granted during the years 2017, 2016 or 2015. A summary of stock option activity as of December 31, 2017 and changes during the year ended December 31, 2017, are presented below:

| | Number of Options | Weighted Average Exercise Price | Weighted Average Remaining Contractual Term | Aggregate Intrinsic Value |
|--|----------------------|---------------------------------------|---|------------------------------|
| Options outstanding at January 1, 2017 | 136,560 | \$ 17.27 | | |
| Exercised | (52,936) | 17.18 | | |
| Forfeited or expired | (14,422) | 19.50 | | |
| Options outstanding at December 31, 2017 | 69,202 | \$ 16.87 | 1.35 | \$ 1,167,405 |
| Options exercisable at December 31, 2017 | 69,202 | \$ 16.87 | 1.35 | \$ 1,167,405 |

The aggregate intrinsic value in the table above represents the total pretax intrinsic value (i.e., the difference between the closing price of AWR's Common Shares on the last trading day of the 2017 calendar year and the exercise price, times the number of shares) that would have been received by the option holders had all option holders exercised their option on December 31, 2017. This amount changes if the fair market value of the Common Shares changes. The total intrinsic value of options exercised during the years ended December 31, 2017, 2016 and 2015 was approximately \$1,718,000, \$308,000 and \$1,457,000, respectively.

During the years ended December 31, 2017, 2016 and 2015, Registrant received approximately \$909,000, \$235,000 and \$1,198,000, respectively, in cash proceeds from the exercise of its stock options.

Restricted Stock Units (Time-Vested)— A restricted stock unit ("RSU") represents the right to receive a share of AWR's Common Shares and are valued based on the fair market value of AWR's Common Shares on the date of grant. The fair value of RSUs were determined based on the closing trading price of Common Shares on the grant date. A summary of the status of Registrant's outstanding RSUs, excluding performance awards, to employees and directors as of December 31, 2017, and changes during the year ended December 31, 2017, is presented below:

| | Number of Restricted Share Units | Weighted Average Grant-Date Value |
|---|--|--------------------------------------|
| Restricted share units at January 1, 2017 | 107,729 | \$ 30.83 |
| Granted | 41,755 | 44.46 |
| Vested | (40,695) | 39.32 |
| Forfeited | (1,502) | 42.32 |
| Restricted share units at December 31, 2017 | 107,287 | \$ 32.75 |

As of December 31, 2017, there was approximately \$824,000 of total unrecognized compensation cost related to time-vested restricted stock units granted under AWR's employee and director's stock plans. That cost is expected to be recognized over a weighted average period of 1.36 years.

Restricted Stock Units (Performance Awards)— During the years ended December 31, 2017, 2016 and 2015, the Compensation Committee granted performance awards in the form of restricted stock units to officers of the Registrant. A performance award represents the right to receive a share of AWR's Common Shares if specified performance goals are met over the performance period specified in the grant (generally three years). Each grantee of any outstanding performance award may earn between 0% and 200% of the target amount depending on Registrant's performance against performance goals, which are determined by the Compensation Committee on the date of grant. As determined by the Compensation Committee, the performance awards granted during the years ended December 31, 2017, 2016 and 2015 included various performance-based conditions and one market-based condition related to total shareholder return ("TSR") that will be earned based on Registrant's TSR compared to the TSR for a specific peer group of investor-owned water companies.

[Table of Contents](#)

A summary of the status of Registrant's outstanding performance awards to officers as of December 31, 2017, and changes during the year ended December 31, 2017, is presented below:

| | Number of Performance awards | Weighted Average Grant-Date Value |
|---|------------------------------------|--------------------------------------|
| Performance awards at January 1, 2017 | 102,203 | \$ 35.25 |
| Granted | 31,558 | 44.10 |
| Performance criteria adjustment | 9,332 | 43.40 |
| Vested | (45,214) | 29.60 |
| Performance awards at December 31, 2017 | 97,879 | \$ 41.49 |

A portion of the fair value of performance awards was estimated at the grant date based on the probability of satisfying the market-based condition using a Monte-Carlo simulation model, which assesses the probabilities of various outcomes of the market condition. The portion of the fair value of the performance awards associated with performance-based conditions was based on the fair market value of AWR's Common Shares at the grant date. The fair value of each outstanding performance award grant is amortized into compensation expense in installments of 33% the first two years and 34% in the third year of their respective vesting periods, which is generally over 3 years unless earlier vested pursuant to the terms of the agreement. The accrual of compensation costs is based on the estimate of the final expected value of the award and is adjusted as required for the portion based on the performance-based condition. Unlike the awards with performance-based conditions, for the portion based on the market-based condition, compensation cost is recognized, and not reversed, even if the market condition is not achieved, as required by the accounting guidance for share-based awards. As of December 31, 2017, \$1,059,000 of unrecognized compensation costs related to performance awards is expected to be recognized over a weighted average period of 1.58 years.

Note 13 - Commitments***GSWC's Water Supply:***

GSWC obtains its water supply from its operating wells and purchases from others, principally member agencies of the Metropolitan Water District of Southern California ("MWD"). MWD is a public agency and quasi-municipal corporation created in 1928 by a vote of the electorates of several Southern California cities. MWD's primary purpose was and is to provide a supplemental supply of water for domestic and municipal uses and purposes at wholesale rates to its member public agencies. GSWC has connections to MWD's water distribution facilities and those of other member water agencies. MWD's principal sources of water are the State Water Project and the Colorado River.

GSWC has contracts to purchase water or water rights for an aggregate amount of \$4.8 million as of December 31, 2017. Included in the \$4.8 million is a commitment of \$2.4 million to lease water rights from a third party under an agreement which expires in 2028. The remaining \$2.4 million are commitments for purchased water with other third parties which expire through 2038.

GSWC's estimated future minimum payments under these purchased water supply commitments at December 31, 2017 are as follows (in thousands):

| | | |
|------------|----|-------|
| 2018 | \$ | 400 |
| 2019 | | 400 |
| 2020 | | 401 |
| 2021 | | 400 |
| 2022 | | 401 |
| Thereafter | | 2,792 |
| Total | \$ | 4,794 |

Bear Valley Electric Service:

Generally, BVES purchases power at a fixed cost, under long-term purchased power contracts, depending on the amount of power and the period during which the power is purchased under such contracts. BVES began taking power pursuant to purchased power contracts approved by the CPUC effective January 1, 2015 at a fixed cost over three and five year terms depending on the amount of power and period during which the power is purchased under the contracts. The three-year contract expired in 2017. As of December 31, 2017, GSWC's commitment under BVES's remaining contract totaled approximately \$9.6 million.

Operating Leases:

Registrant leases equipment and facilities primarily for its Regional and District offices and ASUS operations under non-cancelable operating leases with varying terms, provisions and expiration dates. Rent expense for leases that contain scheduled rent increases are recorded on a straight-line basis. During 2017, 2016 and 2015, Registrant's consolidated rent expense was approximately \$2,448,000, \$2,298,000 and \$2,740,000, respectively. Registrant's future minimum payments under long-term non-cancelable operating leases at December 31, 2017 are as follows (in thousands):

| | | |
|------------|----|--------------|
| 2018 | \$ | 2,250 |
| 2019 | | 1,934 |
| 2020 | | 1,717 |
| 2021 | | 819 |
| 2022 | | 892 |
| Thereafter | | 339 |
| Total | \$ | <u>7,951</u> |

There is no material difference between the consolidated operations of AWR and the operations of GSWC in regard to the future minimum payments under long-term non-cancelable operating leases.

Note 14 - Contingencies and Gain on Sale of Assets***Condemnation of Properties:***

The laws of the State of California provide for the acquisition of public utility property by governmental agencies through their power of eminent domain, also known as condemnation, where doing so is necessary and in the public interest. In addition, these laws provide that the owner of utility property (i) may contest whether the condemnation is necessary and in the public interest, and (ii) is entitled to receive the fair market value of its property if the property is ultimately taken.

Claremont System:

In December 2014, the City of Claremont, California ("Claremont") filed an eminent-domain action against GSWC to condemn GSWC's Claremont water system. In December 2016, the County of Los Angeles Superior Court (the "Court") issued a decision rejecting Claremont's attempt to take over GSWC's Claremont water system. In February 2017, the Court further ordered that GSWC is entitled to recover \$7.6 million ("Judgment Amount") of its litigation expenses and related defense costs from Claremont. During the first quarter of 2017, Claremont appealed both decisions.

In October 2017, GSWC and Claremont entered into a settlement agreement whereby Claremont agreed to drop its appeals and in December 2017 paid \$2.0 million to GSWC as partial satisfaction of the Judgment Amount, plus interest accrued through the end of 2017. GSWC recorded the \$2.0 million as a reduction to legal fees of \$1.8 million and an increase in interest income of \$200,000 in the fourth quarter of 2017. Furthermore, quarterly interest-only payments calculated on the unpaid Judgment Amount of \$5.9 million are to be made by Claremont to GSWC over the next twelve years. If Claremont (i) makes all of the quarterly payments as required, and (ii) does not take formal action to condemn GSWC's Claremont water system before December 31, 2029, then on January 1, 2030, the unpaid Judgment Amount will be deemed satisfied by Claremont without further payment required to be made to GSWC. However, if Claremont were to take formal action within the next 12 years or miss any of the required payments specified in the settlement agreement, the unpaid Judgment Amount and any unpaid accrued interest would immediately become due and payable. GSWC is unable to predict the actions that Claremont will take over the next 12 years and, as a result, will record the quarterly payments only to the extent that they are collected from Claremont over this period. GSWC serves approximately 11,000 customers in Claremont.

Ojai Water System and Gain on Sale of Assets:

On April 12, 2017, the Board of Directors of Casitas Municipal Water District (“Casitas”) approved a settlement agreement with GSWC, and a group of citizens referred to as Ojai Friends of Locally Owned Water (“Ojai FLOW”), to resolve the eminent domain action and other litigation brought by Casitas and Ojai FLOW against GSWC. In accordance with the terms of the settlement agreement, on June 8, 2017 Casitas acquired the operating assets of GSWC’s 2,900-connection Ojai water system by eminent domain for \$34.3 million in cash, including payments for customer receivables and regulatory assets, and Casitas and Ojai FLOW dismissed all claims against GSWC. As a result of this transaction, GSWC recorded a pretax gain of \$8.3 million on the sale of the Ojai water system during the second quarter of 2017. The proceeds received from this transaction were used to repay a portion of GSWC’s short-term borrowings. On June 8, 2017, the closing date of the transaction, the assets and liabilities related to the Ojai water system acquired and assumed by Casitas were as follows:

Assets and Liabilities Sold:

| (dollars in thousands) | As of June 8, 2017 | |
|--|---------------------------|--------|
| Net utility plant, including construction work in progress | \$ | 22,256 |
| Accounts receivable | | 721 |
| Regulatory assets | | 3,944 |
| Assets sold | \$ | 26,921 |
| Advances for construction | \$ | (366) |
| Contributions in aid of construction — net | | (532) |
| Liabilities directly associated with assets sold | \$ | (898) |

Environmental Clean-Up and Remediation:

GSWC has been involved in environmental remediation and cleanup at a plant site (“Chadron Plant”) that contained an underground storage tank which was used to store gasoline for its vehicles. This tank was removed from the ground in July 1990 along with the dispenser and ancillary piping. Since then, GSWC has been involved in various remediation activities at this site. Analysis indicates that offsite monitoring wells may also be necessary to document effectiveness of remediation.

As of December 31, 2017, the total spent to clean-up and remediate the Chadron Plant was approximately \$5.3 million, of which \$1.5 million has been paid by the State of California Underground Storage Tank Fund. Amounts paid by GSWC have been included in rate base and approved by the CPUC for recovery. As of December 31, 2017, GSWC has a regulatory asset and an accrued liability for the estimated remaining cost of \$1.3 million to complete the cleanup at the site. The estimate includes costs for two years of continued activities of groundwater cleanup and monitoring, future soil treatment and site-closure-related activities. The ultimate cost may vary as there are many unknowns in remediation of underground gasoline spills and this is an estimate based on currently available information. Management also believes it is probable that the estimated additional costs will be approved in rate base by the CPUC.

Other Litigation:

Registrant is also subject to other ordinary routine litigation incidental to its business, some of which may include claims for compensatory and punitive damages. Management believes that rate recovery, proper insurance coverage and reserves are in place to insure against, among other things, property, general liability, employment, and workers’ compensation claims incurred in the ordinary course of business. Insurance coverage may not cover certain claims involving punitive damages. However, Registrant does not believe the outcome from any pending suits or administrative proceedings will have a material effect on Registrant’s consolidated results of operations, financial position or cash flows.

[Table of Contents](#)**Note 15 - Business Segments**

AWR has 3 reportable segments, water, electric and contracted services, whereas GSWC has 2 segments, water and electric. AWR has no material assets other than its investments in its subsidiaries on a stand-alone basis.

All activities of GSWC are geographically located within California. Activities of ASUS and the Military Utility Privatization Subsidiaries are conducted in California, Florida, Georgia, Maryland, New Mexico, North Carolina, South Carolina, Texas and Virginia. In September 2017, ASUS was awarded a new 50-year contract by the U.S. government for water and wastewater operations at Fort Riley located in Kansas. ASUS expects to assume operations at Fort Riley following the completion of a six-to-twelve-month transition period currently underway. Each of the Military Utility Privatization Subsidiaries is regulated, if applicable, by the state in which the subsidiary primarily conducts water and/or wastewater operations. Fees charged for operations and maintenance and renewal and replacement services are based upon the terms of the contracts with the U.S. government which have been filed, as appropriate, with the commissions in the states in which ASUS's subsidiaries are incorporated.

The tables below set forth information relating to GSWC's operating segments, ASUS and the Military Utility Privatization Subsidiaries and other matters. Total assets by segment are not presented below, as certain of Registrant's assets are not tracked by segment. The utility plant balances are net of respective accumulated provisions for depreciation. Capital additions reflect capital expenditures paid in cash and exclude U.S. government-funded and third-party prime funded capital expenditures for ASUS and property installed by developers and conveyed to GSWC.

| (dollars in thousands) | As Of And For The Year Ended December 31, 2017 | | | | |

* The sum of the quarterly 2017 basic earnings per share amounts do not agree to the yearly total due to rounding.

- (1) The second quarter of 2017 includes (i) an \$8.3 million pretax gain related to the sale of GSWC's Ojai water system, and (ii) retroactive operating revenues at ASUS totaling \$1.0 million related to periods prior to 2017 as a result of the U.S. government's approval of ASUS's economic price adjustment for one of its utility privatization contracts.
- (2) The fourth quarter of 2017 includes the remeasurement of deferred taxes as a result of the Tax Cuts and Jobs Act. In addition, a \$1.8 million reduction to GSWC's operating expenses was recorded representing cash received for reimbursement of legal and other defense costs incurred related to condemnation matters.
- (3) The fourth quarter of 2016 includes (i) a \$5.2 million retroactive downward adjustment to GSWC's water gross margin related to the first nine months of 2016 as a result of the CPUC's delayed decision issued in GSWC's water general rate case in December 2016, which was retroactive to January 1, 2016, and (ii) retroactive operating revenues at ASUS totaling \$1.7 million related to the period ended September 30, 2016 as a result of the U.S. government's concurrence with ASUS's price redetermination for one of its utility privatization contracts.

[Table of Contents](#)**Item 9. Changes in and Disagreements with Accountants on Accounting and Financial Disclosure**

None.

Item 9A. Controls and Procedures**(a) Conclusion Regarding the Effectiveness of Disclosure Controls and Procedures**

Under the supervision and with the participation of our management, including our principal executive officer and principal financial officer, we conducted an evaluation of our disclosure controls and procedures, as such term is defined under Rule 13a-15(e) or 15d-15(e) promulgated under the Securities Exchange Act of 1934, as amended (the "Exchange Act"). Based on this evaluation, our principal executive officer and our principal financial officer concluded that the disclosure controls and procedures of AWR and GSWC were effective as of the end of the period covered by this annual report.

(b) Management's Report on Internal Control over Financial Reporting

Our management is responsible for establishing and maintaining adequate internal control over financial reporting, as such term is defined in Exchange Act Rule 13a-15(f). Under the supervision and with the participation of our management, including our principal executive officer and principal financial officer, we conducted an evaluation of the effectiveness of our internal control over financial reporting based on the framework in *Internal Control - Integrated Framework* (2013) issued by the Committee of Sponsoring Organizations of the Treadway Commission. Based on our evaluation under the framework in *Internal Control - Integrated Framework*, our management concluded that the internal control over financial reporting of AWR and GSWC was effective as of December 31, 2017.

(c) Attestation Report of the Independent Registered Public Accounting Firm

The effectiveness of our internal control over financial reporting of AWR as of December 31, 2017 has been audited by PricewaterhouseCoopers LLP, an independent registered public accounting firm, as stated in their report which is included herein.

(d) Changes in Internal Control over Financial Reporting

There have been no changes in our internal control over financial reporting (as such term is defined in Rules 13a-15(f) or 15d(f) under the Exchange Act) of AWR and GSWC that occurred during the fourth quarter of 2017 that have materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.

Item 9B. Other Information

None.

PART III**Item 10. Directors, Executive Officers and Corporate Governance**

Information responsive to Part III, Item 10 is included in the Proxy Statement, to be filed by AWR with the SEC pursuant to Regulation 14A, under the captions therein entitled: (i) “Proposal 1: Election of Directors”; (ii) “Executive Officers”; (iii) “Governance of the Company”; (iv) “Stock Ownership”; (v) “Nominating and Governance Committee”; (vi) “Audit and Finance Committee;” and (vii) “Obtaining Additional Information From Us” and is incorporated herein by reference pursuant to General Instruction G(3).

Item 11. Executive Compensation

Information responsive to Part III, Item 11 is included in the Proxy Statement, to be filed by AWR with the SEC pursuant to Regulation 14A, under the captions therein entitled: (i) “Proposal 1: Election of Directors”; (ii) “Executive Officers;” and (iii) “Compensation Committee” and is incorporated herein by reference pursuant to General Instruction G(3).

Item 12. Security Ownership of Certain Beneficial Owners and Management and Related Stockholder Matters

Information responsive to Part III, Item 12 is included in the Proxy Statement, to be filed by AWR with the SEC pursuant to Regulation 14A, under the caption entitled “Stock Ownership” and is incorporated herein by reference pursuant to General Instruction G(3).

Securities Authorized for Issuance under Equity Compensation Plans

AWR has made stock awards to its executive officers and managers under the 2000, 2008 and 2016 employee plans. It has also made stock awards to its non-employee directors under the 2003 and 2013 director plans. Information regarding the securities which have been issued and which are available for issuance under these plans is set forth in the table below as of December 31, 2017. This table does not include any AWR Common Shares that may be issued under our 401(k) plan.

| Plan Category | Number of securities to be issued upon exercise of outstanding options, warrants and rights⁽¹⁾ | Weighted-average exercise price of outstanding options, warrants and rights⁽²⁾ | Number of securities remaining available for future issuance under equity compensation plans (excluding securities reflected in the first column)⁽³⁾ |
|--|--|--|--|
| Equity compensation plans approved by shareholders | 299,090 | \$16.87 | 2,050,692 |
| Equity compensation plans not approved by shareholders | — | — | — |
| Total | 299,090 | \$16.87 | 2,050,692 |

(1) Amount shown in this column consists of 69,202 options outstanding under the 2000 employee plan and the 2008 employee plan, 24,718 time-vested restricted stock units outstanding under the 2008 employee plan (including dividend equivalents thereon with respect to declared dividends), and 26,139 time-vested restricted stock units outstanding under the 2016 employee plan (including dividend equivalents thereon with respect to declared dividends), 53,622 performance awards at the maximum level (including dividend equivalents thereon with respect to declared dividends) outstanding under the 2008 employee plan and 68,980 performance awards at the maximum level (including dividend equivalents thereon with respect to declared dividends) outstanding under the 2016 employee plan, and 56,430 restricted stock units (including dividend equivalents thereon with respect to declared dividends) outstanding under the 2003 directors plan.

(2) Amount shown in this column is for options granted only.

(3) Amount shown in this column consists of 195,916 shares available under the 2003 directors plan, 135,035 shares available under the 2013 directors plan, 453,991 shares available under the 2008 employee plan, and 1,265,750 shares available under the 2016 employee plan. The only shares that may be issued under the 2003 directors plan are pursuant to dividend equivalent rights on dividends not yet declared with respect to restricted stock units granted under the 2003 directors plan. The only shares that may be issued under the 2008 employee plan are pursuant to dividend equivalent rights on dividends not yet declared with respect to restricted stock units and performance awards granted under the 2008 employee plan. No additional stock awards may be granted under the 2000 employee plan, the 2003 directors plan or the 2008 employee plan.

AMERICAN STATES WATER COMPANY
NOTES TO CONDENSED FINANCIAL INFORMATION OF PARENT

Note 1 — Basis of Presentation

The accompanying condensed financial statements of AWR (parent) should be read in conjunction with the consolidated financial statements and notes thereto of American States Water Company and subsidiaries ("Registrant") included in Part II, Item 8 of this Form 10-K. AWR's (parent) significant accounting policies are consistent with those of Registrant and its wholly owned subsidiaries, Golden State Water Company ("GSWC") and American States Utility Services, Inc. ("ASUS"), except that all subsidiaries are accounted for as equity method investments.

Related-Party Transactions:

As further discussed in *Note 2 — Notes Payable to Banks*, AWR (parent) has access to a \$150.0 million syndicated credit facility. AWR (parent) borrows under this facility and provides funds to its subsidiaries, in support of their operations. Any amounts owed to AWR (parent) for borrowings under this facility are reflected as inter-company receivables on the condensed balance sheets. The interest rate charged to the subsidiaries is sufficient to cover AWR (parent)'s interest cost under the credit facility.

In October 2015, AWR issued interest bearing promissory notes (the "Notes") to GSWC and ASUS for \$40 million and \$10 million, respectively, which expire on May 23, 2018. Under the terms of the Notes, AWR may borrow from GSWC and ASUS amounts up to \$40 million and \$10 million, respectively, for working capital purposes. AWR agrees to pay any unpaid principal amounts outstanding under these notes, plus accrued interest. As of December 31, 2017 and 2016, there were no amounts outstanding under these notes.

AWR (parent) guarantees performance of ASUS's military privatization contracts and agrees to provide necessary resources, including financing, which are necessary to assure the complete and satisfactory performance of such contracts.

Note 2 — Note Payable to Banks

AWR (parent) has access to a \$150.0 million syndicated credit facility, which expires in May 2018. Management intends to renew the credit facility prior to its expiration. The aggregate effective amount that may be outstanding under letters of credit is \$25.0 million. AWR has obtained letters of credit, primarily for GSWC, in the aggregate amount of \$6.3 million, with fees of 0.65% including: (i) a \$5.4 million letter of credit related to American Recovery and Reinvestment Act funds received by GSWC for reimbursement of capital costs related to the installation of meters in GSWC's Arden-Cordova water system, (ii) letters of credit in an aggregate amount of \$340,000 as security for GSWC's business automobile insurance policy, (iii) a letter of credit in an amount of \$585,000 as security for the purchase of power, and (iv) a \$15,000 irrevocable letter of credit pursuant to a franchise agreement with the City of Rancho Cordova. Letters of credit outstanding reduce the amount that may be borrowed under the revolving credit facility. AWR was not required to maintain any compensating balances.

Loans can be obtained under this credit facility at the option of AWR and bear interest at rates based on credit ratings and Euro rate margins. In May 2017, Standard and Poor's Global Ratings ("S&P") reaffirmed an A+ credit rating with a stable outlook on both AWR and GSWC. S&P's debt ratings range from AAA (highest possible) to D (obligation is in default). In December 2017, Moody's Investors Service ("Moody's") affirmed its A2 rating with a revised rating outlook from stable to positive for GSWC.

At December 31, 2017, there was \$59.0 million outstanding under this facility. At times, AWR (parent) borrows under this facility and provides loans to its subsidiaries in support of its operations, under terms that are similar to that of the credit facility.

AWR's (parent) short-term borrowing activities (excluding letters of credit) for the years ended December 31, 2017 and 2016 were as follows:

| (in thousands, except percent) | December 31, | |
|---------------------------------------|--------------|-----------|
| | 2017 | 2016 |
| Balance Outstanding at December 31, | \$ 59,000 | \$ 90,000 |
| Interest Rate at December 31, | 2.28% | 1.46% |
| Average Amount Outstanding | \$ 65,242 | \$ 59,261 |
| Weighted Average Annual Interest Rate | 1.69% | 1.20% |
| Maximum Amount Outstanding | \$ 102,500 | \$ 96,000 |

[Table of Contents](#)

All of the letters of credit are issued pursuant to the syndicated revolving credit facility. The syndicated revolving credit facility contains restrictions on prepayments, disposition of property, mergers, liens and negative pledges, indebtedness and guaranty obligations, transactions with affiliates, minimum interest coverage requirements, a maximum debt to capitalization ratio and a minimum debt rating. Pursuant to the credit agreement, AWR must maintain a minimum interest coverage ratio of 3.25 times interest expense, a maximum total funded debt ratio of 0.65 to 1.00 and a minimum debt rating from Moody's or S&P of Baa3 or BBB-, respectively. As of December 31, 2017, AWR was in compliance with these covenants with an interest coverage ratio of 7.54 times interest expense, a debt ratio of 0.42 to 1.00 and a debt rating of A+ by S&P.

Note 3 — Income Taxes

AWR (parent) receives a tax benefit for expenses incurred at the parent-company level. AWR (parent) also recognizes the effect of AWR's consolidated California unitary apportionment, which is beneficial or detrimental depending on a combination of the profitability of AWR's consolidated non-California activities as well as the proportion of its consolidated California sales to total sales.

Note 4 — Dividend from Subsidiaries

Dividends in the amount of \$36.5 million, \$33.8 million and \$62.0 million were paid to AWR (parent) by its wholly owned subsidiaries during the years ended December 31, 2017, 2016 and 2015, respectively.

CONSENT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

We hereby consent to the incorporation by reference in the Registration Statements on Form S-3D (No. 333-155310) and S-8 (Nos. 333-155376, 333-129873, 333-108095, 333-189508, and 333-213049) of American States Water Company of our report dated February 26, 2018 relating to the financial statements, financial statement schedule and the effectiveness of internal control over financial reporting, which appears in this Form 10-K.

/s/ PricewaterhouseCoopers LLP

Los Angeles, California
February 26, 2018

Certification pursuant to Section 302 of the Sarbanes-Oxley Act of 2002 for AWR

I, Robert J. Sprowls, certify that:

- 1) I have reviewed this annual report on Form 10-K of American States Water Company (referred to as “the Registrant”) for the year ended December 31, 2017;
- 2) Based on my knowledge, this report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this report;
- 3) Based on my knowledge, the financial statements, and other financial information included in this report, fairly present in all material respects the financial condition, results of operations and cash flows of the Registrant as of, and for, the periods presented in this report;
- 4) The Registrant’s other certifying officer and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) and internal control over financial reporting (as defined in Exchange Act Rules 13a-15(f) and 15d-15(f)) for the Registrant and have:
 - a) designed such disclosure controls and procedures, or caused such disclosure controls and procedures to be designed under our supervision, to ensure that material information relating to the Registrant, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this report is being prepared;
 - b) designed such internal control over financial reporting, or caused such internal control over financial reporting to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles;
 - c) evaluated the effectiveness of the Registrant’s disclosure controls and procedures and presented in this report our conclusions about the effectiveness of the disclosure controls and procedures, as of the end of the period covered by this report based on such evaluation; and
 - d) disclosed in this report any change in the Registrant’s internal control over financial reporting that occurred during the Registrant’s most recent fiscal quarter (the Registrant’s fourth fiscal quarter in the case of an annual report) that has materially affected, or is reasonably likely to materially affect, the Registrant’s internal control over financial reporting.
- 5) The Registrant’s other certifying officer and I have disclosed, based on our most recent evaluation of internal control over financial reporting, to the Registrant’s auditors and the audit committee of Registrant’s board of directors (or persons performing the equivalent function):
 - a) all significant deficiencies and material weaknesses in the design or operation of internal control over financial reporting which are reasonably likely to adversely affect the Registrant’s ability to record, process, summarize and report financial information; and
 - b) any fraud, whether or not material, that involves management or other employees who have a significant role in the Registrant’s internal controls over financial reporting.

An Essential **Element**

American States Water Company American States Water Company is the parent of Golden State Water Company and American States Utility Services, Inc. Through its utility subsidiary, Golden State Water Company, the Company provides water service to customers located within communities in Northern, Coastal and Southern California. The Company's Bear Valley Electric Service, a division of Golden State Water Company, distributes electricity to customers in the City of Big Bear Lake and surrounding areas in San Bernardino County, California. Through its contracted services subsidiary, American States Utility Services, Inc., the Company provides operations, maintenance, and construction management services for water and wastewater systems located on U.S. military bases. American States Water Company common stock trades on the New York Stock Exchange under the symbol AWR.

Essential to communities. And to investors.

Two hydrogen atoms plus a single atom of oxygen. Basic elements that add up to something far greater. Something essential.

The companies of American States Water are essential in their own way—to the communities we serve, and to the portfolios of investors who believe in strong, long-term value. In 2017, we worked hard to continue our 88-year tradition of providing exceptional service to our customers and value to our shareholders.

Element 01

Cy

Community

Golden State
Water Company
A Subsidiary of American States Water Company
www.gswater.com

Element 01: Part of the community.

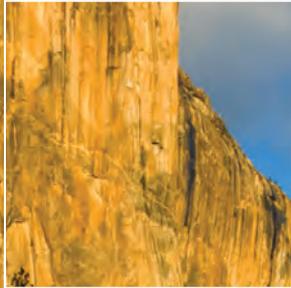

Our businesses deliver basic necessities to towns, cities and military installations in nine U.S. states. The more we connect with the people we serve, the better able we are to meet their needs. Our subsidiary Golden State Water Company supports local nonprofit organizations, giving to the organizations our employees identified as making a difference where they live. We also spent more time collaborating with municipal leaders to make sure we're all working as cooperatively as possible toward the same goal: providing safe, clean, dependable water at an affordable price.

Element 02: Part of the support for our nation's defense.

In 2017, American States Utility Services, our contracted services subsidiary, was awarded a 50-year contract to operate and maintain the water, wastewater and related treatment facilities at Fort Riley, Kansas. The value of the contract: approximately \$601 million. This milestone enables us to bring outstanding service to more people, as we increase value for shareholders, and further positions us for future growth. We are proud to serve several of the U.S. military's largest installations, and 11 bases in total.

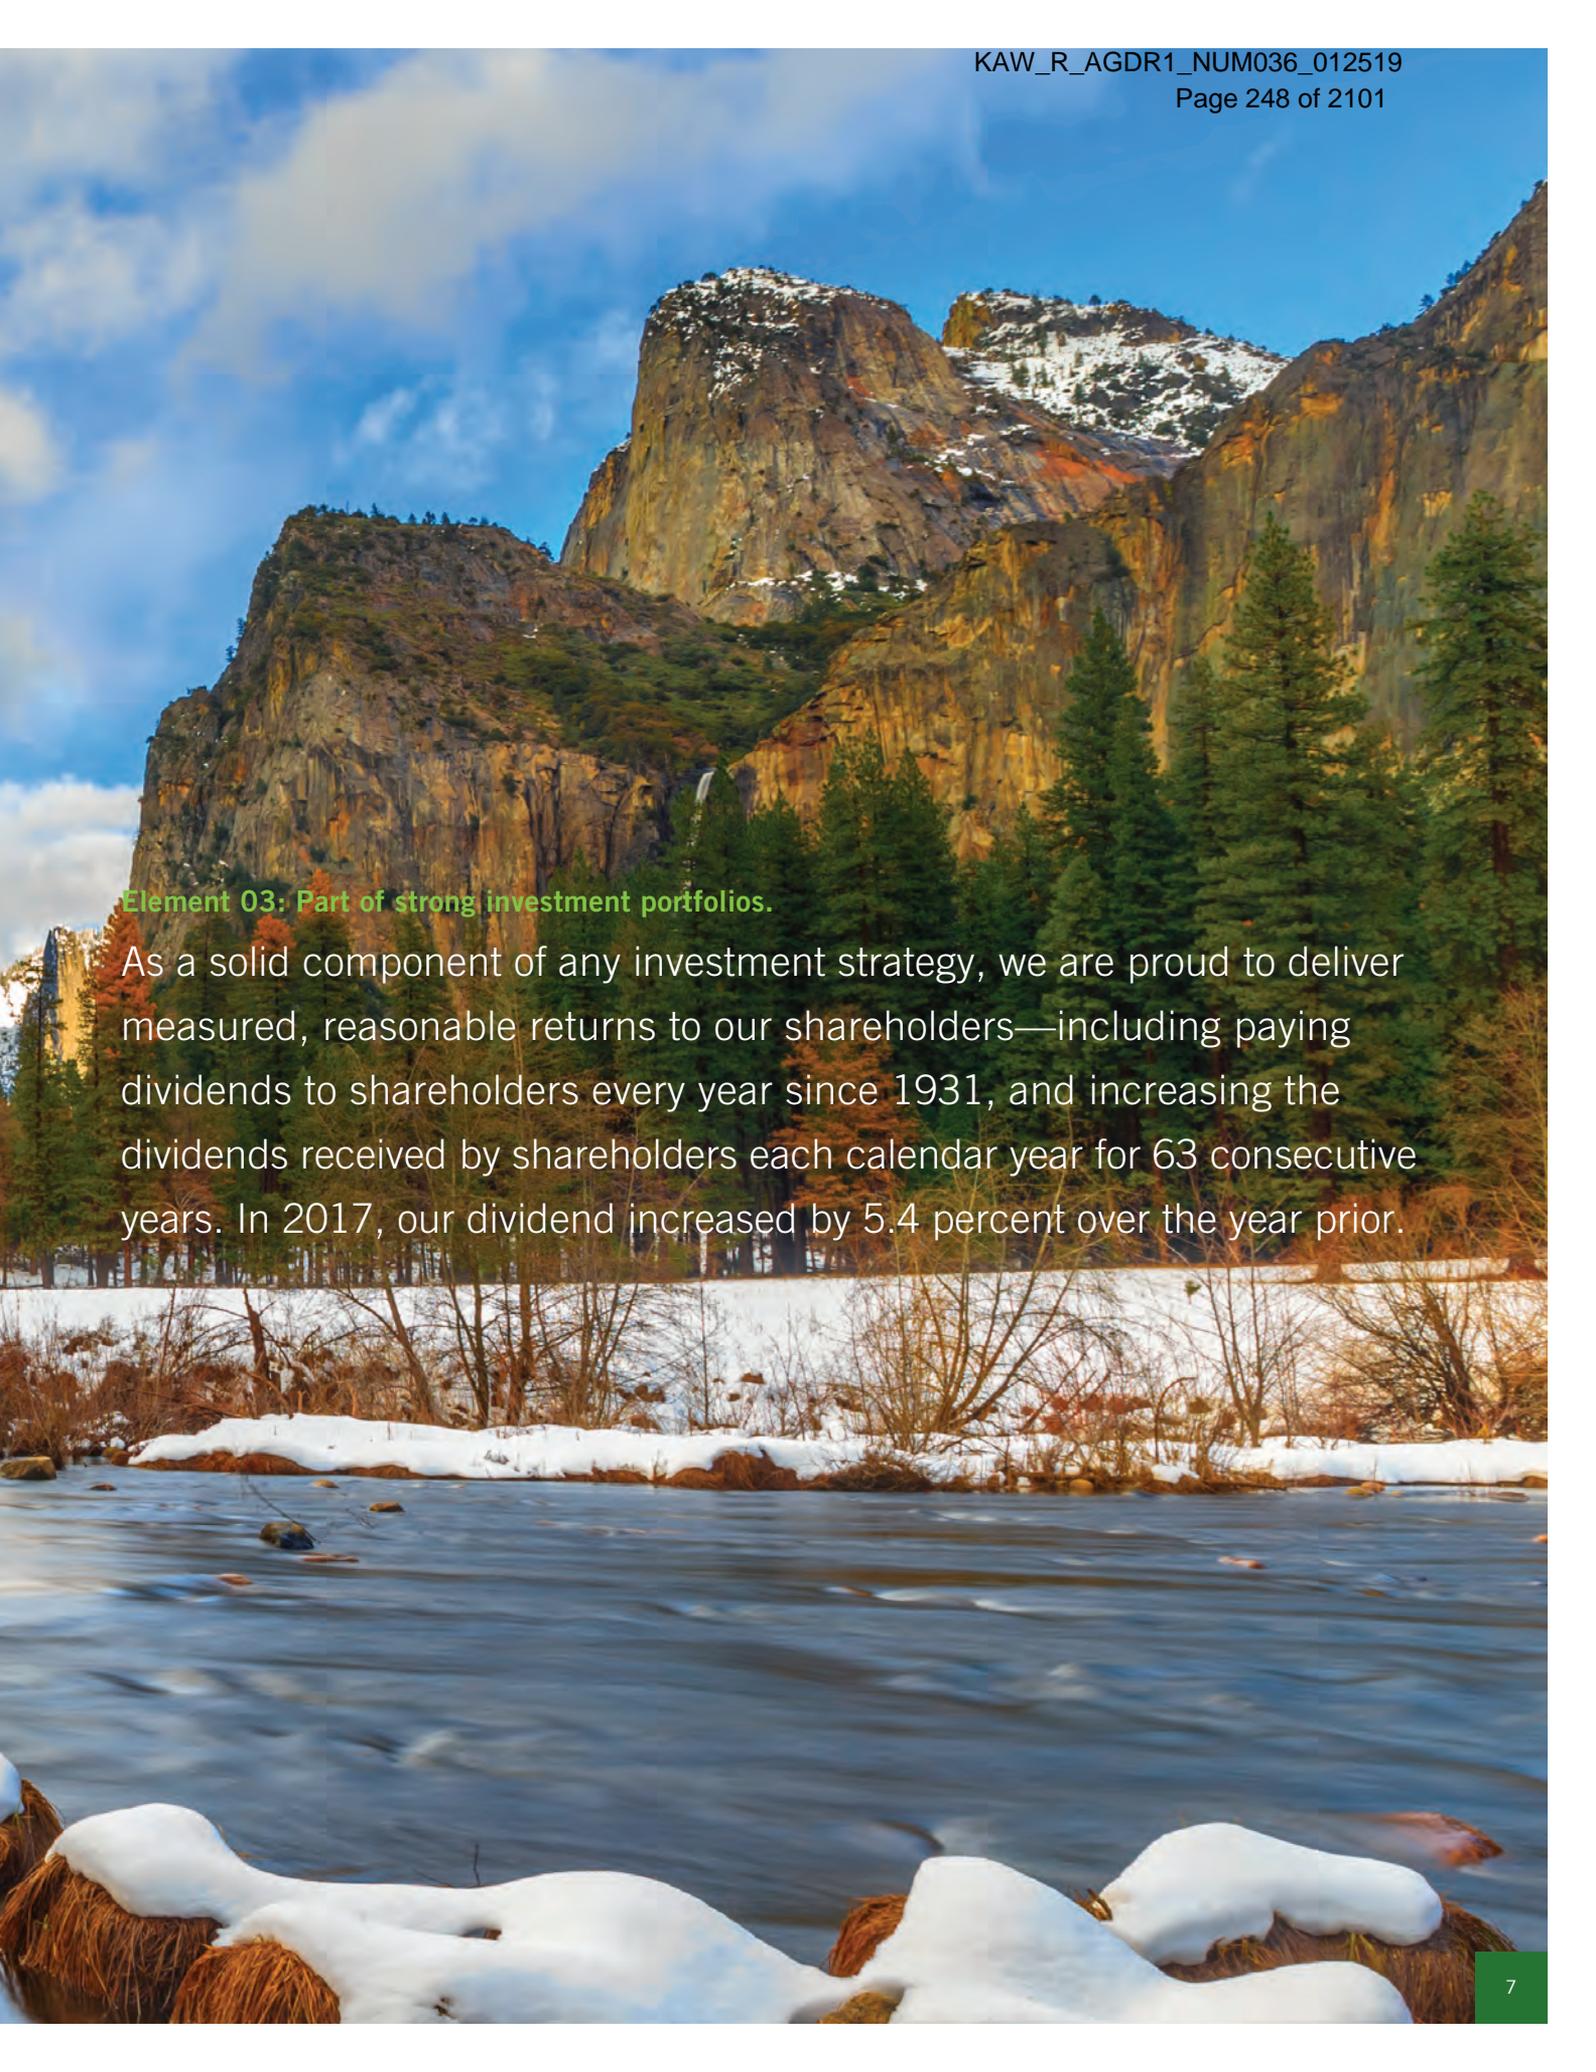

Element 03

St

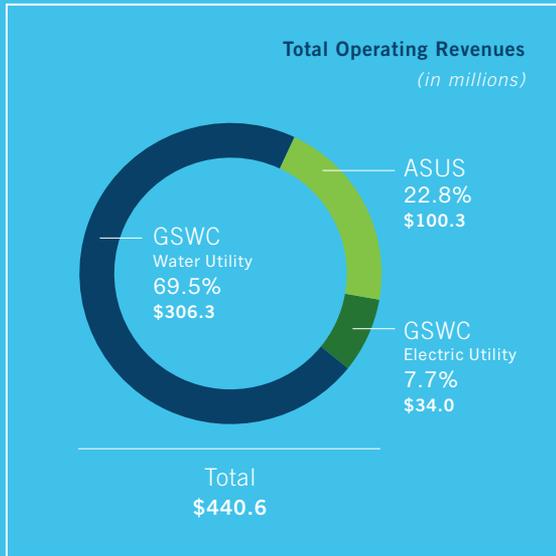

Strong Investment

Element 03: Part of strong investment portfolios.

As a solid component of any investment strategy, we are proud to deliver measured, reasonable returns to our shareholders—including paying dividends to shareholders every year since 1931, and increasing the dividends received by shareholders each calendar year for 63 consecutive years. In 2017, our dividend increased by 5.4 percent over the year prior.

American States Water Company

Letter to Our Shareholders

DEAR SHAREHOLDERS:

Our aim is for the companies of American States Water to be essential to the communities we serve—not only by delivering safe, dependable, and affordable water, wastewater, and electric service to thousands of customers, but also by contributing to a high quality of life through our business operations and through the contributions of our employees.

We also work continually to make American States Water an attractive investment, consistently delivering returns for well over eight decades.

The past year offers many examples of how American States Water provided value for our customers, our communities, and our shareholders alike. We are pleased to share some of them here.

FINANCIAL RESULTS

American States Water produced a year of solid financial performance in 2017 from its two first-tier subsidiaries: Golden State Water Company (GSWC), our regulated water and electric utility, and American States Utility Services, Inc. (ASUS), our contracted services business. Excluding a \$0.13 per share gain on the sale of our Ojai water system, we earned \$1.75 per fully diluted share and achieved a consolidated return on equity for the year of 12.7%, all while increasing our dividend by 5.4%, continuing a record of 63 consecutive years of annual dividend increases. Our strategy is simple – continue to grow both our water utility business in California and our water and wastewater services presence on military bases around the country.

2017 KEY DEVELOPMENTS

- Our water and electric utilities continue to invest in maintaining and improving the reliability of our systems. During 2017, GSWC invested \$111.4 million in infrastructure in addition to the \$120.7 million spent in 2016. Capital expenditures at Bear Valley Electric Service, our electric utility division of GSWC, accounted for approximately \$6.0 million of the 2017 amount. Our utilities reinvested nearly all of their cash from operations into infrastructure during the year.
- GSWC's water utility segment filed a general rate case with the California Public Utilities Commission (CPUC) for all of its ratemaking areas and the general office to determine

new rates for 2019-2021, with a final decision expected at the end of 2018. The water segment requested approval for capital expenditures of \$125 million per year, in keeping with the obligation and commitment to our customers of maintaining and improving the reliability of our systems. GSWC's electric utility filed its general rate case for 2018-2021, requesting approximately \$40 million of capital expenditures over the four-year period. A final decision is expected in 2018 with rates retroactive to January 1, 2018.

- In September, ASUS was awarded a 50-year contract by the U.S. government to operate, maintain, and provide construction management services for the water distribution, wastewater collection, and treatment facilities at Fort Riley, a United States Army installation located in Kansas. The value of the contract is approximately \$601 million over its life, and we expect to begin managing the systems in 2018. This is the second year in a row that ASUS received the largest military privatization contract awarded by the U.S. government for water and wastewater systems. The award of the Fort Riley contract brings the total number of bases that we serve to 11.
- In June, ASUS took over the operations, maintenance and construction management services for the water and wastewater systems at Eglin Air Force Base in Florida. Eglin is the largest Air Force installation in the continental United States in terms of land mass, and the value of the 50-year contract is approximately \$702 million over its life. Total price adjustments received in 2017 for all base locations served by ASUS provided an annualized increase of approximately \$5.3 million in contract fees over the year-end 2016 levels.
- GSWC heavily promotes conservation through customer education, free water conservation kits, customer rebates and programs, and tiered rates. The CPUC authorized both the water and electric utility business segments to establish revenue adjustment mechanisms to decouple revenues from sales to ensure that conservation resulting from the tiered rates would not compromise reliable operations and necessary capital investments. Due to our continuing efforts in conservation, total billed water usage by GSWC customers is down approximately 30% since 2007 before implementing tiered rates, while the number of customers has increased during this same period.

- GSWC successfully resolved two condemnation-related matters. First, in order to resolve an eminent domain action and other litigation, we sold our 2,900-connection Ojai water system. As a result, we recognized a pretax gain of \$8.3 million during the year, or \$0.13 per share. We also reached a settlement agreement with the City of Claremont on its reimbursement of the Company's legal fees incurred in defending against the City's eminent domain lawsuit. As a result, the City dropped its appeal of the 2016 court decision that rejected Claremont's lawsuit against the Company.
- ASUS continued to play a significant role for the Company during the year, contributing \$0.37 per share, or approximately 21% of consolidated earnings (adjusted for the gain on the Ojai sale) and 23% of consolidated revenues, and achieving a higher return on investment than our well-performing regulated utilities.
- GSWC's spend with diverse suppliers for 2017 was 29.7%. This was well above the 21.5% spending target established by the CPUC. In addition, GSWC met the CPUC's spending targets with each of the three major categories of diverse vendors: (i) minority-owned, (ii) woman-owned, and (iii) disabled veteran-owned business enterprises.
- ASUS annually receives additional funding from the U.S. government for new construction projects. During the year, ASUS was awarded \$20 million of additional projects, the majority of which are expected to be completed through 2018.
- During the year, Standard & Poor's Ratings Services affirmed its A+ ratings on American States Water and Golden State Water Company, and Moody's Investors Service affirmed its A2 rating on GSWC and improved its outlook from stable to positive. These are some of the highest credit ratings in the water utility industry, and they allow us to borrow at low rates to fund our capital and operational needs.
- There is strength in diversity. We are proud that four of the nine members of our board of directors are female. We also have a diverse executive management team, as well as a workforce that is representative of the communities we serve.

ABOVE-MARKET RETURNS TO SHAREHOLDERS OVER THE LONG TERM

Our common stock achieved a total shareholder return of 29.8% for 2017, which was higher than the S&P 500's 2017 return of 21.8%. Our common stock has achieved a compound annual return of 22.2% over the five-year period (2013-2017),

significantly above the 14.7% annual return achieved by the S&P 500 over that same time period.

63RD CONSECUTIVE YEAR OF DIVIDEND INCREASES

2017 marked the 63rd consecutive year of increases in our annual dividend, placing us in an exclusive group of companies on the New York Stock Exchange that have achieved that result. In fact, AWR was recently added to the S&P High Yield Dividend Aristocrats Index. Our goal is to increase our dividend at a compound annual growth rate of more than 5% over the long term. Our 2017 dividend-to-earnings payout ratio, excluding the gain on the sale of the Ojai water system, was 57%, which is below the average payout ratio for those utilities with which we compete for capital. Given the current low payout ratio and earnings growth potential, we believe that American States Water is well positioned for future dividend growth.

GOLDEN STATE WATER COMPANY: A STRATEGY THAT WORKS

GSWC remains our flagship subsidiary, as it is responsible for our water and electric utility operations. During 2017 it accounted for approximately 77% of American States Water's consolidated revenues and 76% of consolidated net income. The key tenets of GSWC's strategy continue to include: (i) delivering outstanding customer service; (ii) driving operational efficiency to minimize costs to our customers; (iii) making prudent capital additions and infrastructure investments; (iv) maintaining a strong water supply portfolio; (v) establishing a rate structure that provides the right customer incentives for conservation; and (vi) purchasing goods and services from diverse vendors.

Delivering Outstanding Customer Service Throughout the year, our operating team continued to uphold our high standard of operational excellence. Providing safe and reliable water and electric service to our customers is vital, as is our commitment to outstanding customer service. We operate a call center 24 hours a day, 7 days a week and 365 days per year, ensuring that our customers' problems are resolved quickly. We think it is critical that when customers have a problem with their water or electric service, they are able to contact us at any time of day. In addition, we maintain regular communications with our customers regarding our programs for capital investment, conservation, water quality and our community involvement. We are committed to being a respected community partner and we want to help the communities we serve. We continually look at ways to implement technology to better serve customers. In 2017, we began implementing a mobile workforce management system that allows us to serve customers more quickly and at lower cost. Full implementation of the system was completed in early 2018.

Driving Operational Efficiency to Minimize Costs to Our Customers

We continually review our processes to ensure their efficiency so that we can improve our water and electric systems by investing in needed infrastructure. GSWC has centralized the procurement function and standardized and streamlined our procurement processes, which included the implementation of an e-bidding application. This application not only significantly improved our internal procurement processes, but also streamlined the process by which we engage our vendors in bidding activities. Our focus on efficiency also includes deploying technology on our customer facing activities. The deployment of the mobile workforce management system mentioned earlier will not only eliminate many of the manual tasks associated with over 240,000 customer service field transactions per year, but will improve our overall deployment of physical resources and service levels.

Making Prudent Capital Additions and Infrastructure Investments

We are proactive and take great pride in keeping our systems reliable and running efficiently. Customers expect to receive safe, uninterrupted water and electric service. Our capital investment program is a critical factor in delivering consistent, high-quality service to all our customers, as well as improving safety. GSWC invested \$111.4 million in company-funded, necessary infrastructure work during 2017. At GSWC, we recover our capital expenditures through depreciation expense and a return on our rate base. In 2017, the amount we invested in our water and electric infrastructure was more than three times depreciation expense. Over the past five years, GSWC's net utility plant has increased from \$913.1 million at the end of 2012 to \$1.198 billion at the end of 2017, an annual compound growth rate of 5.6%.

Maintaining a Strong Water Supply Portfolio Facing the possibility of periodic drought conditions in California, we continue to closely monitor our water supplies to ensure a robust water supply portfolio for the future. GSWC owns 74,300 acre-feet of adjudicated groundwater rights and a significant number of unadjudicated groundwater rights. In addition, GSWC owns 11,300 acre-feet of surface water rights. We remain intent on preserving the ever-increasing value of these water rights to serve our customers.

Establishing a Rate Structure That Provides the Right Incentives for Conservation

GSWC heavily promotes conservation through conservation/tiered rates, education, free water conservation kits, customer rebates and programs, and meter

installation. A strong conservation program encourages customers to use less water and electricity. In addition, with the CPUC's encouragement, GSWC has a tiered structure in its water and electric rates to promote conservation. The tiered water rates were implemented to meet conservation goals, and the CPUC authorized both the water and electric utility business segments to establish revenue adjustment mechanisms to decouple revenues from sales to ensure that conservation would not compromise reliable operations and necessary capital investments. Due to our conservation programs, the implementation of the tiered rate design, public awareness of the need for Californians to conserve, and the residual effects of the 2016 mandatory usage reductions imposed by California's Governor, GSWC's billed water sales in 2017 were approximately 30% lower than water sales in 2007 since implementing our tiered rates in 2008.

Water conservation has not been our only commitment to protecting our environment. We also secured the purchase of green energy as part of our supply portfolio to serve GSWC's electric customers. We have a 10-year agreement for renewable resources, allowing our electric segment to meet the CPUC's Renewables Portfolio Standard requirements. In addition, we have implemented energy-efficiency and solar-initiative programs, which were approved by the CPUC.

Purchasing Goods and Services from Diverse Vendors

GSWC is committed to seeking and identifying diverse suppliers and offering equitable opportunities to all potential business partners. It is our strategic business decision to broaden the supplier base, stimulate competition and ensure that GSWC receives the highest-quality materials and services at the best available prices. 2017 was the fifth consecutive year that GSWC exceeded the overall goal established by the CPUC for spending with diverse suppliers. We have increased our percentage of spend with these suppliers from 7.3% in 2004, when we started our Supplier Diversity Program, to 29.7% in 2017. In addition, GSWC met the CPUC's spending targets for each of the three major categories of diverse vendors: (i) minority-owned, (ii) woman-owned, and (iii) disabled veteran-owned business enterprises.

ASUS: A SUCCESSFUL YEAR AND POISED FOR ADDITIONAL GROWTH

ASUS has 50-year contracts with the U.S. government to perform operations, maintenance, and capital construction activities on water and/or wastewater systems at 11 military bases. The latest base addition was Fort Riley, for which ASUS will assume

responsibility for the water and wastewater operations in 2018. This subsidiary had another strong year in 2017, generating operating revenues of \$100.3 million and pretax operating income of \$21.1 million, and contributing \$0.37 per share to consolidated earnings. ASUS earns a profit on both operating and maintaining the systems and its construction activities. ASUS provides American States Water with opportunities to improve companywide returns, grow the Company, diversify risk, and contribute to funding dividends to shareholders. ASUS has also given the Company the opportunity to proudly serve the men and women in our nation's military.

Our strategy for ASUS is to increase the size and scope of our operations through (i) further developing opportunities on the bases we currently serve and (ii) actively pursuing bases still to be privatized.

Further Developing Opportunities on the Bases We Currently Serve We continue to enhance our relationship with the U.S. government, consistently receiving high marks for our customer service, business relations and adherence to the schedule for capital construction. We continue to exceed our customer's requirements for small business utilization. In fact, ASUS's spending with qualified small businesses exceeded 85% of total spending in 2017.

During 2017, ASUS spent almost \$50 million of direct construction cost in renewing, replacing, expanding, and modernizing water and wastewater infrastructure on various military bases. Unlike GSWC, which earns a return on its rate base, ASUS earns a profit on its construction activities. In addition to ongoing renewal and replacement construction projects, ASUS continues to receive funding from the U.S. government for new construction projects at the military bases we serve. ASUS has been very focused on presenting necessary new projects to the government and achieving operational efficiency to improve its financial performance. During the year, ASUS also worked closely with the government to conclude numerous economic price adjustments. These successful results enable ASUS to continue growing its earnings and contributing to future dividends.

Actively Pursuing Bases Still to Be Privatized Winning new military base privatizations is a key growth initiative for the Company. We aggressively pursue solicitations from the U.S. government on military bases where the water and wastewater utilities are in the process of being privatized in an effort to increase ASUS's footprint in the utility privatization industry

and to continue to be recognized as one of the premier providers of water and wastewater services. We have the in-house capability to respond to multiple, simultaneous requests for proposals from the U.S. government in a cost-effective manner. We anticipate continued privatization opportunities by the U.S. government over the next five years and expect ASUS to be successful in winning our share of the new bases.

SUSTAINABILITY AND COMMUNITY ENGAGEMENT

Corporate sustainability, as well as Environmental, Social and Governance issues, have always been important to the Company, but they have grown in importance to the public and investors alike. We have increased our reporting in these areas to communicate our efforts in a wide range of areas, from conservation to human capital management and much more. Please review our Corporate Social Responsibility report at www.aswater.com for details.

We strive to be a positive corporate partner to the communities and military bases we serve. At GSWC, we have a comprehensive Community Engagement Program, with commitments for service hours and philanthropic giving. At ASUS, we continue to assist with military programs and events around the country which benefit retired and active-duty military and their families.

On behalf of everyone at American States Water Company and its subsidiaries, we thank you for your continued trust and support.

Sincerely,

Lloyd E. Ross
Chairman of the Board

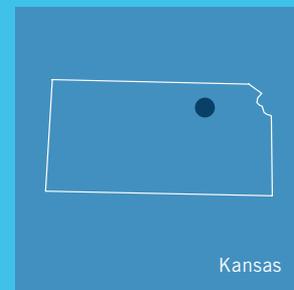

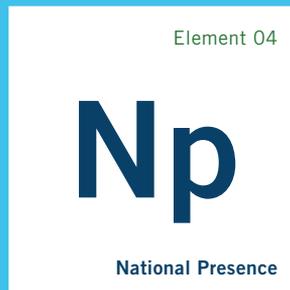

Robert J. Spowls
President and CEO

Element 04: Part of a proud national presence.

American States Water Company and its Subsidiaries

American States Water Company and Golden State Water Company Headquarters

GOLDEN STATE WATER COMPANY

Golden State Water Company provides water service to customers located throughout 10 counties in Northern, Coastal, and Southern California, as well as distributes electricity to customers in the Big Bear recreational area of California. Our customers reside in the following areas:

| | Customers |
|--|----------------|
| Northern District | |
| Arden / Rancho Cordova | 16,891 |
| Bay Point | 5,079 |
| Clearlake | 2,083 |
| Coastal District | |
| Los Osos | 3,293 |
| Santa Maria | 14,709 |
| Simi Valley | 13,538 |
| Central District – Los Angeles County | |
| Central Basin East | 20,224 |
| Central Basin West | 20,345 |
| Culver City | 9,689 |
| Southwest District – Los Angeles County | |
| Southwest | 52,788 |
| Foothill District | |
| Claremont | 11,248 |
| San Dimas | 16,215 |
| San Gabriel | 12,450 |
| Mountain/Desert District | |
| Apple Valley / Victorville | 2,976 |
| Barstow | 9,122 |
| Calipatria | 1,179 |
| Morongo Valley | 976 |
| Wrightwood | 2,762 |
| Orange County District | |
| Los Alamitos | 27,797 |
| Placentia | 15,585 |
| BEAR VALLEY ELECTRIC SERVICE | |
| | 24,274 |
| TOTAL | 283,223 |

AMERICAN STATES UTILITY SERVICES, INC. HEADQUARTERS

American States Utility Services, Inc. provides operation and maintenance and capital construction and improvements (collectively, “services”) of potable water and wastewater systems under 50-year privatization contracts with the U.S. government as identified below:

Maryland

Terrapin Utility Services, Inc. provides services to the United States Air Force and Navy at Joint Base Andrews in Maryland.

Virginia

In Virginia, Old Dominion Utility Services, Inc. provides services to the United States Air Force and Army at Joint Base Langley-Eustis, the United States Navy and Army at Joint Expeditionary Base Little Creek-Fort Story, along with wastewater services to the United States Army at Fort Lee.

North Carolina

Old North Utility Services, Inc. provides services to the United States Army in North Carolina at Fort Bragg, Pope Army Airfield and Camp Mackall.

South Carolina

Palmetto State Utility Services, Inc. provides services to the United States Army at Fort Jackson in South Carolina.

Texas/New Mexico

Fort Bliss Water Services Company provides services to the United States Army at the Fort Bliss military installation in El Paso, Texas. The service area also includes Dona Ana, MacGregor, and Myers Range Camps located in New Mexico.

Florida

Emerald Coast Utility Services, Inc. provides services to the United States Air Force at Eglin Air Force Base in Florida.

Kansas

Fort Riley Utility Services, Inc. will provide services to the United States Army at Fort Riley in Kansas, and is expected to begin operation in 2018 pursuant to a contract issued in September 2017.

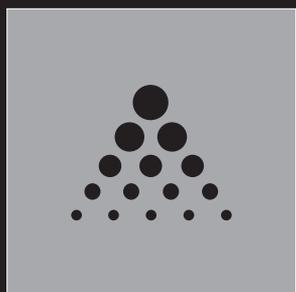

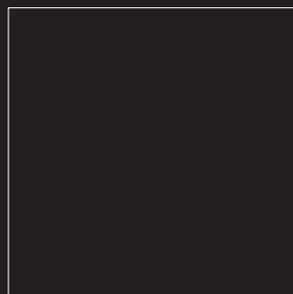

American States Water Company

PART I**Item 1. Business**

This annual report on Form 10-K is a combined report being filed by two separate Registrants, American States Water Company (“AWR”) and Golden State Water Company (“GSWC”). References in this report to “Registrant” are to AWR and GSWC, collectively, unless otherwise specified. GSWC makes no representations as to the information contained in this report relating to AWR and its subsidiaries, other than GSWC.

AWR makes its periodic reports, Form 10-Q and Form 10-K, and current reports, Form 8-K, available free of charge through its website, www.aswater.com, as soon as material is electronically filed with or furnished to the Securities and Exchange Commission (“SEC”). Such reports are also available on the SEC’s website at www.sec.gov. AWR also makes available free of charge its code of business conduct and ethics, its corporate governance guidelines and the charters of its Nominating and Governance Committee, Compensation Committee, and Audit and Finance Committee through its website or by calling (877) 463-6297. AWR and GSWC have filed the certification of officers required by Section 302 of the Sarbanes-Oxley Act as Exhibits 31.1 and 31.2 to its Form 10-K for the year ended December 31, 2017.

Overview

AWR is the parent company of GSWC and American States Utility Services, Inc. (“ASUS”) (and its wholly owned subsidiaries: Fort Bliss Water Services Company (“FBWS”), Terrapin Utility Services, Inc. (“TUS”), Old Dominion Utility Services, Inc. (“ODUS”), Palmetto State Utility Services, Inc. (“PSUS”), Old North Utility Services, Inc. (“ONUS”), Emerald Coast Utility Services, Inc. (“ECUS”) and Fort Riley Utility Services, Inc. (“FRUS”). AWR was incorporated as a California corporation in 1998 as a holding company. AWR has three reportable segments: water, electric and contracted services. Within the segments, AWR has two principal business units, water and electric service utility operations, conducted through GSWC, and contracted services conducted through ASUS and its subsidiaries. FBWS, TUS, ODUS, PSUS, ONUS, ECUS and FRUS may be referred to herein collectively as the “Military Utility Privatization Subsidiaries.”

GSWC is a public utility engaged principally in the purchase, production, distribution and sale of water in 10 counties in the State of California. GSWC is regulated by the California Public Utilities Commission (“CPUC”). It was incorporated as a California corporation on December 31, 1929. GSWC also distributes electricity in several San Bernardino County mountain communities in California through its Bear Valley Electric Service (“BVES”) division.

GSWC served 258,949 water customers and 24,274 electric customers at December 31, 2017, or a total of 283,223 customers, compared with 261,002 water customers and 23,940 electric customers at December 31, 2016, or a total of 284,942 customers. GSWC’s operations exhibit seasonal trends. Although GSWC’s water utility operations have a diversified customer base, residential and commercial customers account for the majority of GSWC’s water sales and revenues. Revenues derived from commercial and residential water customers accounted for approximately 90% of total water revenues for the years ended December 31, 2017, 2016 and 2015.

ASUS, itself or through the Military Utility Privatization Subsidiaries, has contracted with the U.S. government to provide water and/or wastewater services at various military installations. ASUS operates, maintains and performs construction activities (including renewal and replacement capital work) on water and/or wastewater systems at various U.S. military bases pursuant to 50-year firm, fixed-price contracts. Each of the contracts with the U.S. government is subject to termination, in whole or in part, prior to the end of its 50-year term for convenience of the U.S. government or as a result of default or nonperformance by the subsidiary performing the contract. The contract price for each of these contracts is subject to annual economic price adjustments. Contracts are also subject to modifications for changes in circumstances, changes in laws and regulations and additions to the contract value for new construction of facilities at the military bases. AWR guarantees performance of ASUS’s military privatization contracts. Pursuant to the terms of these contracts, the Military Utility Privatization Subsidiaries operate the following water and wastewater systems:

| Subsidiary | Military Base | Type of System | Location |
|------------|--|----------------------|--|
| FBWS | Fort Bliss | Water and Wastewater | Near El Paso, Texas and extending into southeastern New Mexico |
| TUS | Joint Base Andrews | Water and Wastewater | Maryland |
| ODUS | Fort Lee | Wastewater | Virginia |
| ODUS | Joint-Base Langley Eustis and Joint Expeditionary Base Little Creek-Fort Story | Water and Wastewater | Virginia |
| PSUS | Fort Jackson | Water and Wastewater | South Carolina |
| ONUS | Fort Bragg, Pope Army Airfield and Camp Mackall | Water and Wastewater | North Carolina |
| ECUS | Eglin Air Force Base | Water and Wastewater | Florida |
| FRUS | Fort Riley* | Water and Wastewater | Kansas |

*ASUS is expected to begin operations at Fort Riley in 2018 pursuant to a contract awarded in September 2017.

Certain financial information for each of AWR's business segments - water distribution, electric distribution, and contracted services - is set forth in Note 15 to the Notes to Consolidated Financial Statements of American States Water Company and its subsidiaries. AWR's water and electric utility segments are not dependent upon a single or only a few customers. The U.S. government is the primary customer for ASUS's contracted services. ASUS, from time to time, performs work at military bases for other prime contractors of the U.S. government.

A large portion of the revenue from AWR's segments is seasonal. The impact of seasonality on these AWR businesses is discussed in more detail in Item 1A. "*Risk Factors.*"

Environmental matters and compliance with such laws and regulations are discussed in detail in Item 7. "*Management's Discussion and Analysis of Financial Condition and Results of Operation*" under the section titled "Environmental Matters."

Competition

The businesses of GSWC are substantially free from direct and indirect competition with other public utilities, municipalities and other public agencies within their existing service territories. However, GSWC may be subject to eminent domain proceedings in which governmental agencies, under state law, may acquire GSWC's water systems if doing so is necessary and in the public's interest. GSWC competes with governmental agencies and other investor-owned utilities in connection with offering service to new real estate developments on the basis of financial terms, availability of water and ability to commence providing service on a timely basis. ASUS actively competes for business with other investor-owned utilities, other third-party providers of water and/or wastewater services and governmental entities primarily on the basis of quality of service and price.

AWR Workforce

AWR and its subsidiaries had a total of 758 employees as of January 31, 2018. GSWC had 549 employees as of January 31, 2018. Fifteen employees of BVES are covered by a collective bargaining agreement with the International Brotherhood of Electrical Workers, which expires in December 2020.

ASUS had 209 employees as of January 31, 2018. Fifteen of FBWS's employees are covered by a collective bargaining agreement with the International Union of Operating Engineers. This agreement expires in September 2020.

Forward-Looking Information

This Form 10-K and the documents incorporated herein contain forward-looking statements intended to qualify for the “safe harbor” from liability established by the Private Securities Litigation Reform Act of 1995. Forward-looking statements are based on current estimates, expectations and projections about future events and assumptions regarding these events and include statements regarding management’s goals, beliefs, plans or current expectations, taking into account the information currently available to management. Forward-looking statements are not statements of historical facts. For example, when we use words such as “anticipate,” “believe,” “plan,” “estimate,” “expect,” “intend,” “may” and other words that convey uncertainty of future events or outcomes, we are making forward-looking statements. We are not able to predict all the factors that may affect future results. We caution you that any forward-looking statements made by us are not guarantees of future performance and the actual results may differ materially from those in our forward-looking statements. Some of the factors that could cause future results to differ materially from those expressed or implied by our forward-looking statements or from historical results, include, but are not limited to:

- the outcome of pending and future regulatory, legislative or other proceedings, investigations or audits, including decisions in GSWC's general rate cases and the results of independent audits of GSWC's construction contracting procurement practices or other independent audits of our costs;
- changes in the policies and procedures of the CPUC;
- timeliness of CPUC action on GSWC rates;
- availability of GSWC's water supplies, which may be adversely affected by drought, changes in weather patterns, contamination, and court decisions or other governmental actions restricting the use of water from the Colorado River, the California State Water Project, and/or pumping of groundwater;
- wildfires in our electric division's service territory, as well as court decisions and regulatory actions that may affect our ability to recover the costs associated with such events or the defense or payment of resulting claims;
- our ability to efficiently manage GSWC capital expenditures and operating and maintenance expenses within CPUC authorized levels and timely recover our costs through rates;
- the impact of opposition to GSWC rate increases on our ability to recover our costs through rates, including costs associated with construction of pipelines to connect to alternative sources of water, new wells to replace wells that are no longer in service (or are otherwise inadequate to meet the needs of GSWC's customers), and other facilities to conserve or reclaim water;
- the impact of opposition by GSWC customers to rate increases associated with tiered rate structures as well as potential future restrictions on water use mandated in California, which decreases adopted usage and increases customer rates;
- the impact of condemnation actions on future GSWC revenues and other aspects of our business if we do not receive adequate compensation for the assets taken, or recovery of all charges associated with the condemnation of such assets, and the impact on future revenues if we are no longer entitled to any portion of the revenues generated from such assets;
- liabilities of GSWC associated with the inherent risks of damage to private property and injuries to employees and the public if our or their property should come into contact with electrical current or equipment, including through downed power lines or equipment malfunctions if safe construction and maintenance work sites are not maintained;
- our ability to forecast the costs of maintaining GSWC’s aging water and electric infrastructure;
- our ability to recover increases in permitting costs and costs associated with negotiating and complying with the terms of our franchise agreements with cities and counties and other demands made upon us by the cities and counties in which GSWC operates;
- changes in accounting valuations and estimates, including changes resulting from our assessment of anticipated recovery of GSWC's regulatory assets, settlement of liabilities and revenues subject to refund or regulatory disallowances and the timing of such recovery, and the amounts set aside for uncollectible accounts receivable,

inventory obsolescence, pensions and post-retirement liabilities, taxes and uninsured losses and claims, including general liability and workers' compensation claims;

- changes in environmental laws, health and safety laws and water and recycled water quality requirements and increases in costs associated with complying with these laws and requirements, including costs associated with GSWC's upgrading and building new water treatment plants, GSWC's disposing of residuals from our water treatment plants, handling and storing hazardous chemicals, compliance monitoring activities and GSWC's securing alternative water supplies when necessary;
- our ability to obtain adequate, reliable and cost-effective supplies of chemicals, electricity, fuel, water and other raw materials that are needed for our water and wastewater operations;
- our ability to attract, retain, train, motivate, develop and transition key employees;
- our ability to recover the costs associated with any contamination of GSWC's groundwater supplies from parties responsible for the contamination or through the ratemaking process, and the time and expense incurred by us in obtaining recovery of such costs;
- the breakdown or failure of equipment at GSWC's electric division that can cause fires and unplanned electric outages, and whether GSWC will be subject to investigations, penalties, liabilities to customers or other third parties or other costs in connection with such events;
- adequacy of our electric division's power supplies and the extent to which we can manage and respond to the volatility of electricity and natural gas prices;
- our electric division's ability to comply with the CPUC's renewable energy procurement requirements;
- changes in GSWC long-term customer demand due to changes in customer usage patterns as a result of conservation efforts, regulatory changes affecting demand such as mandatory restrictions on water use, new landscaping or irrigation requirements, recycling of water by customers or purchase of recycled water supplied by other parties, unanticipated population growth or decline, changes in climate conditions, general economic and financial market conditions and cost increases, which may impact our long-term operating revenues if we are unable to secure rate increases in an amount sufficient to offset reduced demand;
- changes in accounting treatment for regulated utilities;
- effects of changes in or interpretations of tax laws, rates or policies;
- changes in estimates used in ASUS's cost-to-cost method for revenue recognition of certain construction activities;
- termination, in whole or in part, of one or more of our military utility privatization contracts to provide water and/or wastewater services at military bases for the convenience of the U.S. government or for default;
- suspension or debarment for a period of time from contracting with the government due to violations of laws or regulations in connection with military utility privatization activities;
- delays by the U.S. government in making timely payments to ASUS for water and/or wastewater services or construction activities at military bases because of fiscal uncertainties over the funding of the U.S. government or otherwise;
- delays in obtaining economic price or equitable adjustments to our prices on one or more of our contracts to provide water and/or wastewater services at military bases;
- disallowance of costs on any of our contracts to provide water and/or wastewater services at military bases because of audits, cost reviews or investigations by contracting agencies;
- inaccurate assumptions used in preparing bids in our contracted services business;
- failure of the wastewater systems that we operate on military bases resulting in untreated wastewater or contaminants spilling into nearby properties, streams or rivers;

- failure to comply with the terms of our military privatization contracts;
 - failure of any of our subcontractors to perform services for us in accordance with the terms of our military privatization contracts;
 - competition for new military privatization contracts;
 - issues with the implementation, maintenance or upgrading of our information technology systems;
 - general economic conditions which may impact our ability to recover infrastructure investments and operating costs from customers;
 - explosions, fires, accidents, mechanical breakdowns, the disruption of information technology and telecommunication systems, human error and similar events that may occur while operating and maintaining water and electric systems in California or operating and maintaining water and wastewater systems on military bases under varying geographic conditions;
 - the impact of storms, earthquakes, floods, mudslides, drought, wildfires, disease and similar natural disasters, or acts of terrorism or vandalism, that affect customer demand, that damage or disrupt facilities, operations or information technology systems owned by us, our customers or third parties on whom we rely or that damage the property of our customers or other third parties or cause bodily injury resulting in liabilities that we may be unable to recover from insurance or other third parties or that the CPUC or the courts do not permit us to recover from ratepayers;
 - potential costs, lost revenues, or other consequences resulting from misappropriation of assets or sensitive information, corruption of data, or operational disruption due to a cyber-attack or other cyber incident;
 - increases in the cost of obtaining insurance or in uninsured losses that may not be recovered in rates, or under our contracts with the U.S. government, including increases due to difficulties in obtaining insurance for certain risks, such as wildfires and earthquakes in California;
 - restrictive covenants in our debt instruments or changes to our credit ratings on current or future debt that may increase our financing costs or affect our ability to borrow or make payments on our debt; and
 - our ability to access capital markets and other sources of credit in a timely manner on acceptable terms.
- Please consider our forward-looking statements in light of these risks as you read this Form 10-K. We qualify all of our forward-looking statements by these cautionary statements.

Item 1A. Risk Factors

You should carefully read the risks described below and other information in this Form 10-K in order to understand certain of the risks of our business.

Our business is heavily regulated and, as a result, decisions by regulatory agencies and changes in laws and regulations can significantly affect our business

GSWC's revenues depend substantially on the rates and fees it charges its customers and the ability to recover its costs on a timely basis, including the ability to recover the costs of purchased water, groundwater assessments, electricity, natural gas, chemicals, water treatment, security at water facilities and preventative maintenance and emergency repairs. Any delays by the CPUC in granting rate relief to cover increased operating and capital costs at our public utilities or delays in obtaining approval of our requests at ASUS for economic price or equitable adjustments for contracted services from the U.S. government may adversely affect our financial performance. We may file for interim rates in California in situations where there may be delays in granting final rate relief during a general rate case proceeding. If the CPUC approves lower rates, the CPUC will require us to refund to customers the difference between the interim rates and the rates approved by the CPUC. Similarly, if the CPUC approves rates that are higher than the interim rates, the CPUC may authorize us to recover the difference between the interim rates and the final rates.

Regulatory decisions affecting GSWC may also impact prospective revenues and earnings, affect the timing of the recognition of revenues and expenses, may overturn past decisions used in determining our revenues and expenses and could result in impairment charges and customer refunds. Management continually evaluates the anticipated recovery of regulatory assets, settlement of liabilities and revenues subject to refund and provides for allowances and reserves as deemed necessary. In the event that our assessment of the probability of recovery or settlement through the ratemaking process is incorrect, we will adjust the associated regulatory asset or liability to reflect the change in our assessment or any regulatory disallowances. A change in our evaluation of the probability of recovery of regulatory assets or a regulatory disallowance of all or a portion of our costs could have a material adverse effect on our financial results.

We are also, in some cases, required to estimate future expenses and, in others, we are required to incur the expense before recovering costs. As a result, our revenues and earnings may fluctuate depending on the accuracy of our estimates, the timing of our investments or expenses or other factors. If expenses increase significantly over a short period of time, we may experience delays in recovery of these expenses, the inability to recover carrying costs for these expenses and increased risks of regulatory disallowances or write-offs.

Regulatory agencies may also change their rules and policies which may adversely affect our profitability and cash flows. Changes in policies of the U.S. government may also adversely affect one or more of our Military Utility Privatization Subsidiaries. In certain circumstances, the U.S. government may be unwilling or unable to appropriate funds to pay costs mandated by changes in rules and policies of federal or state regulatory agencies. The U.S. government may disagree with the increases that we request and may delay approval of requests for equitable adjustment or economic price adjustments which could adversely affect our anticipated rates of return.

We may also be subject to fines or penalties if a regulatory agency, including the U.S. government, determines that we have failed to comply with laws, regulations or orders applicable to our businesses, unless we successfully appeal such an adverse determination. Regulatory agencies may also disallow certain costs if audit findings determine that we have failed to comply with our policies and procedures for procurement or other practices.

Our costs involved in maintaining water quality and complying with environmental regulation have increased and are expected to continue to increase

Our capital and operating costs at GSWC can increase substantially as a result of increases in environmental regulation arising from increases in the cost of upgrading and building new water treatment plants, disposing of residuals from our water treatment plants, compliance-monitoring activities and securing alternative supplies when necessary. GSWC may be able to recover these costs through the ratemaking process. We may also be able to recover these costs under settlement and contractual arrangements.

We may be subject to financial losses, penalties and other liabilities if we fail to maintain safe work sites, equipment or facilities

Our safety record is critical to our reputation. We maintain health and safety standards to protect our employees, customers, vendors and the public. Although we are vigilant in adhering to such health and safety standards, it is unlikely that we will be able to avoid accidents or other events resulting in damage to property or the public at all times.

Our business sites, including construction and maintenance sites, often put our employees and others in close proximity with large pieces of equipment, moving vehicles, pressurized water, chemicals and other regulated materials. On many sites we are responsible for safety and, accordingly, must implement safety procedures. If we fail to implement such procedures or if the procedures we implement are ineffective or are not followed by our employees or others, our employees and others may be injured or die. Unsafe work sites also have the potential to increase our operating costs. Any of the foregoing could result in financial losses, which could have a material adverse impact on our business, financial condition, and results of operations.

Our operations may involve the handling and storage of hazardous chemicals which, if improperly handled, stored or disposed of, could subject us to penalties or other liabilities. We are also subject to regulations dealing with occupational health and safety. Although we maintain functional employee groups whose primary purpose is to ensure that we implement effective health, safety, and environmental work procedures throughout our organization, including construction sites and maintenance sites, a failure to comply with such regulations could subject us to liability.

Electrical facilities also have an inherent risk of damage to persons or property should such persons or property come into contact with such facilities which could, depending upon the circumstances, subject us to penalties and damages.

We may sustain losses that exceed or are excluded from our insurance coverage or for which we are not insured

We are, from time to time, parties to legal or regulatory proceedings. These proceedings may pertain to regulatory investigations, employment matters or other disputes. Management periodically reviews its assessment of the probable outcome of these proceedings, the costs and expenses reasonably expected to be incurred, and the availability and extent of insurance coverage. On the basis of this review, management establishes reserves for such matters. We may, however, from time to time be required to pay fines, penalties or damages that exceed our insurance coverage and/or reserves if our estimate of the probable outcome of such proceedings proves to be inaccurate.

We maintain insurance coverage as part of our overall legal and risk management strategy to minimize our potential liabilities. However, our insurance policies contain exclusions and other limitations that may not cover our potential liabilities. Generally, our insurance policies cover property, workers' compensation, employer liability, general liability and automobile liability. Each policy includes deductibles or self-insured retentions and policy limits for covered claims. As a result, we may sustain losses that exceed or that are excluded from our insurance coverage or for which we are not insured.

We have experienced increased costs and difficulties in obtaining insurance coverage for wildfires that could impact or potentially arise from BVES's ordinary operations. Uninsured losses and increases in the cost of insurance may not be recoverable in customer rates. A loss which is not insured or not fully insured or cannot be recovered in customer rates could materially affect GSWC's financial condition and results of operations.

Additional Risks Associated with our Public Utility Operations

Our operating costs may increase as a result of groundwater contamination

Our operations can be impacted by groundwater contamination in certain service territories. Historically, we have taken a number of steps to address contamination, including the removal of wells from service, decreasing the amount of groundwater pumped from wells in order to facilitate remediation of plumes of contaminated water, constructing water treatment facilities and securing alternative sources of supply from other areas not affected by the contamination. In emergency situations, we have supplied our customers with bottled water until the emergency situation has been resolved.

Our ability to recover these types of costs depends upon a variety of factors, including approval of rate increases, the willingness of potentially responsible parties to settle litigation and otherwise address the contamination and the extent and magnitude of the contamination. We may recover costs from certain third parties that may be responsible, or potentially responsible, for groundwater contamination. However, we often experience delays in obtaining recovery of these costs and incur additional costs associated with seeking recovery from responsible or potentially responsible parties which may adversely impact our liquidity. In some events we may be unable to recover all of these costs from third parties due to the inability to

identify the potentially responsible parties, the lack of financial resources of responsible parties or the high litigation costs associated with obtaining recovery from responsible or potentially responsible parties.

We can give no assurance regarding the adequacy of any such recovery to offset the costs associated with contamination or the cost of recovery of any legal costs. To date, the CPUC has permitted us to establish memorandum accounts for potential recovery of these types of costs when they arise.

Management believes that rate recovery, proper insurance coverage and reserves are in place to appropriately manage these types of contamination issues. However, such issues, if ultimately resolved unfavorably to us, could, in the aggregate, have a material adverse effect on our results of operations and financial condition.

The adequacy of our water supplies depends upon weather and a variety of other uncontrollable factors

The adequacy of our water supplies varies from year to year depending upon a variety of factors, including:

- rainfall, basin replenishment, flood control, snow pack levels in California and the West, reservoir levels and availability of reservoir storage;
- availability of Colorado River water and imported water from the State Water Project;
- the amount of usable water stored in reservoirs and groundwater basins;
- the amount of water used by our customers and others;
- water quality;
- legal limitations on production, diversion, storage, conveyance and use; and
- climate change.

More frequent and extended California drought conditions and changes in weather patterns and population growth in California cause increased stress on surface water supplies and groundwater basins. In addition, low or no allocations of water from the State Water Project and court-ordered pumping restrictions on water obtained from the Sacramento-San Joaquin Delta decrease or eliminate the amount of water that the Metropolitan Water District of Southern California ("MWD") and other state water contractors are able to import from northern California.

We have implemented tiered rates and other practices, as appropriate, in order to encourage water conservation. We have also implemented programs to assist customers in complying with water usage reductions. Over the long term, we are acting to secure additional supplies from desalination and increase use of reclaimed water, where appropriate and feasible. We cannot predict the extent to which these efforts to reduce stress on our water supplies will be successful or sustainable, or the extent to which these efforts will enable us to continue to satisfy all of the water needs of our customers.

Water shortages at GSWC may:

- adversely affect our supply mix, for instance, by causing increased reliance upon more expensive water sources;
- adversely affect our operating costs, for instance, by increasing the cost of producing water from more highly contaminated aquifers or requiring us to transport water over longer distances, truck water to water systems or adopt other emergency measures to enable us to continue to provide water service to our customers;
- result in an increase in our capital expenditures over the long term, for example, by requiring future construction of pipelines to connect to alternative sources of supply, new wells to replace those that are no longer in service or are otherwise inadequate to meet the needs of our customers, and other facilities to conserve or reclaim water;
- adversely affect the volume of water sold as a result of such factors as mandatory or voluntary conservation efforts by customers, changes in customer conservation patterns, recycling of water by customers and imposition of new regulations impacting such things as landscaping and irrigation patterns;
- adversely affect aesthetic water quality if we are unable to flush our water systems as frequently due to water shortages or drought restrictions; and
- result in customer dissatisfaction and harm to our reputation if water service is reduced, interrupted or otherwise adversely affected as a result of drought, water contamination or other causes.

Our liquidity may be adversely affected by changes in water supply costs

We obtain our water supplies for GSWC from a variety of sources, which vary among our water systems. Certain systems obtain all of their supply from water that is pumped from aquifers within our service areas; some systems purchase all of the supply from wholesale suppliers; some systems obtain the supply from treating surface water sources; and other systems obtain the supply from a combination of wells, surface water sources and/or wholesale suppliers. The cost of obtaining these supplies varies, and overall costs can be impacted as use within a system varies from time to time. As a result, our cost of providing, distributing and treating water for our customers' use can vary significantly.

Furthermore, imported water wholesalers, such as MWD, may not always have an adequate supply of water to sell to us. Wholesale water suppliers may increase their prices for water delivered to us based on factors that affect their operating costs. Purchased water rate increases are beyond our control.

GSWC has implemented a modified supply cost balancing account ("MCBA") to track and recover costs from supply mix changes and rate changes by wholesale suppliers, as authorized by the CPUC. However, cash flows from operations can be significantly affected since much of the balance we recognize in the MCBA is collected from or refunded to customers primarily through surcharges or surcredits, respectively, generally over twelve- to eighteen-month periods.

Our liquidity and earnings may be adversely affected by maintenance costs

Some of our infrastructure in California is aging. We have experienced leaks and mechanical problems in some of these older systems. In addition, well and pump maintenance expenses are affected by labor and material costs and more stringent environmental regulations. These costs can increase substantially and unexpectedly.

We include estimated increases in maintenance costs for future years in each general rate case filed by GSWC for possible recovery.

Our liquidity and earnings may be adversely affected by our conservation efforts

Our water utility business is heavily dependent upon revenue generated from rates charged to our customers based on the volume of water used. The rates we charge for water are regulated by the CPUC and may not be adequately adjusted to reflect changes in demand. Declining usage also negatively impacts our long-term operating revenues if we are unable to secure rate increases or if growth in the customer base does not occur to the extent necessary to offset per-customer usage decline.

Conservation by all customer classes at GSWC is a top priority. However, customer conservation will result in lower volumes of water sold. We may experience a decline in per-customer water usage due to factors such as:

- conservation efforts to reduce costs;
- drought conditions resulting in additional water conservation;
- the use of more efficient household fixtures and appliances by consumers to save water;
- voluntary or mandatory changes in landscaping and irrigation patterns;
- recycling of water by our customers; and
- regulation of groundwater rights.

These types of changes may result in permanent decreases in demand even if our water supplies are sufficient to meet higher levels of demand after a drought ends. In addition, governmental restrictions on water usage during drought conditions may result in a decreased demand for water, even if our sources of supply are sufficient to serve our customers during such drought conditions.

We implemented a CPUC-approved water-revenue adjustment mechanism ("WRAM") at GSWC, which has the effect of reducing the adverse impact of our customers' conservation efforts on revenues. However, cash flows from operations can be significantly affected since much of the balance we recognize in the WRAM account is collected from or refunded to customers generally over twelve-, eighteen- or thirty-six-month periods.

Our earnings may be affected by weather during different seasons

The demand for water and electricity varies by season. For instance, there can be a higher level of water consumption during the third quarter of each year when weather in California tends to be hot and dry. During unusually wet weather, our customers generally use less water. The CPUC-approved WRAM helps mitigate fluctuations in revenues due to changes in water consumption by our customers in California.

The demand for electricity in our electric customer service area is greatly affected by winter snow levels. An increase in winter snow levels reduces the use of snowmaking machines at ski resorts in the Big Bear area and, as a result, reduces our electric revenues. Likewise, unseasonably warm weather during a skiing season may result in temperatures too high for snowmaking conditions, which also reduces our electric revenues. GSWC has implemented a CPUC-approved base-revenue-requirement adjustment mechanism for our electric business which helps mitigate fluctuations in the revenues of our electric business due to changes in the amount of electricity used by GSWC's electric customers.

Our liquidity and earnings may be adversely affected by wildfires

It is possible that wildfires in our electric service territory may occur more frequently, be of longer duration or impact larger areas as a result of drought damaged plants and trees, lower humidity or higher winds that might be occurring as result of changed weather patterns. Our liquidity, earnings and operations may be materially adversely affected by wildfires in our electric service territory. We may be required to (i) incur greater costs to relocate lines or increase our trimming of trees and other plants near our electric facilities, and (ii) bear the costs of damages to property or injuries to the public if it is determined that our power lines or other electrical equipment was a cause, in whole or in part, of such damages or injuries.

Losses by insurance companies resulting from wildfires in California may cause insurance coverage for wildfire risks to become more expensive or unavailable, under reasonable terms, and our insurance may, in any event, be inadequate to recover all our losses incurred in a wildfire. We might not be allowed to recover in our rates any increased costs of wildfire insurance, or the costs of any uninsured wildfire losses.

Our liquidity may be adversely affected by increases in electricity and natural gas prices in California

We purchase most of the electric energy sold to customers in our electric customer service area from others under purchased power contracts. In addition to purchased power contracts, we purchase additional energy from the spot market to meet peak demand and following the expiration of purchased power contracts if there are delays in obtaining CPUC authorization of new purchase power contracts. We may sell surplus power to the spot market during times of reduced energy demand. As a result, our cash flows may be affected by increases in spot market prices of electricity purchased and decreases in spot market prices for electricity sold. However, GSWC has implemented supply-cost balancing accounts, as approved by the CPUC, to mitigate fluctuations in supply costs. We also operate a natural-gas-fueled 8.4 megawatt generator in our electric service area.

Unexpected generator downtime or a failure to perform by any of the counterparties to our electric and natural gas purchase contracts could further increase our exposure to fluctuating natural gas and electricity prices.

Changes in electricity prices also affect the unrealized gains and losses on our block forward purchased power contracts that qualify as derivative instruments since we adjust the asset or liability on these contracts to reflect the fair market value of the contracts at the end of each month. The CPUC has authorized us to establish a memorandum account to track the changes in the fair market value of our purchased power contracts. As a result, unrealized gains and losses on these types of purchased power contracts do not impact earnings.

We may not be able to procure sufficient renewable energy resources to comply with CPUC rules

We are required to procure a portion of our electricity for BVES from renewable energy resources to meet the CPUC's renewable procurement requirements. We have an agreement with a third party to purchase renewable energy credits which we believe enables us to meet these requirements through 2023. In the event that the third party fails to perform in accordance with the terms of the agreement, we may not be able to obtain sufficient resources to meet the renewable procurement requirements. We may be subject to fines and penalties by the CPUC if it determines that we are not in compliance with the renewable resource procurement rules.

Our assets are subject to condemnation

Municipalities and other governmental subdivisions may, in certain circumstances, seek to acquire certain of our assets through eminent domain proceedings. It is generally our practice to contest these proceedings, which may be costly and may temporarily divert the attention of management from the operation of our business. If a municipality or other governmental subdivision succeeds in acquiring our assets, there is a risk that we will not receive adequate compensation for the assets taken or be able to recover all charges associated with the condemnation of such assets. In addition, we would no longer be entitled to any portion of revenue generated from the use of such assets.

Our costs of obtaining and complying with the terms of franchise agreements are increasing

Cities and counties in which GSWC operates have granted GSWC franchises to construct, maintain and use pipes and appurtenances in public streets and rights of way. The costs of obtaining, renewing and complying with the terms of these franchise agreements have been increasing as cities and counties attempt to regulate GSWC's operations within the boundaries of the city or unincorporated areas of the counties in which GSWC operates. Cities and counties have also been attempting to impose new fees on GSWC's operations, including pipeline abandonment fees and road-cut or other types of capital improvement fees. At the same time, there is increasing opposition from consumer groups to rate increases that may be necessary to compensate GSWC for the increased costs of regulation by local governments. These trends may adversely affect GSWC's ability to recover its costs of providing water service in rates and to efficiently manage capital expenditures and operating and maintenance expenses within CPUC authorized levels.

The generation, transmission and distribution of electricity are dangerous and involve inherent risks of damage to private property and injury to employees and the general public

Electricity is dangerous for employees and the general public should they come in contact with electrical current or equipment, including through downed power lines, sparking during high wind events or equipment malfunctions. Injuries and property damage caused by such events may subject GSWC to significant liabilities that may not be covered or fully covered by insurance. Additionally, the CPUC has delegated to its staff the authority to issue citations, which carry a fine of \$50,000 per-violation per day, to electric utilities subject to its jurisdiction for violations of safety rules found in statutes, regulations, and the General Orders of the CPUC which could also materially affect GSWC's liquidity and results of operations.

Additional Risks Associated with our Contracted Services Operations

We derive revenues from contract operations primarily from the operation and maintenance of water and/or wastewater systems at military bases and the construction of water and wastewater infrastructure on these bases (including renewal and replacement of these systems). As a result, these operations are subject to risks that are different from those of our public utility operations.

Our 50-year contracts for servicing military bases create certain risks that are different from our public utility operations

We have entered into contracts to provide water and/or wastewater services at military bases pursuant to 50-year contracts, subject to termination, in whole or in part, for the convenience of the U.S. government. In addition, the U.S. government may stop work under the terms of one or more of the contracts, delay performance of our obligations under the contracts or modify the contracts at its convenience.

Our contract pricing is based on a number of assumptions, including assumptions about prices and availability of labor, equipment and materials. We may be unable to recover all costs if any of these assumptions are inaccurate or if all costs incurred in connection with performing the work were not considered. Our contracts are also subject to annual economic price adjustments or other changes permitted by the terms of the contracts. Prices are also subject to equitable adjustment based upon changes in circumstances, laws or regulations and service-requirement changes to the extent provided in each of the contracts.

We are required to record all costs under these types of contracts as they are incurred. As a result, we may record losses associated with unanticipated conditions, higher than anticipated infrastructure levels and emergency work at the time such expenses occur. We recognize additional revenue for such work as, and to the extent that, our economic price adjustments and/or requests for equitable adjustments are approved. Delays in obtaining approval of economic price adjustments and/or equitable adjustments can negatively impact our results of operations and cash flows.

Certain payments under these contracts are subject to appropriations by Congress. We may experience delays in receiving payment or delays in price adjustments due to canceled or delayed appropriations specific to our projects or

reductions in government spending for the military generally or military-base operations specifically. Appropriations and the timing of payment may be influenced by, among other things, the state of the economy, competing political priorities, budget constraints, the timing and amount of tax receipts and the overall level of government expenditures.

Management also reviews goodwill for impairment at least annually. ASUS has \$1.1 million of goodwill which may be at risk for potential impairment if requested economic price adjustments and/or equitable adjustments are not granted.

Risks associated with wastewater systems are different from those of our water distribution operations

The wastewater-collection-system operations of our subsidiaries providing wastewater services on military bases are subject to substantial regulation and involve significant environmental risks. If collection, treatment or disposal systems fail, overflow or do not operate properly, untreated wastewater or other contaminants could spill onto nearby properties or into nearby streams and rivers, causing damage to persons or property, injury to aquatic life and economic damages. The cost of addressing such damages may not be recoverable. This risk is most acute during periods of substantial rainfall or flooding, which are common causes of sewer overflows and system failures. Liabilities resulting from such damage could adversely and materially affect our business, results of operations and financial condition. In the event that we are deemed liable for any damage caused by overflows, our losses may not be recoverable under our contracts with the U.S. government or covered by insurance policies. We may also find it difficult to secure insurance for this business in the future at acceptable rates.

We may have responsibility for water quality at the military bases we serve

While it is the responsibility of the U.S. government to provide the source of water supply to meet the Military Utility Privatization Subsidiaries' water distribution system requirements under their contracts, the Military Utility Privatization Subsidiaries, as the water system permit holders for most of the bases they serve, are responsible for ensuring the continued compliance of the provided source of supply with all federal, state and local regulations. We believe, however, that the terms of the contracts between the Military Utility Privatization Subsidiaries and the U.S. government provide the opportunity for us to recover costs incurred in the treatment or remediation of any quality issue that arises from the source of water supply.

Our contracts for the construction of infrastructure improvements on military bases create risks that are different from those of our operations and maintenance activities

We have entered into contract modifications with the U.S. government and agreements with third parties for the construction of new water and/or wastewater infrastructure at the military bases on which we operate. Most of these contracts are firm fixed-price contracts. Under firm fixed-price contracts, we will benefit from cost savings, but are generally unable (except for changes in scope or circumstances approved by the U.S. government or third party) to recover any cost overruns to the approved contract price. Under most circumstances, the U.S. government or third party has approved increased-cost change orders due to changes in scope of work performed.

We generally recognize contract revenues from these types of contracts over time using input methods to measure progress towards satisfying a performance obligation. The measurement of performance over time is based on cost incurred relative to total estimated costs, or the physical completion of the construction projects. The earnings or losses recognized on individual contracts are based on periodic estimates of contract revenues, costs and profitability as these construction projects progress.

We establish prices for these types of firm fixed-price contracts and the overall 50-year contracts taken as a whole, based, in part, on cost estimates that are subject to a number of assumptions, including assumptions regarding future economic conditions. If these estimates prove inaccurate or circumstances change, cost overruns could have a material adverse effect on our contracted business operations and results of operations.

We may be adversely affected by disputes with the U.S. government regarding our performance of contracted services on military bases

We are periodically audited or reviewed by the Defense Contract Auditing Agency ("DCAA") and/or the Defense Contract Management Agency ("DCMA") for compliance with federal acquisition regulations, cost-accounting standards and other laws, regulations and standards that are not applicable to the operations of GSWC. During the course of these audits/reviews, the DCAA or DCMA may question our incurred project costs or the manner in which we have accounted for such costs and recommend to our U.S. government administrative contracting officer that such costs be disallowed.

If there is a dispute with the U.S. government regarding performance under these contracts or the amounts owed to us, the U.S. government may delay, reject or withhold payment, delay price adjustments or assert its right to offset damages

against amounts owed to us. If we are unable to collect amounts owed to us on a timely basis or the U.S. government asserts its offset rights, profits and cash flows could be adversely affected.

If we fail to comply with the terms of one or more of our U.S. government contracts, other agreements with the U.S. government or U.S. government statutes and regulations, we could also be suspended or barred from future U.S. government contracts for a period of time and be subject to possible damages, fines and penalties as well as damage to our reputation in the water and wastewater industry.

We depend, to some extent, upon subcontractors to assist us in the performance of contracted services on military bases

We rely, to some extent, on subcontractors to assist us in the operation and maintenance of the water and wastewater systems at military bases. The failure of any of these subcontractors to perform services for us in accordance with the terms of our contracts with the U.S. government could result in the termination of our contract to provide water and/or wastewater services at the affected base(s), a loss of revenues or increases in costs to correct a subcontractor's performance failures.

We are also required to make a good faith effort to achieve our small business subcontracting plan goals pursuant to U.S. government regulations. If we fail to use good faith efforts to meet these goals, the U.S. government may assess damages against us at the end of the contract. The U.S. government has the right to offset claimed damages against any amounts owed to us.

We also rely on third-party manufacturers, as well as third-party subcontractors, to complete our construction projects. To the extent that we cannot engage subcontractors or acquire equipment or materials, our ability to complete a project in a timely fashion or at a profit may be impaired. If the amount of costs we incur for these projects exceeds the amount we have estimated in our bid, we could experience reduced profits or losses in the performance of these contracts. In addition, if a subcontractor or manufacturer is unable to deliver its services, equipment or materials according to the negotiated terms for any reason, including the deterioration of its financial condition, we may be required to purchase the services, equipment or materials from another source at a higher price. This may reduce the profit to be realized or result in a loss on a project for which the services, equipment or materials were needed.

If these subcontractors fail to perform services to be provided to us or fail to provide us with the proper equipment or materials, we may be penalized for their failure to perform; however, our contracts with these subcontractors include certain protective provisions, which may include the assessment of liquidated damages. We also mitigate these risks by requiring our subcontractors, as appropriate, to obtain performance bonds and to compensate us for any penalties we may be required to pay as a result of their failure to perform.

Our earnings may be affected, to some extent, by weather during different seasons

Seasonal weather conditions, such as hurricanes, heavy rainfall or significant winter storms, occasionally cause temporary office closures and/or result in temporary halts to construction activity at military bases. To the extent that our construction activities are impeded by these events, we will experience a delay in recognizing revenues from these construction projects.

We continue to incur costs associated with the expansion of our contract activities

We continue to incur additional costs in connection with the expansion of our contract operations associated with the preparation of bids for new contract operations on prospective and existing military bases. Our ability to recover these costs and to earn a profit on our contract operations will depend upon the extent to which we are successful in obtaining new contracts and recovering these costs and other costs from new contract revenues.

We face competition for new military privatization contracts

An important part of our growth strategy is the expansion of our contracted services business through new contract awards to serve additional military bases for the U.S. government. ASUS competes with other regulated utilities, municipalities, and other entities for these contracts.

Other Risks***The accuracy of our judgments and estimates about financial and accounting matters will impact our operating results and financial condition***

The quality and accuracy of estimates and judgments used have an impact on our operating results and financial condition. If our estimates are not accurate, we will be required to make an adjustment in a future period. We make certain estimates and judgments in preparing our financial statements regarding, among others:

- timing of recovering WRAM and MCBA regulatory assets;
- amounts to set aside for uncollectible accounts receivable, inventory obsolescence and uninsured losses;
- our legal exposure and the appropriate accrual for claims, including general liability and workers' compensation claims;
- future costs and assumptions for pensions and other post-retirement benefits;
- regulatory recovery of deferred items; and
- possible tax uncertainties.

Our business requires significant capital expenditures

The utility business is capital intensive. We spend significant sums of money for additions to, or replacement of, our property, plant and equipment at our water and electric utilities. We obtain funds for these capital projects from operations, contributions by developers and others and advances from developers (which are repaid over a period of time at no interest). We also periodically borrow money or issue equity for these purposes. In addition, we have a syndicated bank credit facility that is partially used for these purposes. We cannot provide assurance that these sources will continue to be adequate or that the cost of funds will remain at levels permitting us to earn a reasonable rate of return.

Our Military Utility Privatization Subsidiaries providing water and wastewater services on military bases also expect to incur significant capital expenditures. To the extent that the U.S. government does not reimburse us for these expenditures as the work is performed or completed, the U.S. government will repay us over time.

We may be adversely impacted by economic conditions

Access to external financing on reasonable terms depends, in part, on conditions in the debt and equity markets. When business and market conditions deteriorate, we may no longer have access to the capital markets on reasonable terms. Our ability to obtain funds is dependent upon our ability to access the capital markets by issuing debt or equity to third parties or obtaining funds from our revolving credit facility. In the event of financial turmoil affecting the banking system and financial markets, consolidation of the financial services industry, significant financial service institution failures or our inability to renew or replace our existing revolving credit facility on favorable terms, it may become necessary for us to seek funds from other sources on less favorable terms.

Market conditions and demographic changes may adversely impact the value of our benefit plan assets and liabilities

Market factors can affect assumptions we use in determining funding requirements with respect to our pension and other postretirement benefit plans. For example, a relatively modest change in our assumptions regarding discount rates can materially affect our calculation of funding requirements. To the extent that market data compels us to reduce the discount rate used in our assumptions, our benefit obligations could materially increase, which could adversely affect our financial position and cash flows. Further, changes in demographics, such as increases in life expectancy assumptions may also increase the funding requirements of our obligations related to the pension and other postretirement benefit plans.

Market conditions also affect the values of the assets that are held in trusts to satisfy significant future obligations under our pension and other postretirement benefit plans. These assets are subject to market fluctuations, which may cause investment returns to fall below our projected rates of return. A decline in the market value of our pension and other postretirement benefit plan assets will increase the funding requirements under these plans if future returns on these assets are insufficient to offset the decline in value. Future increases in pension and other postretirement costs as a result of the reduced value of plan assets may not be fully recoverable in rates, and our results of operations and financial position could be negatively affected. These risks are mitigated to some extent by the two-way pension balancing accounts authorized by the CPUC, which permits us to track differences between forecasted annual pension expense adopted in water and electric rates and actual pension expenses for future recovery or refund to customers.

Payment of our debt may be accelerated if we fail to comply with restrictive covenants in our debt agreements

Our failure to comply with restrictive covenants in our debt agreements could result in an event of default. If the default is not cured or waived, we may be required to repay or refinance this debt before it becomes due. Even if we are able to obtain waivers from our creditors, we may only be able to do so on unfavorable terms.

The price of our Common Shares may be volatile and may be affected by market conditions beyond our control

The trading price of our Common Shares may fluctuate in the future because of the volatility of the stock market and a variety of other factors, many of which are beyond our control. Factors that could cause fluctuations in the trading price of our Common Shares include: regulatory developments; general economic conditions and trends; price and volume fluctuations in the overall stock market from time to time; actual or anticipated changes or fluctuations in our results of operations; actual or anticipated changes in the expectations of investors or securities analysts; actual or anticipated developments in other utilities' businesses or the competitive landscape generally; litigation involving us or our industry; major catastrophic events, or sales of large blocks of our stock.

AWR is a holding company that depends on cash flow from its subsidiaries to meet its financial obligations and to pay dividends on its Common Shares

As a holding company, our subsidiaries conduct substantially all operations and our only significant assets are investments in our subsidiaries. This means that we are dependent on distributions of funds from our subsidiaries to meet our debt service obligations and to pay dividends on our Common Shares.

Our subsidiaries are separate and distinct legal entities and generally have no obligation to pay any amounts due on our credit facility. Our subsidiaries only pay dividends if and when declared by the respective subsidiary board. Moreover, GSWC is obligated to give first priority to its own capital requirements and to maintain a capital structure consistent with that determined to be reasonable by the CPUC in its most recent decision on capital structure in order that customers not be adversely affected by the holding company structure. Furthermore, our right to receive cash or other assets in the unlikely event of liquidation or reorganization of any of our subsidiaries is generally subject to the prior claims of creditors of that subsidiary. If we are unable to obtain funds from a subsidiary in a timely manner, we may be unable to meet our financial obligations, make additional investments or pay dividends.

Failure to attract, retain, train, motivate, develop and transition key employees could adversely affect our business

In order to be successful, we must attract, retain, train, motivate, and develop key employees, including those in managerial, operational, financial, business-development and information-technology support positions. Our regulated business and contracted services operations are complex. Attracting and retaining high quality staff allows us to minimize the cost of providing quality service. In order to attract and retain key employees in a competitive marketplace, we must provide a competitive compensation package and be able to effectively recruit qualified candidates. The failure to successfully hire key employees or the loss of a material number of key employees could have a significant impact on the quality of our operations in the short term. Further, changes in our management team may be disruptive to our business, and any failure to successfully transition key new hires or promoted employees could adversely affect our business and results of operations.

We must successfully maintain and/or upgrade our information technology systems as we are increasingly dependent on the continuous and reliable operation of these systems

We rely on various information technology systems to manage our operations. Such systems require periodic modifications, upgrades and/or replacement, which subject us to inherent costs and risks including potential disruption of our internal control structure, substantial capital expenditures, additional administrative and operating expenses, retention of sufficiently skilled personnel to implement and operate the new systems, and other risks and costs of delays or difficulties in transitioning to new systems or of integrating new systems into our current systems. In addition, the difficulties with implementing new technology systems may cause disruptions in our business operations and have an adverse effect on our business and operations, if not anticipated and appropriately mitigated.

We rely on our computer, information and communications technology systems in connection with the operation of our business, especially with respect to customer service and billing, accounting and the monitoring and operation of our treatment, storage and pumping facilities. Our computer and communications systems and operations could be damaged or interrupted by weather, natural disasters, telecommunications failures or acts of war or terrorism or similar events or

disruptions. Any of these or other events could cause system interruption, delays and loss of critical data, or delay or prevent operations and adversely affect our financial results.

Security risks, data protection breaches and cyber-attacks could disrupt our internal operations, and any such disruption could increase our expenses, damage our reputation and adversely affect our stock price

There have been an increasing number of cyber-attacks on companies around the world, which have caused operational failures or compromised sensitive corporate or customer data. These attacks have occurred over the internet, through malware, viruses or attachments to e-mails or through persons inside the organization or with access to systems inside the organization. Although we do not believe that our systems are at a materially greater risk of cyber security attacks than other similar organizations, our information technology systems remain vulnerable to damage or interruption from:

- computer viruses;
- malware;
- hacking; and
- denial of service actions.

We have implemented security measures and will continue to devote significant resources to address any security vulnerabilities in an effort to prevent cyber-attacks. Despite our efforts, we cannot be assured that a cyber-attack will not cause water, wastewater or electric system problems, disrupt service to our customers, compromise important data or systems or result in unintended release of customer or employee information. Moreover, if a computer security breach affects our systems or results in the unauthorized release of sensitive data, our reputation could be materially damaged. We could also be exposed to a risk of loss or litigation and possible liability. In addition, pursuant to U.S. government regulations regarding cyber-security of government contractors, we might be subject to fines, penalties or other actions, including debarment, with respect to current contracts or with respect to future contract opportunities.

Our operations are geographically concentrated in California

Although we operate water and wastewater facilities in a number of states, our water and electric operations are concentrated in California, particularly Southern California. As a result, our financial results are largely subject to political, water supply, labor, utility cost and regulatory risks, economic conditions, natural disasters and other risks affecting California.

We operate in areas subject to natural disasters

We operate in areas that are prone to earthquakes, fires, mudslides, hurricanes, tornadoes, flooding or other natural disasters. While we maintain insurance policies to help reduce our financial exposure, a significant seismic event in Southern California, where GSWC's operations are concentrated, or other natural disasters in any of the areas that we serve could adversely impact our ability to deliver water and electricity or provide wastewater service and adversely affect our costs of operations. With respect to GSWC, the CPUC has historically allowed utilities to establish a catastrophic event memorandum account to potentially recover such costs. With respect to the Military Utility Privatization Subsidiaries, costs associated with response to natural disasters have been recoverable through requests for equitable adjustment.

Our operations may be the target of terrorist activities

Terrorists could seek to disrupt service to our customers by targeting our assets. We have invested in additional security for facilities throughout our regulated service areas to mitigate the risks of terrorist activities. We also may be prevented from providing water and/or wastewater services at the military bases we serve in times of military crisis affecting these bases.

The final determination of our income tax liability may be materially different from our income tax provision

Significant judgment is required in determining our provision for income taxes. Our calculation of the provision for income taxes is subject to our interpretation of applicable tax laws in the jurisdictions in which we file. In addition, our income tax returns are subject to periodic examination by the Internal Revenue Service and other taxing authorities.

On December 22, 2017, the Tax Cuts and Jobs Act (the "Tax Act") was signed into federal law. The provisions of this major tax reform are generally effective January 1, 2018. The most significant change impacting Registrant is the reduction of the corporate federal income tax rate from 35% to 21% effective January 1, 2018. Registrant was able to make reasonable estimates in order to remeasure its deferred tax balances and account for the effects of the Tax Act, which have been reflected in

the December 31, 2017 financial statements. Any further technical corrections or other forms of guidance addressing the Tax Act, as well as regulatory or governmental actions, could result in adjustments to Registrant's remeasurement and accounting for the effects of the Tax Act.

In December 2014, the Company also changed its tax method of accounting to permit the expensing of qualifying utility asset improvement costs that were previously being capitalized and depreciated for tax purposes. As a result of the change, which included a cumulative adjustment for 2013 and prior years, the Company deducted a significant amount of asset costs that consisted primarily of water mains and connections. Our determination of costs that qualify as a capital asset versus an immediate tax deduction for utility asset improvements is subject to subsequent adjustment arising from review by taxing authorities, and may impact the deductions that have been taken on recently filed income tax returns. Although we believe our income tax estimates are appropriate, there is no assurance that the final determination of our current taxes payable will not be materially different, either higher or lower, from the amounts reflected in our financial statements. In the event we are assessed additional income taxes, our financial condition and cash flows could be adversely affected.

Item 1B. Unresolved Staff Comments

None.

Item 2. Properties

Water Properties

As of December 31, 2017, GSWC's physical properties consisted of water transmission and distribution systems which included 2,783 miles of pipeline together with services, meters and fire hydrants and approximately 425 parcels of land, generally less than one acre each, on which are located wells, pumping plants, reservoirs and other water utility facilities, including four surface water treatment plants. GSWC also has franchises, easements and other rights of way for the purpose of accessing wells and tanks and constructing and using pipes and appurtenances for transmitting and distributing water. All of GSWC's properties are located in California.

As of December 31, 2017, GSWC owned 241 wells, of which 200 are active with an aggregate production capacity of approximately 212 million gallons per day. GSWC has 62 connections to the water distribution facilities of the MWD and other municipal water agencies. GSWC's storage reservoirs and tanks have an aggregate capacity of approximately 113.8 million gallons. GSWC owns no dams. The following table provides information regarding the water utility plant of GSWC:

| Pumps | | Distribution Facilities | | | Reservoirs | |
|-------|---------|-------------------------|----------|----------|------------|-----------|
| Well | Booster | Mains* | Services | Hydrants | Tanks | Capacity* |
| 241 | 392 | 2,783 | 259,018 | 26,041 | 142 | 113.8 (1) |

* Reservoir capacity is measured in millions of gallons. Mains are in miles.

- (1) GSWC has additional capacity in its Bay Point system through an exclusive capacity right to use 4.4 million gallons per day from a treatment plant owned by the Contra Costa Water District. GSWC also has additional reservoir capacity through an exclusive right to use an eight-million-gallon reservoir, one-half of another eight-million-gallon reservoir, and one-half of a treatment plant's capacity, all owned by the Three Valleys Municipal Water District, to serve the cities of Claremont and San Dimas.

Electric Properties

GSWC's electric properties are located in the Big Bear area of San Bernardino County, California. As of December 31, 2017, GSWC owned and operated approximately 87.8 miles of overhead 34.5 kilovolt (kv) transmission lines, 2.8 miles of underground 34.5 kv transmission lines, 489.2 miles of 4.16 kv or 2.4 kv distribution lines, 96.6 miles of underground cable, 13 sub-stations and a natural gas-fueled 8.4 MW peaking generation facility. GSWC also has franchises, easements and other rights of way for the purpose of constructing and using poles, wires and other appurtenances for transmitting electricity.

Adjudicated and Other Water Rights

GSWC owns groundwater and surface water rights in California. Groundwater rights are further subject to classification as either adjudicated or unadjudicated rights. Adjudicated rights have been subjected to comprehensive litigation in the courts, are typically quantified and are actively managed for optimization and sustainability of the resource. Unadjudicated rights are subject to further regulation by the State Water Resources Control Board ("SWRCB") and the California Department of Water Resources. Surface water rights are quantified and managed by the SWRCB, unless the surface water rights originated prior to 1914. As of December 31, 2017, GSWC had adjudicated groundwater rights and surface water rights of 73,611 and 11,335 acre-feet per year, respectively. GSWC also has a number of unadjudicated groundwater rights, which have not been quantified, but are typically measured by historical usage.

Office Buildings

GSWC owns its general headquarters facility in San Dimas, California. GSWC also owns and leases certain facilities throughout California that house district and customer service offices. ASUS leases office facilities in Georgia, Virginia and North Carolina. ECUS and FRUS rent temporary service center facilities in Florida and Kansas, respectively, pending the completion of facilities to be constructed at those locations. FBWS has a renewable, no-cost license for use of space in a U.S. government building at Fort Bliss pending construction of an owned service center. TUS, PSUS, ODUS and ONUS own service centers in Maryland, South Carolina, Virginia and North Carolina, respectively.

Mortgage and Other Liens

As of December 31, 2017, neither AWR, GSWC, nor ASUS, or any of its subsidiaries, had any mortgage debt or liens securing indebtedness outstanding.

Under the terms of certain debt instruments, AWR and GSWC are prohibited from issuing any secured debt, without providing equal and ratable security to the holders of this existing debt.

Condemnation of Properties

The laws of the state of California provide for the acquisition of public utility property by governmental agencies through their power of eminent domain, also known as condemnation, where doing so constitutes a more necessary use. In addition, these laws provide that the owner of utility property (i) may contest whether the condemnation is actually necessary, and (ii) is entitled to receive the fair market value of its property if the property is ultimately taken.

Environmental Clean-Up and Remediation of Properties

GSWC has been involved in environmental remediation and clean-up at a plant site ("Chadron Plant") that contained an underground storage tank which was used to store gasoline for its vehicles. This tank was removed from the ground in July 1990 along with the dispenser and ancillary piping. Since then, GSWC has been involved in various remediation activities at this site.

GSWC has accrued an estimated liability which includes costs for two years of continued activities of cleanup and monitoring, and site-closure-related activities. The ultimate cost may vary as there are many unknowns in remediation of underground gasoline spills and this is an estimate based on currently available information. Management believes it is probable that the estimated additional costs will be approved for inclusion in rate base by the CPUC.

Item 3. Legal Proceedings

On December 9, 2014, the City of Claremont, California ("Claremont") filed an eminent domain lawsuit in the County of Los Angeles Superior Court against GSWC (*City of Claremont v. Golden State Water Company, Case No. BC 566125*) to acquire GSWC's Claremont system which serves the City of Claremont and parts of surrounding communities. In December 2016, the County of Los Angeles Superior Court (the "Court") issued a decision rejecting Claremont's attempt to take over GSWC's Claremont water system. In February 2017, the Court further ordered that GSWC be entitled to recover \$7.6 million ("Judgment Amount") of its litigation expenses and related defense costs from Claremont. During the first quarter of 2017, Claremont appealed both decisions.

In October 2017, GSWC and Claremont entered into a settlement agreement whereby Claremont agreed to drop its appeals and in December 2017 paid \$2.0 million to GSWC as partial satisfaction of the Judgment Amount and interest accrued through the end of 2017. Furthermore, quarterly interest-only payments calculated on the unpaid Judgment Amount of \$5.9 million are to be made by Claremont to GSWC over the next 12 years. If Claremont (i) makes all of the quarterly payments as required, and (ii) does not take formal action to condemn GSWC's Claremont water system before December 31, 2029, then on January 1, 2030, the unpaid Judgment Amount will be deemed satisfied by Claremont without further payment required to be made to GSWC. However, if Claremont were to take formal action within the next 12 years or miss any of the required payments specified in the settlement agreement, the unpaid Judgment Amount and any unpaid accrued interest would immediately become due and payable. At this time, GSWC is unable to predict the actions that Claremont will take over the next 12 years. GSWC serves approximately 11,000 customers in Claremont.

On May 12, 2016, Casitas Municipal Water District filed an eminent domain lawsuit in Ventura County Superior Court against GSWC (*Casitas Municipal Water District v. Golden State Water Company, Case No. 56-2016-00481628-CU-EI-VTA*) to acquire the property and assets of GSWC located in its Ojai service area. On April 12, 2017, the Board of Directors of Casitas Municipal Water District ("Casitas") approved a settlement agreement with GSWC, and a group of citizens referred to as Ojai Friends of Locally Owned Water ("Ojai FLOW"), to resolve the eminent domain action and other litigation brought by Casitas and Ojai FLOW against GSWC. In accordance with the terms of the settlement agreement, on June 8, 2017 Casitas acquired the operating assets of GSWC's 2,900-connection Ojai water system by eminent domain for \$34.3 million in cash, including payments for customer receivables and regulatory assets, and Casitas and Ojai FLOW dismissed all claims against GSWC. As a result of this transaction, GSWC recorded a pretax gain of \$8.3 million on the sale of the Ojai water system during the second quarter of 2017.

On November 13, 2015, the owners of a commercial building filed suit in Ventura County Superior Court against GSWC (*Khaled A. Al-Awar et al v. Golden State Water Company, Case No. 56-2015-00474589-CU-PO-VTA*) for damages to their building caused by a water main break that occurred in 2014. Repairs to the building had been delayed for a variety of reasons, including a dispute and litigation between two of GSWC's insurance carriers regarding their respective coverage obligations. In September 2017, the Ventura County Superior Court issued a statement of decision in favor of the plaintiffs, and awarded damages to the plaintiffs in the amount of \$2.6 million. Subsequently, the Court also awarded the plaintiffs' attorney fees and other costs. In December 2017, GSWC entered into settlement agreements with its insurance carriers, as well as with the owners of the commercial building, resolving all disputes. The final resolution of this matter resulted in GSWC recording an immaterial charge to expense during the fourth quarter of 2017.

Registrant is subject to ordinary routine litigation incidental to its business, some of which may include claims for compensatory and punitive damages. Management believes that rate recovery, proper insurance coverage and reserves are in place to insure against, among other things, property, general liability, employment, and workers' compensation claims incurred in the ordinary course of business. Insurance coverage may not cover certain claims involving punitive damages.

Item 4. Mine Safety Disclosure

Not applicable.

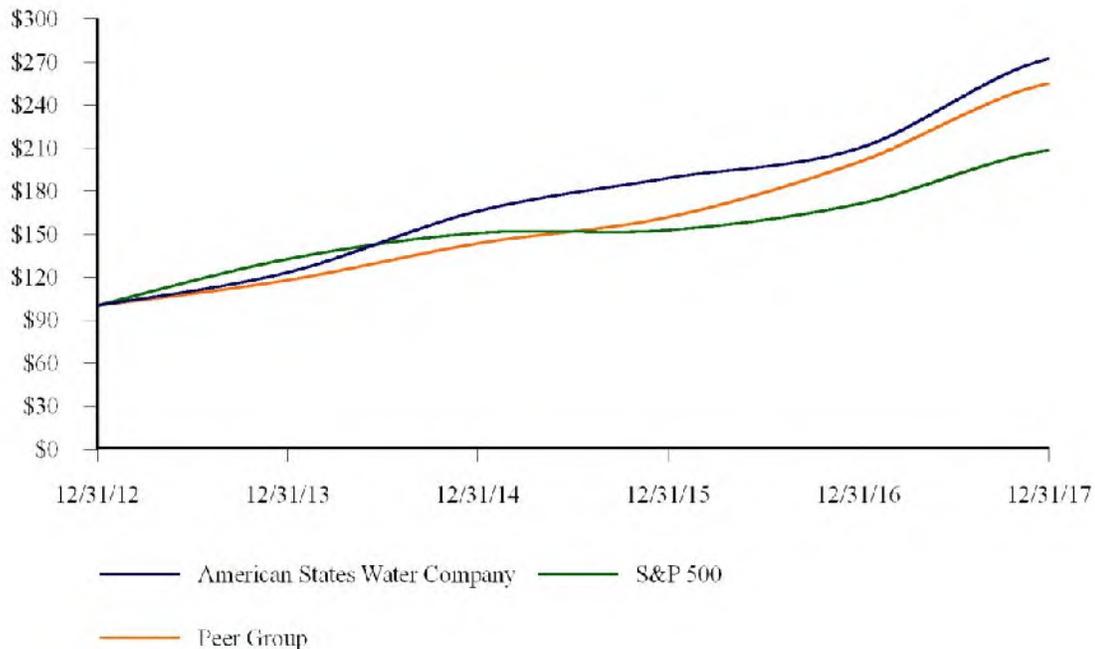

PART II

Item 5. Market for Registrant's Common Equity, Related Stockholder Matters and Issuer Purchases of Equity Securities**Stock Performance Graph**

The graph below compares the cumulative 5-year total return provided shareholders on American States Water Company's Common Shares relative to the cumulative total returns of the S&P 500 index and a peer group of eight publicly traded companies headquartered in the United States. The eight companies included in the Company's customized peer group are: American Water Works Company Inc., Aqua America Inc., Artesian Resources Corporation, California Water Service Group, Connecticut Water Service Inc., Middlesex Water Company, York Water Company and SJW Group.

An investment of \$100 (with reinvestment of all dividends) is assumed to have been made in our Common Shares, and in the common stock in the index and in the peer group on December 31, 2012. Relative performance is tracked through December 31, 2017.

COMPARISON OF 5 YEAR CUMULATIVE TOTAL RETURN*
among American States Water Company, the S&P 500 Index,
and a Peer Group

*\$100 invested on December 31, 2012 in stock or index, including reinvestment of dividends.
Fiscal year ending December 31.

Market Information Relating to Common Shares

Common Shares of American States Water Company are traded on the New York Stock Exchange (“NYSE”) under the symbol “AWR”. The intra-day high and low NYSE prices on the Common Shares for each quarter during the past two years were:

| | Stock Prices | |
|--------------------|--------------|----------|
| | High | Low |
| <u>2017</u> | | |
| First Quarter | \$ 45.92 | \$ 41.14 |
| Second Quarter | \$ 50.86 | \$ 43.08 |
| Third Quarter | \$ 51.78 | \$ 46.62 |
| Fourth Quarter | \$ 58.44 | \$ 49.55 |
| <u>2016</u> | | |
| First Quarter | \$ 47.24 | \$ 38.25 |
| Second Quarter | \$ 43.83 | \$ 37.28 |
| Third Quarter | \$ 44.46 | \$ 37.51 |
| Fourth Quarter | \$ 46.39 | \$ 37.47 |

The closing price of the Common Shares of American States Water Company on the NYSE on February 22, 2018 was \$53.49.

Approximate Number of Holders of Common Shares

As of February 22, 2018, there were 2,300 holders of record of the 36,715,525 outstanding Common Shares of American States Water Company. AWR owns all of the outstanding Common Shares of GSWC and ASUS. ASUS owns all of the outstanding stock of the Military Utility Privatization Subsidiaries.

Frequency and Amount of Any Dividends Declared and Dividend Restrictions

For the last two years, AWR has paid dividends on its Common Shares on or about March 1, June 1, September 1 and December 1. The following table lists the amounts of dividends paid on Common Shares of American States Water Company:

| | 2017 | 2016 |
|----------------|----------|----------|
| First Quarter | \$ 0.242 | \$ 0.224 |
| Second Quarter | \$ 0.242 | \$ 0.224 |
| Third Quarter | \$ 0.255 | \$ 0.224 |
| Fourth Quarter | \$ 0.255 | \$ 0.242 |
| Total | \$ 0.994 | \$ 0.914 |

AWR’s ability to pay dividends is subject to the requirement in its \$150.0 million revolving credit facility to maintain compliance with all covenants described in footnote (14) to the table in the section entitled “*Contractual Obligations, Commitments and Off Balance Sheet Arrangements*” included in Part II, Item 7, in Management’s Discussion and Analysis of Financial Condition and Results of Operation. GSWC’s maximum ability to pay dividends is restricted by certain Note Agreements to the sum of \$21.0 million plus 100% of consolidated net income from certain dates plus the aggregate net cash proceeds received from capital stock offerings or other instruments convertible into capital stock from various dates. Under the most restrictive of the Note Agreements, \$400.8 million was available from GSWC to pay dividends to AWR as of December 31, 2017. GSWC is also prohibited under the terms of senior notes from paying dividends if, after giving effect to the dividend, its total indebtedness to capitalization ratio (as defined) would be more than 0.6667-to-1. GSWC would have to issue additional debt of \$586.4 million to invoke this covenant as of December 31, 2017.

Under California law, AWR, GSWC and ASUS are each permitted to distribute dividends to its shareholders and repurchase its shares so long as the Board of Directors determines, in good faith, that either: (i) the value of the corporation's assets equals or exceeds the sum of its total liabilities immediately after the dividend, or (ii) its retained earnings equals or exceeds the amount of the distribution. Under the least restrictive of the California tests, approximately \$279.8 million was available to pay dividends to AWR's common shareholders and repurchase shares from AWR's common shareholders at December 31, 2017. Approximately \$232.2 million was available for GSWC to pay dividends to AWR at December 31, 2017 and approximately \$62.0 million was available for ASUS to pay dividends to AWR at December 31, 2017. However, ASUS's ability to pay dividends is further subject to the ability of each of its subsidiaries to pay dividends to it, which may, in turn, be restricted by the laws under the state in which the applicable subsidiary was formed.

AWR paid \$36.4 million in dividends to shareholders for the year ended December 31, 2017, as compared to \$33.4 million for the year ended December 31, 2016. GSWC paid dividends of \$27.7 million and \$25.5 million to AWR in 2017 and 2016, respectively. ASUS paid dividends of \$8.9 million and \$8.3 million to AWR in 2017 and 2016, respectively.

Other Information

The shareholders of AWR have approved the material features of all equity-compensation plans under which AWR directly issues equity securities. AWR did not directly issue any unregistered equity securities during 2017.

The following table provides information about AWR repurchases of its Common Shares during the fourth quarter of 2017:

| Period | Total Number of Shares Purchased | Average Price Paid per Share | Total Number of Shares Purchased as Part of Publicly Announced Plans or Programs (1) | Maximum Number of Shares That May Yet Be Purchased under the Plans or Programs (1)(3) |
|-----------------------|---|-------------------------------------|---|--|
| October 1 - 31, 2017 | 1,869 | \$ 53.02 | — | — |
| November 1 - 30, 2017 | 17,107 | \$ 54.46 | — | — |
| December 1 - 31, 2017 | 47,434 | \$ 55.95 | — | — |
| Total | 66,410 (2) | \$ 55.48 | — | — |

- (1) None of the common shares were repurchased pursuant to any publicly announced stock repurchase program.
- (2) Of this amount, 59,359 Common Shares were acquired on the open market for employees pursuant to AWR's 401(k) Plan and the remainder of the Common Shares were acquired on the open market for participants in the Common Share Purchase and Dividend Reinvestment Plan.
- (3) Neither the 401(k) plan nor the Common Share Purchase and Dividend Reinvestment Plan contains a maximum number of common shares that may be purchased in the open market.

(1) 2017 results include an \$8.3 million pretax gain, or \$0.13 per share, from the sale of GSWC's Ojai water system.

(2) Registrant adopted Accounting Standards Update 2015-17, *Balance Sheet Classification of Deferred Taxes*, as of December 31, 2015 on a prospective basis, whereby all deferred tax assets and liabilities are classified as noncurrent on the Registrant's balance sheet. Prior periods were not retrospectively adjusted.

(3) Registrant adopted Accounting Standard Update 2015-03, *Simplifying the Presentation of Debt Issuance Costs* as of December 31, 2016, whereby debt issuance costs and redemption premiums are presented as a direct reduction from the carrying value of the associated debt rather than as an asset. Total Assets and Long-Term Debt have been restated for all periods presented above.

Item 7. Management’s Discussion and Analysis of Financial Condition and Results of Operation

The following discussion and analysis provides information on AWR’s consolidated operations and assets, and, where necessary, includes specific references to AWR’s individual segments and/or its subsidiaries: GSWC and ASUS and its subsidiaries. Included in the following analysis is a discussion of water and electric gross margins. Water and electric gross margins are computed by subtracting total supply costs from total revenues. Registrant uses these gross margins as important measures in evaluating its operating results. Registrant believes these measures are useful internal benchmarks in evaluating the performance of GSWC.

The discussions and tables included in the following analysis also present Registrant’s operations in terms of earnings per share by business segment. Registrant believes that the disclosure of earnings per share by business segment provides investors with clarity surrounding the performance of its different services. Registrant reviews these measurements regularly and compares them to historical periods and to its operating budget. However, these measures, which are not presented in accordance with Generally Accepted Accounting Principles (“GAAP”), may not be comparable to similarly titled measures used by other entities and should not be considered as an alternative to operating income or earnings per share, which are determined in accordance with GAAP. A reconciliation of water and electric gross margins to the most directly comparable GAAP measures is included in the table under the section titled “*Operating Expenses: Supply Costs.*” Reconciliations to AWR’s diluted earnings per share are included in the discussions under the sections titled “*Summary Results by Segment.*”

Overview

Factors affecting our financial performance are summarized under *Forward-Looking Information.*

Water and Electric Segments:

GSWC's revenues, operating income and cash flows are earned primarily through delivering potable water to homes and businesses in California and the delivery of electricity in the Big Bear area of San Bernardino County, California. Rates charged to GSWC customers are determined by the CPUC. These rates are intended to allow recovery of operating costs and a reasonable rate of return on capital. GSWC plans to continue to seek additional rate increases in future years from the CPUC to recover operating and supply costs and receive reasonable returns on invested capital. Capital expenditures in future years at GSWC are expected to remain at higher levels than depreciation expense. When necessary, GSWC obtains funds from external sources in the capital markets and through bank borrowings.

Cost of Capital Proceeding for GSWC's Water Regions:

In early April 2017, GSWC filed its water cost of capital application with the CPUC in which it requested an overall weighted return on rate base of 9.11%, including an updated cost of debt of 6.6% and a return on equity ("ROE") of 11%. On February 6, 2018, GSWC, along with three other investor-owned water utilities that serve California, received a Proposed Decision from the CPUC issued in connection with the pending cost of capital proceeding. The Proposed Decision recommends an authorized ROE of 8.23% and a return on rate base of 7.39% for GSWC’s water segment, effective January 1, 2018. GSWC’s current authorized ROE for its water segment is 9.43% and its return on rate base is 8.34%. The Proposed Decision also continues the water cost of capital adjustment mechanism. If the CPUC adopts the recommendations in the Proposed Decision, the lower return on rate base is expected to decrease GSWC’s annual revenue requirement by approximately \$9.5 million beginning in 2018. GSWC filed comments on the Proposed Decision on February 26, 2018 with a final decision expected in late March 2018.

Claremont System:

GSWC successfully defended against an eminent domain lawsuit filed by the City of Claremont, California (the "City") to seize GSWC’s water system serving the City and parts of surrounding communities. In December 2016, the presiding judge issued a decision in the six week right-to-take trial, rejecting the City's attempt to take over the water system. In February 2017, it was further ordered that GSWC be entitled to recover \$7.6 million (“Judgment Amount”) of its litigation expenses and related defense costs from the City. During the first quarter of 2017, the City appealed both decisions. In October 2017, GSWC and the City entered into a settlement agreement whereby the City agreed to drop its appeals and in December 2017 paid \$2.0 million to GSWC as partial satisfaction of the Judgment Amount, including interest accrued through the end of 2017. GSWC recorded the \$2.0 million as a reduction to legal fees of \$1.8 million and an increase in interest income of \$200,000 in the fourth quarter of 2017. Furthermore, under the settlement agreement, quarterly interest-only payments calculated on the unpaid Judgment Amount of \$5.9 million are to be made by the City to GSWC over the next 12 years. If the City (i) makes all of the quarterly payments as required, and (ii) does not take formal action to condemn GSWC's Claremont water system before December 31, 2029, then on January 1, 2030, the unpaid Judgment Amount will be deemed satisfied by

the City without further payment required to be made to GSWC. However, if the City were to take formal action within the next 12 years or miss any of the required quarterly payments, the unpaid Judgment Amount and any unpaid accrued interest would immediately become due and payable. GSWC is unable to predict the actions that the City will take over the next 12 years and, as a result, will record the quarterly payments only to the extent that they are collected from the City over this period. GSWC serves approximately 11,000 customers in Claremont.

Ojai System:

In accordance with the terms of a settlement agreement reached in April 2017, on June 8, 2017 Casitas Municipal Water District ("Casitas") acquired the operating assets of GSWC's 2,900-connection Ojai water system by eminent domain for \$34.3 million in cash, including payments for customer receivables and regulatory assets, and Casitas along with certain interveners dismissed all claims against GSWC. As a result of this transaction, GSWC recorded a pretax gain of \$8.3 million, or \$0.13 per share, on the sale of the Ojai water system during the second quarter of 2017. The proceeds received from this transaction were used to repay a portion of GSWC's short-term borrowings.

Contracted Services Segment:

ASUS's revenues, operating income and cash flows are earned by providing water and/or wastewater services, including operation and maintenance services and construction of facilities at the water and/or wastewater systems at various military installations, pursuant to 50-year firm fixed-price contracts. The contract price for each of these 50-year contracts is subject to annual economic price adjustments. Additional revenues generated by contract operations are primarily dependent on new construction activities under contract modifications with the U.S. government or agreements with other third-party prime contractors.

New Privatization Contract Award:

On September 29, 2017, ASUS was awarded a new 50-year contract by the U.S. government to operate, maintain, and provide construction management services for the water distribution, and wastewater collection and treatment facilities at Fort Riley, a United States Army installation located in Kansas. The initial value of the contract is approximately \$601.4 million over the 50-year period and is subject to annual economic price adjustments. This initial value is subject to adjustment based on the results of a joint inventory of assets to be performed. ASUS will assume operations at Fort Riley following the completion of a six- to twelve-month transition period currently underway.

Eglin Air Force Base ("Eglin"):

On June 15, 2017, ASUS assumed operations of the water and wastewater systems at Eglin in Florida after completing a transition period and a detailed joint inventory study. The value of the 50-year contract is approximately \$702.4 million. The contract is subject to annual economic price adjustments.

Tax Cuts and Jobs Act:

On December 22, 2017, the Tax Cuts and Jobs Act (the "Tax Act") was signed into federal law. The provisions of this major tax reform are generally effective January 1, 2018. Among its significant provisions, the Tax Act (i) reduces the federal corporate income tax rate from 35% to 21%; (ii) eliminates bonus depreciation for regulated utilities, but allows 100% expensing for the cost of qualified property for non-regulated businesses; (iii) eliminates the provision that treated contributions in aid of construction provided to regulated water utilities as non-taxable; (iv) eliminates the domestic production activities deduction, and (v) limits the amount of net interest that can be deducted; however, this limitation is not applicable to regulated utilities and, therefore is not anticipated to have a material impact to Registrant's ability to deduct net interest.

The most significant change impacting Registrant is the reduction of the corporate federal income tax rate from 35% to 21% effective January 1, 2018. As of December 31, 2017, the cumulative net deferred income tax liabilities (for both flow-through and normalized temporary differences) related to GSWC's rate-regulated activities were reduced by approximately \$90.1 million to reflect the new 21% tax rate. However, this did not impact earnings since this reduction in net deferred income tax liabilities was offset by a corresponding increase to a regulatory liability. The impact to future customer rates related to this regulatory liability is anticipated to generally occur over a period consistent with the remaining lives of the property giving rise to this regulatory liability. The remeasurement of other deferred income tax balances not related to rate-regulated activities did not have a significant impact to Registrant's consolidated results of operations. However, the Tax Act did have a negative impact on earnings at the water segment, which was mostly offset by an increase in earnings at AWR (parent) and, to a lesser extent, at the other two business segments.

GSWC expects the Tax Act to lower rates charged to customers. The estimated benefit to customers is primarily driven by the reduction in the federal income tax rate used in computing customer rates. The effect of the excess deferred income taxes created by the reduction in the federal tax rate and tracked in the regulatory liability, discussed above, is expected to be refunded to customers and may also affect future customer rates. Property-related deferred tax liabilities reduce GSWC's rate base; however, the remeasurement of deferred tax liabilities resulting from the implementation of the Tax Act will not impact GSWC's rate base because of the offsetting increase in a regulatory liability discussed above. Going forward, as new plant is placed in service, the lower federal corporate tax rate will result in lower deferred tax liabilities.

The Tax Act also eliminates bonus depreciation for utilities. As a result of the lower federal tax rate and elimination of bonus depreciation, GSWC expects the Tax Act will create growth in rate base for the same level of expected capital expenditures, partially offset by the impact of higher cost of capital from an increased need to raise debt and/or equity due to lower cash flows from operating activities.

Summary Results by Segment

The table below sets forth diluted earnings per share by business segment for AWR's operations:

| | Diluted Earnings per Share | | | |
|-------------------------------------|----------------------------|------------|--------|------|
| | Year Ended | | CHANGE | |
| | 12/31/2017 | 12/31/2016 | | |
| Water | \$ 1.35 | \$ 1.17 | \$ | 0.18 |
| Electric | 0.11 | 0.10 | | 0.01 |
| Contracted services | 0.37 | 0.33 | | 0.04 |
| AWR (parent) | 0.05 | 0.02 | | 0.03 |
| Totals from operations, as reported | \$ 1.88 | \$ 1.62 | \$ | 0.26 |

Water Segment:

For the year ended December 31, 2017, fully diluted earnings per share for the water segment increased by \$0.18 per share to \$1.35 per share, as compared to \$1.17 per share for 2016 due, in large part, to the one-time \$0.13 per share pretax gain on the sale of Ojai assets in June 2017. In addition, in February 2017, the CPUC approved recovery of incremental costs related to California's drought state of emergency, which were previously expensed. As a result of this approval, during the first quarter of 2017 GSWC recorded a regulatory asset and a corresponding increase to pretax earnings of \$1.5 million, or \$0.02 per share, of which \$1.2 million was reflected as a reduction to other operation expenses and approximately \$260,000 was reflected as additional revenue.

Excluding the impact of the items discussed above and an increase in billed surcharges which have no impact to earnings, diluted earnings from the water segment for 2017 increased by \$0.03 per share as compared to 2016 due to the following items, which impacted the comparability between the two periods:

- A decrease in operating expenses (excluding supply costs) of \$3.4 million, or \$0.05 per share, due mostly to (i) lower legal expenses related to condemnation matters, including the \$1.8 million reduction in legal fees recorded in December 2017 pursuant to the Claremont settlement agreement, (ii) lower maintenance costs, and (iii) incurring only a partial year of Ojai-related operating expenses as a result of the sale. These decreases were partially offset by higher medical insurance costs, conservation costs, general rate-case-related expenses, and property and other taxes, as well as an \$800,000 reduction in operating expenses recorded in the fourth quarter of 2016 as a result of the CPUC's water general rate case decision, which granted recovery of previously incurred costs tracked in memorandum accounts.
- An increase in interest and other income, net of interest expense, of \$2.0 million, or \$0.03 per share, due primarily to (i) higher gains recorded on investments as compared to 2016, (ii) amounts collected from developers on certain outstanding balances owed to GSWC, (iii) higher interest income on GSWC's regulatory assets resulting mostly from an increase in the 90-day commercial paper rate, and (iv) interest income related to the Claremont settlement payment received in December 2017 previously discussed.

The increase in diluted earnings from the water segment discussed above were partially offset by the following:

- An overall decrease in the water gross margin of \$2.3 million, or \$0.03 per share, largely due to the cessation of Ojai operations in June 2017. This was partially offset by revenues generated from CPUC-approved second-year rate increases effective January 1, 2017.

- An overall increase in water's effective income tax rate ("ETR"), which negatively impacted water earnings by approximately \$0.02 per share. The increase in the ETR was due, in large part, to the remeasurement of certain non-rate-regulated deferred tax assets (primarily compensation- and benefit-related items) in connection with the Tax Act, which negatively impacted water earnings by approximately \$0.03 per share. This was partially offset by changes in flow-through and permanent items at the water segment.

Electric Segment:

For the year ended December 31, 2017, diluted earnings from the electric segment increased by \$0.01 per share as compared to the same period in 2016. Operating expenses (other than supply costs) decreased by \$1.2 million primarily due to additional costs incurred in 2016 in response to power outages caused by severe winter storms experienced in January 2016, lower regulatory costs, and lower costs associated with energy efficiency and solar power programs approved by the CPUC. There was also a decrease in the effective income tax rate for the electric segment as compared to the same period in 2016 resulting from flow-through items. These increases to earnings were partially offset by a lower electric gross margin, which was due to a downward adjustment to the revenue requirement to reflect a decrease in the general office allocation as stipulated in the CPUC's December 2016 decision on the water general rate case.

Contracted Services Segment:

For the year ended December 31, 2017, diluted earnings from contracted services were \$0.37 per share, compared to \$0.33 per share for the same period in 2016. There was an increase in management fee revenues from the successful resolution of various price adjustments and asset transfers received during 2016 and 2017. This includes approximately \$1.0 million, or \$0.02 per share, of retroactive management fees recorded in 2017 which related to periods prior to 2017, as compared to \$421,000, or \$0.01 per share, of retroactive management fees recorded in 2016 which related to periods prior to 2016. There was also an increase in management fees and construction revenues generated from the operations at Eglin Air Force Base ("Eglin"), which began in June 2017. These increases to earnings were partially offset by higher operating costs due to Eglin's transition activities and joint inventory study, as well as increases in labor and outside services costs related to business development and compliance.

AWR (parent):

For the year ended December 31, 2017, diluted earnings from AWR (parent) increased \$0.03 per share compared to 2016 due to lower state taxes, as well as the remeasurement of federal deferred tax liabilities associated with the California state unitary deferred tax balances. The remeasurement was based on the Tax Act's lower federal corporate tax rate of 21% as compared to 35%, which increased earnings at AWR (parent) by approximately \$0.02 per share during 2017.

The following discussion and analysis for the years ended December 31, 2017, 2016 and 2015 provides information on AWR's consolidated operations and assets and, where necessary, includes specific references to AWR's individual segments and subsidiaries: GSWC and ASUS and its subsidiaries.

Consolidated Results of Operations — Years Ended December 31, 2017 and 2016 (amounts in thousands, except per share amounts):

| | Year Ended 12/31/2017 | Year Ended 12/31/2016 | \$ CHANGE | % CHANGE |

* not applicable

Operating Revenues

General

Registrant relies upon approvals by the CPUC of rate increases to recover operating expenses and to provide for a return on invested and borrowed capital used to fund utility plant for GSWC. Registrant relies on economic price adjustments and equitable adjustments by the U.S. government in order to recover operating expenses and provide a profit margin for ASUS. If adequate rate relief or adjustments are not granted in a timely manner, current operating revenues and earnings can be negatively impacted. ASUS's earnings are also impacted by the level of additional construction projects at the Military Utility Privatization Subsidiaries, which may or may not continue at current levels in future periods.

Water

For the year ended December 31, 2017, revenues from water operations increased by \$3.4 million to \$306.3 million, compared to \$302.9 million for the year ended December 31, 2016. The increase was primarily due to second-year rate increases effective January 1, 2017, and rate increases to specifically cover increases in supply costs experienced in certain rate-making areas. The rate changes related to supply costs are largely offset by a corresponding increase in supply costs, resulting in an insignificant change to the water gross margin. There were also new surcharges implemented during 2017 to recover previously incurred costs, which were offset by a corresponding increase in operating expenses (primarily administrative and general) totaling \$3.6 million, resulting in no impact to earnings. These increases in revenues were partially offset by lower revenues due to the cessation of Ojai operations in June 2017.

Billed water consumption for the year ended December 31, 2017 increased approximately 4% as compared to 2016. In general, changes in consumption do not have a significant impact on recorded revenues due to the CPUC-approved WRAM accounts in place in the majority of GSWC's rate-making areas. GSWC records the difference between what it bills its water customers and that which is authorized by the CPUC in the WRAM accounts as regulatory assets or liabilities.

Electric

In 2016, the CPUC granted BVES's request to defer the filing of its next electric general rate case to 2017, setting new rates for the years 2018 through 2021. As a result, adopted base revenues for 2017 were based on 2016 adopted base revenues, adjusted for the change in the general office allocation approved by the CPUC in the water general rate case. For the year ended December 31, 2017, revenues from electric operations were \$34.0 million as compared to \$35.8 million for the year ended December 31, 2016. This decrease was primarily due to the reduction in the adopted revenue requirement for electric to reflect a decrease in the general office allocation. In May 2017, BVES filed its general rate case application with the CPUC. A final decision is expected in 2018.

Billed electric usage for the year ended December 31, 2017 decreased slightly as compared to the same period in 2016. Due to the CPUC-approved base revenue requirement adjustment mechanism ("BRRAM"), which adjusts base revenues to adopted levels authorized by the CPUC, changes in usage do not have a significant impact on earnings.

Contracted Services

Revenues from contracted services are composed of construction revenues (including renewal and replacements) and management fees for operating and maintaining the water and/or wastewater systems at various military bases. For the year ended December 31, 2017, revenues from contracted services were \$100.3 million as compared to \$97.4 million for 2016. There was an increase in ongoing operations and maintenance management fees due to the successful resolution of various price adjustments and asset transfers during 2016 and 2017, as well as the commencement of operations at Eglin in June 2017. Included in management fees for 2017 was approximately \$1.0 million in retroactive revenues related to periods prior to 2017, as compared to \$421,000 of retroactive management fees recorded in 2016 which related to periods prior to 2016. These increases were partially offset by a decrease in construction activity in 2017 as compared to 2016.

ASUS's subsidiaries continue to enter into U.S. government-awarded contract modifications and agreements with third-party prime contractors for new construction projects at the military bases served. During 2017, ASUS was awarded approximately \$20.2 million in new construction projects, the majority of which are expected to be completed during 2018. Earnings and cash flows from modifications to the original 50-year contracts with the U.S. government and agreements with third-party prime contractors for additional construction projects may or may not continue in future periods.

Operating Expenses:**Supply Costs**

Supply costs for the water segment consist of purchased water, purchased power for pumping, groundwater production assessments and changes in the water supply cost balancing accounts. Supply costs for the electric segment consist of purchased power for resale, the cost of natural gas used by BVES's generating unit, the cost of renewable energy credits and changes in the electric supply cost balancing account. Water and electric gross margins are computed by subtracting total supply costs from total revenues. Registrant uses these gross margins and related percentages as an important measure in evaluating its operating results. Registrant believes these measures are useful internal benchmarks in evaluating the utility business performance within its water and electric segments. Registrant reviews these measurements regularly and compares them to historical periods and to its operating budget. However, these measures, which are not presented in accordance with GAAP, may not be comparable to similarly titled measures used by other entities and should not be considered as an alternative to operating income, which is determined in accordance with GAAP.

Total supply costs comprise the largest segment of total operating expenses. Supply costs accounted for 28.1% and 26.8% of total operating expenses for the years ended December 31, 2017 and 2016, respectively.

The table below provides the amounts (in thousands) of increases (decreases) and percent changes in water and electric revenues, supply costs and gross margins during the years ended December 31, 2017 and 2016:

| | Year Ended 12/31/2017 | Year Ended 12/31/2016 | \$ CHANGE | % CHANGE |
|---|--------------------------|--------------------------|--------------|-------------|
| WATER OPERATING REVENUES (1) | \$ 306,332 | \$ 302,931 | \$ 3,401 | 1.1% |
| WATER SUPPLY COSTS: | | | | |
| Water purchased (1) | 68,302 | 64,442 | 3,860 | 6.0% |
| Power purchased for pumping (1) | 8,518 | 8,663 | (145) | -1.7% |
| Groundwater production assessment (1) | 18,638 | 14,993 | 3,645 | 24.3% |
| Water supply cost balancing accounts (1) | (20,289) | (14,813) | (5,476) | 37.0% |
| TOTAL WATER SUPPLY COSTS | \$ 75,169 | \$ 73,285 | \$ 1,884 | 2.6% |
| WATER GROSS MARGIN (2) | \$ 231,163 | \$ 229,646 | \$ 1,517 | 0.7% |
| ELECTRIC OPERATING REVENUES (1) | \$ 33,969 | \$ 35,771 | \$ (1,802) | -5.0% |
| ELECTRIC SUPPLY COSTS: | | | | |
| Power purchased for resale (1) | 10,720 | 10,387 | 333 | 3.2% |
| Electric supply cost balancing accounts (1) | 2,350 | 2,607 | (257) | -9.9% |
| TOTAL ELECTRIC SUPPLY COSTS | \$ 13,070 | \$ 12,994 | \$ 76 | 0.6% |
| ELECTRIC GROSS MARGIN (2) | \$ 20,899 | \$ 22,777 | \$ (1,878) | -8.2% |

- (1) As reported on AWR's Consolidated Statements of Income, except for supply-cost-balancing accounts. The sums of water and electric supply-cost balancing accounts in the table above are shown on AWR's Consolidated Statements of Income and totaled \$(17.9) million and \$(12.2) million for the years ended December 31, 2017 and 2016, respectively. Revenues include surcharges, which increase both revenues and operating expenses by corresponding amounts, thus having no net earnings impact.
- (2) Water and electric gross margins do not include depreciation and amortization, maintenance, administrative and general, property and other taxes, and other operation expenses.

Two of the principal factors affecting water supply costs are the amount of water produced and the source of the water. Generally, the variable cost of producing water from wells is less than the cost of water purchased from wholesale suppliers. Under the CPUC-approved Modified Cost Balancing Account ("MCBA"), GSWC tracks adopted and actual expense levels for purchased water, power purchased for pumping and pump taxes. GSWC records the variances (which include the effects of changes in both rate and volume) between adopted and actual purchased water, purchased power and pump tax expenses. GSWC recovers from or refunds to customers the amount of such variances. GSWC tracks these variances individually for each water ratemaking area.

The overall actual percentages for purchased water for the years ended December 31, 2017 and 2016 were 42% and 40%, respectively, as compared to the adopted percentages of 28% and 29% for 2017 and 2016, respectively. The higher actual percentages of purchased water as compared to adopted percentages resulted primarily from several wells being out of service.

Purchased water costs for the year ended December 31, 2017 increased to \$68.3 million as compared to \$64.4 million for the same period in 2016 primarily due to an increase of purchased water in the supply mix as a result of several wells being out of service, as well as an increase in wholesale water costs as compared to the year ended December 31, 2016.

For the year ended December 31, 2017, the cost of power purchased for pumping decreased slightly to \$8.5 million as compared to \$8.7 million for the same period in 2016 primarily due to decreases in pumped water. Groundwater production assessments were \$18.6 million in 2017 as compared to \$15.0 million in 2016 due to an increase in pump tax rates and pump taxes paid for water storage rights during 2017 as compared to 2016.

The under-collection in the water supply cost balancing account increased \$5.5 million during the year ended December 31, 2017 as compared to the same period in 2016 due to the higher purchased water costs as well as higher groundwater production assessments as compared to adopted water supply costs.

For the year ended December 31, 2017, the cost of power purchased for resale to BVES's customers was \$10.7 million as compared to \$10.4 million for the same period in 2016. The average price per megawatt-hour ("MWh"), including fixed costs, increased to \$73.03 per MWh in 2017 from \$69.54 per MWh for the year ended December 31, 2016.

Other Operation

The primary components of other operation expenses for GSWC include payroll, materials and supplies, chemicals and water treatment costs and outside service costs of operating the regulated water and electric systems, including the costs associated with transmission and distribution, pumping, water quality, meter reading, billing and operations of district offices. Registrant's contracted services operations incur many of the same types of expenses. For the years ended December 31, 2017 and 2016, other operation expenses by business segment consisted of the following amounts (in thousands):

| | Year Ended 12/31/2017 | Year Ended 12/31/2016 | \$ CHANGE | % CHANGE |
|-----------------------|-----------------------------|-----------------------------|-----------------|-------------|
| Water Services | \$ 22,189 | \$ 21,649 | \$ 540 | 2.5% |
| Electric Services | 2,688 | 3,122 | (434) | -13.9% |
| Contracted Services | 5,117 | 3,486 | 1,631 | 46.8% |
| Total other operation | <u>\$ 29,994</u> | <u>\$ 28,257</u> | <u>\$ 1,737</u> | <u>6.1%</u> |

During 2017, there was a \$433,000 increase in surcharges billed to customers to recover previously incurred other operation expenses approved by the CPUC as part of the final decision on the water general rate case. These surcharges increased revenues and water gross margin with a corresponding increase in other operation expenses, resulting in no impact to earnings. Furthermore, in February 2017, the CPUC approved the recovery of incremental drought-related costs incurred in 2015 and 2016 during the drought state of emergency in California. As a result of the CPUC's approval, GSWC recorded a \$1.2 million regulatory asset with a corresponding reduction in other operation expenses during the first quarter of 2017. Excluding the impact of surcharges and the recovery of drought-related costs, other operation expenses at the water segment increased by \$1.3 million during the year ended December 31, 2017 as compared to the same period in 2016. The increase was due primarily to higher conservation costs, labor and bad debt expense.

The decrease in other operation expenses at the electric segment was due to outside services costs and labor costs incurred in response to power outages caused by severe winter storms experienced in January 2016. There were no similar events in 2017.

For the year ended December 31, 2017, total other operation expenses for the contracted services segment increased mainly due to transition costs incurred at Eglin, including a joint inventory study conducted with the U.S. government for the water and wastewater system infrastructure. ASUS assumed operations at Eglin in June 2017, which further increased other operation expenses in 2017 as compared to 2016. A joint inventory study with the U.S. government is currently underway at Fort Riley as part of its transition to ASUS. In accordance with the 50-year contract with the U.S. government, ASUS receives revenues to help cover the cost of the transition at Fort Riley. ASUS will assume the operations at Fort Riley in 2018 following the completion of a transition period currently underway.

Administrative and General

Administrative and general expenses include payroll related to administrative and general functions, the related employee benefits, insurance expenses, outside legal and consulting fees, regulatory utility commission expenses, expenses associated with being a public company and general corporate expenses charged to expense accounts. For the years ended December 31, 2017 and 2016, administrative and general expenses by business segment, including AWR (parent), consisted of the following amounts (in thousands):

| | Year Ended 12/31/2017 | Year Ended 12/31/2016 | \$ CHANGE | % CHANGE |
|----------------------------------|-----------------------------|-----------------------------|--------------|-------------|
| Water Services | \$ 55,352 | \$ 56,165 | \$ (813) | -1.4% |
| Electric Services | 6,879 | 7,901 | (1,022) | -12.9% |
| Contracted Services | 19,335 | 16,909 | 2,426 | 14.3% |
| AWR (parent) | 96 | 19 | 77 | 405.3% |
| Total administrative and general | \$ 81,662 | \$ 80,994 | \$ 668 | 0.8% |

Surcharges were implemented in 2017 to recover previously incurred administrative and general costs approved by the CPUC as part of the final decision on the water general rate case issued in March 2017. A \$3.3 million increase in revenues and water gross margin from these surcharges was offset by a corresponding increase in administrative and general expense to reflect the recovery of these costs, resulting in no impact to earnings. Excluding the increase in billed surcharges, administrative and general expenses at the water segment decreased by \$4.1 million due primarily to lower legal expenses related to condemnation matters as compared to 2016. In addition, the Claremont settlement payment received in December 2017 included approximately \$1.8 million in reimbursement of litigation costs, which was reflected as a reduction to legal expenses in 2017. These decreases were partially offset by higher medical insurance costs and general-rate-case-related expenses, as well as an \$800,000 reduction to administrative and general expenses recorded in 2016 to reflect the CPUC's approval for recovery of previously incurred costs that were being tracked in CPUC-authorized memorandum accounts.

For the year ended December 31, 2017, administrative and general expenses for the electric segment decreased by \$1.0 million as compared to 2016 due to lower regulatory costs, as well as decreases in costs associated with the energy-efficiency and solar-initiative programs approved by the CPUC.

For the year ended December 31, 2017, administrative and general expenses for contracted services increased by \$2.4 million due primarily to (i) an increase in labor-related costs, (ii) the start of operations at Eglin in June 2017, which increased administrative and general expenses in 2017 as compared to 2016, and (iii) an increase in outside services costs related to new business development and compliance.

Depreciation and Amortization

For the years ended December 31, 2017 and 2016, depreciation and amortization expense by segment consisted of the following amounts (in thousands):

| | Year Ended 12/31/2017 | Year Ended 12/31/2016 | \$ CHANGE | % CHANGE |
|-------------------------------------|-----------------------------|-----------------------------|--------------|-------------|
| Water Services | \$ 35,706 | \$ 35,777 | \$ (71) | -0.2% |
| Electric Services | 2,146 | 2,027 | 119 | 5.9% |
| Contracted Services | 1,179 | 1,046 | 133 | 12.7% |
| Total depreciation and amortization | \$ 39,031 | \$ 38,850 | \$ 181 | 0.5% |

For the year ended December 31, 2017, depreciation and amortization expense at the water segment decreased due primarily to retirements recorded during 2017 and 2016, as well as the sale of the Ojai utility assets in June 2017. These decreases were largely offset by additions to utility plant during 2017. The increases for the electric and contracted services segments were due primarily to additions to plant in 2017.

Maintenance

For the years ended December 31, 2017 and 2016, maintenance expense by segment consisted of the following amounts (in thousands):

| | Year Ended 12/31/2017 | Year Ended 12/31/2016 | \$ CHANGE | % CHANGE |
|---------------------|-----------------------------|-----------------------------|--------------|-------------|
| Water Services | \$ 12,101 | \$ 13,783 | \$ (1,682) | -12.2% |
| Electric Services | 869 | 736 | 133 | 18.1% |
| Contracted Services | 2,206 | 1,951 | 255 | 13.1% |
| Total maintenance | \$ 15,176 | \$ 16,470 | \$ (1,294) | -7.9% |

Maintenance expense for water services decreased by \$1.7 million due to an overall lower level of planned and unplanned maintenance in 2017. Maintenance expense for contracted services increased due primarily to the commencement of operations at Eglin in June 2017.

Property and Other Taxes

For the years ended December 31, 2017 and 2016, property and other taxes by segment, consisted of the following amounts (in thousands):

| | Year Ended 12/31/2017 | Year Ended 12/31/2016 | \$ CHANGE | % CHANGE |
|--------------------------------|-----------------------------|-----------------------------|--------------|-------------|
| Water Services | \$ 15,336 | \$ 14,362 | \$ 974 | 6.8% |
| Electric Services | 1,066 | 1,082 | (16) | -1.5% |
| Contracted Services | 1,503 | 1,357 | 146 | 10.8% |
| Total property and other taxes | \$ 17,905 | \$ 16,801 | \$ 1,104 | 6.6% |

Property and other taxes increased overall by \$1.1 million during 2017 as compared to 2016 due primarily to capital additions at the water segment.

ASUS Construction

For the year ended December 31, 2017, construction expenses for contracted services were \$49.8 million, decreasing by \$3.9 million compared to the same period in 2016 due to an overall decrease in construction activity.

Gain on Sale of Assets

In June 2017, GSWC completed the sale of its Ojai water system to Casitas for \$34.3 million, resulting in a pretax gain of \$8.3 million on the sale of the assets.

Interest Expense

For the years ended December 31, 2017 and 2016, interest expense by segment, including AWR (parent), consisted of the following amounts (in thousands):

| | Year Ended 12/31/2017 | Year Ended 12/31/2016 | \$ CHANGE | % CHANGE |
|------------------------|-----------------------------|-----------------------------|--------------|-------------|
| Water Services | \$ 20,670 | \$ 20,430 | \$ 240 | 1.2% |
| Electric Services | 1,385 | 1,352 | 33 | 2.4% |
| Contracted Services | 269 | 76 | 193 | 253.9% |
| AWR (parent) | 258 | 134 | 124 | 92.5% |
| Total interest expense | \$ 22,582 | \$ 21,992 | \$ 590 | 2.7% |

Overall, interest expense for the year ended December 31, 2017 increased by \$590,000 as compared to the same period in 2016 due largely to higher average borrowings on the revolving credit facility as compared to 2016. The borrowings

were used to fund operations and a portion of capital expenditures. The proceeds received in June 2017 from the completed sale of GSWC's Ojai system were used to repay a portion of these borrowings. Borrowings on the revolving credit facility are expected to continue in 2018 to fund operations and a portion of capital expenditures.

Interest Income

For the years ended December 31, 2017 and 2016, interest income by business segment, including AWR (parent), consisted of the following amounts (in thousands):

| | Year Ended 12/31/2017 | Year Ended 12/31/2016 | \$ CHANGE | % CHANGE |
|-----------------------|-----------------------------|-----------------------------|--------------|-------------|
| Water Services | \$ 1,761 | \$ 734 | \$ 1,027 | 139.9% |
| Electric Services | 5 | 15 | (10) | -66.7% |
| Contracted Services | 14 | 8 | 6 | 75.0% |
| AWR (parent) | 10 | — | 10 | —% |
| Total interest income | \$ 1,790 | \$ 757 | \$ 1,033 | 136.5% |

Interest income increased by \$1.0 million for the year ended December 31, 2017 as compared to the same period in 2016 due primarily to (i) the collection of certain amounts from developers previously owed to GSWC, (ii) higher interest income on GSWC's regulatory assets resulting mostly from an increase in the 90-day commercial paper rate, and (iii) interest income related to the Claremont settlement payment received in December 2017.

Other, net

For the year ended December 31, 2017, other income increased by \$1.1 million primarily due to higher gains recorded on investments held for a retirement benefit plan resulting from more favorable market conditions as compared to 2016.

Income Tax Expense

For the years ended December 31, 2017 and 2016, income tax expense by segment, including AWR (parent), consisted of the following amounts (in thousands):

| | Year Ended 12/31/2017 | Year Ended 12/31/2016 | \$ CHANGE | % CHANGE |
|--------------------------|-----------------------------|-----------------------------|--------------|-------------|
| Water Services | \$ 32,212 | \$ 25,894 | \$ 6,318 | 24.4% |
| Electric Services | 1,847 | 2,715 | (868) | -32.0% |
| Contracted Services | 7,136 | 6,672 | 464 | 7.0% |
| AWR (parent) | (2,221) | (546) | (1,675) | 306.8% |
| Total income tax expense | \$ 38,974 | \$ 34,735 | \$ 4,239 | 12.2% |

Consolidated income tax expense for the year ended December 31, 2017 increased by \$4.2 million due primarily to an increase in pretax income. AWR's effective income tax rate ("ETR") was 36.0% and 36.8% for the years ended December 31, 2017 and 2016, respectively. The ETR for GSWC was 38.8% for 2017 as compared to 37.9% for 2016 due, in part, to the remeasurement of non rate-regulated deferred tax assets as a result of the Tax Act, which reduced the federal corporate tax rate from 35% to 21%. The earnings impact of this increase in GSWC's ETR was largely offset by a reduction in deferred tax liabilities at AWR (parent), due also to the remeasurement of federal deferred tax liabilities associated with the California state unitary deferred tax balance.

Consolidated Results of Operations — Years Ended December 31, 2016 and 2015 (amounts in thousands, except per share amounts):

| | Year Ended 12/31/2016 | Year Ended 12/31/2015 | \$ CHANGE | % CHANGE |
|---|--------------------------|--------------------------|--------------|-------------|
| OPERATING REVENUES | | | | |
| Water | \$ 302,931 | \$ 328,511 | \$ (25,580) | -7.8% |
| Electric | 35,771 | 36,039 | (268) | -0.7% |
| Contracted services | 97,385 | 94,091 | 3,294 | 3.5% |
| Total operating revenues | 436,087 | 458,641 | (22,554) | -4.9% |
| OPERATING EXPENSES | | | | |
| Water purchased | 64,442 | 62,726 | 1,716 | 2.7% |
| Power purchased for pumping | 8,663 | 8,988 | (325) | -3.6% |
| Groundwater production assessment | 14,993 | 13,648 | 1,345 | 9.9% |
| Power purchased for resale | 10,387 | 10,395 | (8) | -0.1% |
| Supply cost balancing accounts | (12,206) | 7,785 | (19,991) | -256.8% |
| Other operation | 28,257 | 28,429 | (172) | -0.6% |
| Administrative and general | 80,994 | 79,817 | 1,177 | 1.5% |
| Depreciation and amortization | 38,850 | 42,033 | (3,183) | -7.6% |
| Maintenance | 16,470 | 16,885 | (415) | -2.5% |
| Property and other taxes | 16,801 | 16,636 | 165 | 1.0% |
| ASUS construction | 53,720 | 52,810 | 910 | 1.7% |
| Total operating expenses | 321,371 | 340,152 | (18,781) | -5.5% |
| OPERATING INCOME | 114,716 | 118,489 | (3,773) | -3.2% |
| OTHER INCOME AND EXPENSES | | | | |
| Interest expense | (21,992) | (21,088) | (904) | 4.3% |
| Interest income | 757 | 458 | 299 | 65.3% |
| Other, net | 997 | 356 | 641 | 180.1% |
| | (20,238) | (20,274) | 36 | -0.2% |
| INCOME FROM OPERATIONS BEFORE INCOME TAX EXPENSE | 94,478 | 98,215 | (3,737) | -3.8% |
| Income tax expense | 34,735 | 37,731 | (2,996) | -7.9% |
| NET INCOME | \$ 59,743 | \$ 60,484 | \$ (741) | -1.2% |
| Basic earnings per Common Share | \$ 1.63 | \$ 1.61 | \$ 0.02 | 1.2% |
| Fully diluted earnings per Common Share | \$ 1.62 | \$ 1.60 | \$ 0.02 | 1.3% |

The table below sets forth diluted earnings per share by business segment for AWR's operations:

| | Diluted Earnings per Share | | |
|-------------------------------------|----------------------------|------------|-----------|
| | Year Ended | | |
| | 12/31/2016 | 12/31/2015 | CHANGE |
| Water | \$ 1.17 | \$ 1.19 | \$ (0.02) |
| Electric | 0.10 | 0.07 | 0.03 |
| Contracted services | 0.33 | 0.32 | 0.01 |
| AWR (parent) | 0.02 | 0.02 | — |
| Totals from operations, as reported | \$ 1.62 | \$ 1.60 | \$ 0.02 |

Water Segment:

For the year ended December 31, 2016, fully diluted earnings per share for the water segment decreased by \$0.02 per share to \$1.17 per share, as compared to \$1.19 per share for 2015. The discussion below includes the major items, which impacted the comparability of the two periods.

- The water gross margin decreased by \$9.9 million as a result of lower 2016 adopted revenues authorized by the CPUC's decision in the water general rate case ("GRC"), which sets new rates for the years 2016 - 2018. The adopted gross margin in this rate cycle (starting with 2016) was lower due, in large part, to decreases in adopted expenses including depreciation expense resulting from an updated depreciation study, and many other operating expenses resulting from GSWC's cost containment initiatives. The reduction in the water gross margin was mostly offset by corresponding decreases in depreciation and certain other operating expenses as discussed below. The decrease in the adopted water gross margin was also partially offset by (i) the recognition of a portion of the 2015 WRAM revenues that had previously been deferred as required under the accounting guidance for revenue programs such as the WRAM, (ii) new revenues generated from a water system acquired in October 2015, (iii) higher revenues due to increased consumption as compared to 2015 from customers that are not subject to conservation rates, and (iv) revenues from advice letter capital projects approved by the CPUC in 2015.
- Total operating expenses (excluding supply costs, and condemnation-related costs discussed below) decreased by approximately \$7.6 million. The lower operating expenses, most of which were reflected in the lower gross margin, included a decrease in (i) depreciation expense resulting from a new depreciation study approved in the water GRC, (ii) allocated costs to the water segment from corporate headquarters as stipulated in the water GRC, and (iii) pension and other operating expenses. In addition, the CPUC's approval for recovery of approximately \$800,000 of previously incurred costs, which were being tracked in CPUC-authorized memorandum accounts, was reflected as a decrease in operating expenses.
- Negatively impacting the water segment's results was an increase of approximately \$4.0 million in legal and other outside service costs incurred on condemnation-related matters.
- Favorably impacting the water segment's results was (i) a decrease in the effective income tax rate for the water segment due to differences between book and taxable income that are treated as flow-through adjustments in accordance with regulatory requirements, and (ii) the cumulative impact of lower Common Shares outstanding resulting from stock repurchase programs in 2014 and 2015.

Electric Segment:

For the year ended December 31, 2016, diluted earnings from the electric segment increased by \$0.03 per share as compared to the same period in 2015. There was an increase in the electric gross margin resulting from CPUC approval of fourth-year rate increases effective January 1, 2016, as well as CPUC-approved rate increases generated from advice letter filings approved in 2015 and 2016. There was also a decrease in allocated costs to the electric segment from corporate headquarters as stipulated in the water GRC decision and a decrease in expenses associated with the CPUC-approved solar-initiative program.

Contracted Services Segment:

For the year ended December 31, 2016, diluted earnings from contracted services were \$0.33 per share, compared to \$0.32 per share for the same period in 2015. The increase in earnings was due to higher contracted services revenue resulting from an increase in ongoing operations and maintenance revenues due to the successful resolution of price redeterminations, economic price adjustments and asset transfers, and an overall increase in construction activity and a higher direct construction margin percentage resulting from improved cost efficiencies. The effect of these favorable variances was partially offset by (i) an increase in the allocation of administrative and general expenses from corporate headquarters to the contracted services segment as stipulated in the water GRC, (ii) an increase in ASUS labor and outside services costs, and (iii) a higher effective income tax rate resulting primarily from an increase in state income taxes as compared to the same period in 2015. State income taxes vary among the jurisdictions in which the contracted services business operates. In addition, there was \$3.0 million of retroactive revenues recorded in 2015 related to periods prior to 2015 resulting from the resolution of several price redeterminations, as compared to approximately \$421,000 in retroactive revenues recorded in 2016 related to 2015.

The following discussion and analysis for the years ended December 31, 2016 and 2015 provides information on AWR's consolidated operations and assets and, where necessary, includes specific references to AWR's individual segments and subsidiaries: GSWC and ASUS and its subsidiaries.

Operating RevenuesWater

For the year ended December 31, 2016, revenues from water operations decreased by \$25.6 million to \$302.9 million, compared to \$328.5 million for the year ended December 31, 2015. The 2016 adopted revenues in the CPUC's December 2016 decision on the water general rate case were approximately \$29.8 million lower than the 2015 adopted revenues mainly due to reductions in the revenue requirement for: (i) supply costs caused by lower consumption, (ii) depreciation expense resulting from an updated depreciation study, and (iii) other operating expenses resulting from GSWC's cost containment initiatives. This reduction in water revenues was mostly offset by corresponding decreases in supply costs, depreciation and certain other operating expenses.

The reduction in adopted revenues was partially offset by (i) revenues generated from a water system acquired in October 2015, (ii) higher revenues due to increased consumption as compared to 2015 from customers that are not subject to conservation rates, (iii) revenues from advice letter capital projects approved by the CPUC in 2015, and (iv) the recognition of a portion of the 2015 WRAM revenues that had previously been deferred as required under the accounting guidance for alternative revenue programs such as the WRAM. Under the accounting guidance, GSWC is required to collect its WRAM balances, net of MCBA, within 24 months following the year in which they are recorded. During the fourth quarter of 2015, GSWC did not record water revenues of \$1.4 million related to its 2015 under-collected WRAM balances as it was estimated that this amount would not be fully collected within 24 months following the end of 2015 using the required CPUC amortization guidelines. During 2016, GSWC recognized approximately \$910,000 of the \$1.4 million as water revenue.

Billed water consumption for the year ended December 31, 2016 increased slightly as compared to the same period in 2015. In general, changes in consumption do not have a significant impact on recorded revenues due to the CPUC-approved WRAM accounts in place in all three water regions. GSWC records the difference between what it bills its water customers and that which is authorized by the CPUC in the WRAM accounts as regulatory assets or liabilities.

Electric

For the year ended December 31, 2016, revenues from electric operations were \$35.8 million as compared to \$36.0 million for the year ended December 31, 2015. The decrease was due to the termination in August 2015 of a supply cost surcharge to recover previously incurred energy costs. The decrease in revenues from the termination of this surcharge was approximately \$1.4 million and had no impact on pretax operating income due to an offsetting decrease in supply costs. This decrease in revenue was mostly offset by CPUC-approved fourth-year rate increases effective January 1, 2016, and rate increases generated from advice letter filings approved by the CPUC during 2015 and 2016.

Billed electric usage for the year ended December 31, 2016 decreased by approximately 4% as compared to the same period in 2015. The cold weather and storms experienced in the Big Bear area in late 2016 resulted in less need for snowmaking. In addition, solar and energy efficiency programs offered by BVES have resulted in less customer usage. Due to the CPUC-approved BRRAM, which adjusts base revenues to adopted levels authorized by the CPUC, changes in usage do not have a significant impact on earnings.

Contracted Services

Revenues from contracted services are composed of construction revenues (including renewal and replacements) and management fees for operating and maintaining the water and/or wastewater systems at various military bases. For the year ended December 31, 2016, revenues from contracted services were \$97.4 million as compared to \$94.1 million for 2015. There was an increase in ongoing operations and maintenance management fees due to the successful resolution of price redeterminations, economic price adjustments and asset transfers. There was also an overall increase in construction activity at various military bases as compared to 2015. These increases were partially offset by a decrease in retroactive revenues received in 2016 as compared to 2015. In 2015, there was \$3.0 million of retroactive management fee revenues recorded related to periods prior to 2015 resulting from the resolution of several price redeterminations, as compared to approximately \$421,000 in retroactive revenues recorded in 2016 related to 2015.

Operating Expenses:**Supply Costs**

Total supply costs comprise the largest segment of total operating expenses. Supply costs accounted for 26.8% and 30.4% of total operating expenses for the years ended December 31, 2016 and 2015, respectively. The table below provides the amounts (in thousands) of increases (decreases) and percent changes in water and electric revenues, supply costs and gross margins during the years ended December 31, 2016 and 2015:

| | Year Ended 12/31/2016 | Year Ended 12/31/2015 | \$ CHANGE | % CHANGE |
|---|--------------------------|--------------------------|--------------|-------------|
| WATER OPERATING REVENUES (1) | \$ 302,931 | \$ 328,511 | \$ (25,580) | -7.8% |
| WATER SUPPLY COSTS: | | | | |
| Water purchased (1) | 64,442 | 62,726 | 1,716 | 2.7% |
| Power purchased for pumping (1) | 8,663 | 8,988 | (325) | -3.6% |
| Groundwater production assessment (1) | 14,993 | 13,648 | 1,345 | 9.9% |
| Water supply cost balancing accounts (1) | (14,813) | 3,623 | (18,436) | -508.9% |
| TOTAL WATER SUPPLY COSTS | \$ 73,285 | \$ 88,985 | \$ (15,700) | -17.6% |
| WATER GROSS MARGIN (2) | \$ 229,646 | \$ 239,526 | \$ (9,880) | -4.1% |
| ELECTRIC OPERATING REVENUES (1) | \$ 35,771 | \$ 36,039 | \$ (268) | -0.7% |
| ELECTRIC SUPPLY COSTS: | | | | |
| Power purchased for resale (1) | 10,387 | 10,395 | (8) | -0.1% |
| Electric supply cost balancing accounts (1) | 2,607 | 4,162 | (1,555) | -37.4% |
| TOTAL ELECTRIC SUPPLY COSTS | \$ 12,994 | \$ 14,557 | \$ (1,563) | -10.7% |
| ELECTRIC GROSS MARGIN (2) | \$ 22,777 | \$ 21,482 | \$ 1,295 | 6.0% |

- (1) As reported on AWR's Consolidated Statements of Income, except for supply-cost-balancing accounts. The sums of water and electric supply-cost balancing accounts in the table above are shown on AWR's Consolidated Statements of Income and totaled \$(12.2) million and \$7.8 million for the years ended December 31, 2016 and 2015, respectively. Revenues include surcharges, which increase both revenues and operating expenses by corresponding amounts, thus having no net earnings impact.
- (2) Water and electric gross margins do not include depreciation and amortization, maintenance, administrative and general, property and other taxes, and other operation expenses.

The overall actual percentages for purchased water for the years ended December 31, 2016 and 2015 were 40% and 41%, respectively, as compared to the adopted percentages of 29% and 36%, respectively. The increase in the percentage of purchased water was due to several wells being temporarily out of service during 2016, resulting in an increase in purchased water as compared to pumped water.

Purchased water costs for the year ended December 31, 2016 increased to \$64.4 million as compared to \$62.7 million for the same period in 2015 primarily due to an increase of purchased water in the supply mix as a result of several wells being out of service, as well as an increase in wholesale water costs as compared to the year ended December 31, 2015.

For the year ended December 31, 2016, the cost of power purchased for pumping decreased to \$8.7 million as compared to \$9.0 million for the same period in 2015 primarily due to decreases in pumped water resulting from the increase in purchased water. Groundwater production assessments were \$15.0 million in 2016 as compared to \$13.6 million in 2015 due to higher assessment rates.

The water-supply-cost balancing account decreased \$18.4 million during the year ended December 31, 2016 as compared to the same period in 2015 due to higher incurred supply costs as compared to the authorized supply costs. The authorized supply costs reflect the lower adopted customer usage.

For the years ended December 31, 2016 and 2015, the cost of power purchased for resale to BVES's customers was \$10.4 million. A decrease of 4% in customer usage for the year ended December 31, 2016 as compared to 2015 was offset by an increase in the average price per MWh. The average price per MWh, including fixed costs, increased from \$68.21 per MWh for the year ended December 31, 2015 to \$69.54 per MWh for the same period in 2016. The electric-supply-cost balancing account included in total supply costs decreased by \$1.6 million primarily due to the 2015 termination of supply cost surcharges, which have no impact on pretax operating income.

Other Operation

For the years ended December 31, 2016 and 2015, other operation expenses by business segment consisted of the following amounts (in thousands):

| | Year Ended 12/31/2016 | Year Ended 12/31/2015 | \$ CHANGE | % CHANGE |
|-----------------------|-----------------------------|-----------------------------|--------------|-------------|
| Water Services | \$ 21,649 | \$ 21,961 | \$ (312) | -1.4% |
| Electric Services | 3,122 | 2,931 | 191 | 6.5% |
| Contracted Services | 3,486 | 3,537 | (51) | -1.4% |
| Total other operation | \$ 28,257 | \$ 28,429 | \$ (172) | -0.6% |

Other operation expenses at the water segment decreased by \$312,000 during the year ended December 31, 2016 as compared to the same period in 2015 due primarily to lower conservation and drought-related costs incurred during 2016, partially offset by increases in water treatment costs. Higher conservation and drought-related costs were incurred in 2015 in response to the governor of California's 2015 executive order mandating reductions in water usage. Incremental drought-related costs were being expensed until recovery was approved by the CPUC in February 2017. Accordingly, GSWC reflected the approval during the first quarter of 2017 mostly as a reduction to operation-related expenses.

The increase in other operation expenses at the electric segment was due to outside services costs and labor costs incurred in response to power outages caused by severe winter storms experienced in January 2016.

Administrative and General

For the years ended December 31, 2016 and 2015, administrative and general expenses by business segment, including AWR (parent), consisted of the following amounts (in thousands):

| | Year Ended 12/31/2016 | Year Ended 12/31/2015 | \$ CHANGE | % CHANGE |
|----------------------------------|-----------------------------|-----------------------------|--------------|-------------|
| Water Services | \$ 56,165 | \$ 55,977 | \$ 188 | 0.3% |
| Electric Services | 7,901 | 8,900 | (999) | -11.2% |
| Contracted Services | 16,909 | 14,929 | 1,980 | 13.3% |
| AWR (parent) | 19 | 11 | 8 | 72.7% |
| Total administrative and general | \$ 80,994 | \$ 79,817 | \$ 1,177 | 1.5% |

For the year ended December 31, 2016, administrative and general expenses at the water segment increased overall due, in large part, to an increase of approximately \$4.0 million in legal and other outside service costs incurred on condemnation-related matters. The increase in these outside services was mostly offset by decreases in pension costs, transportation-related expenses, and a higher allocation of corporate headquarters costs to the contracted services segment. The decreases in these expenses were also reflected in the adopted water revenue requirement.

For the year ended December 31, 2016, administrative and general expenses for the electric segment decreased by \$1.0 million as compared to the same period in 2015 due primarily to decreases in costs associated with the energy-efficiency and solar-initiative programs approved by the CPUC. The costs of these programs have been included in customer rates equally over the rate cycle. The spending of such funds had increased in 2015 due to the delay in receiving the final decision in November 2014 of the BVES rate case, which authorized these programs. There was also a lower allocation of administrative and general expenses to the electric segment from the corporate headquarters in 2016, as stipulated in the decision of the water general rate case.

For the year ended December 31, 2016, administrative and general expenses for contracted services increased by \$2.0 million due to (i) an increase of \$1.3 million in the allocation of administrative and general expenses from GSWC to the contracted services segment as stipulated in the final decision on the water general rate case, and (ii) increases in ASUS labor-related costs.

Depreciation and Amortization

For the years ended December 31, 2016 and 2015, depreciation and amortization expense by segment consisted of the following amounts (in thousands):

| | Year Ended 12/31/2016 | Year Ended 12/31/2015 | \$ CHANGE | % CHANGE |
|-------------------------------------|-----------------------------|-----------------------------|--------------|-------------|
| Water Services | \$ 35,777 | \$ 39,190 | \$ (3,413) | -8.7% |
| Electric Services | 2,027 | 1,703 | 324 | 19.0% |
| Contracted Services | 1,046 | 1,140 | (94) | -8.2% |
| Total depreciation and amortization | \$ 38,850 | \$ 42,033 | \$ (3,183) | -7.6% |

For the year ended December 31, 2016, depreciation and amortization expense for the water segment decreased by \$3.4 million due to lower composite depreciation rates used in 2016 resulting from an updated depreciation study in the water general rate case. This decrease was partially offset by depreciation on additions to utility plant during 2016. The lower net depreciation expense has been reflected in the newly adopted water revenue requirement.

For the year ended December 31, 2016, depreciation and amortization expense for the electric segment increased primarily due to the impact of capital additions.

Maintenance

For the years ended December 31, 2016 and 2015, maintenance expense by segment consisted of the following amounts (in thousands):

| | Year Ended 12/31/2016 | Year Ended 12/31/2015 | \$ CHANGE | % CHANGE |
|---------------------|-----------------------------|-----------------------------|--------------|-------------|
| Water Services | \$ 13,783 | \$ 13,935 | \$ (152) | -1.1% |
| Electric Services | 736 | 758 | (22) | -2.9% |
| Contracted Services | 1,951 | 2,192 | (241) | -11.0% |
| Total maintenance | \$ 16,470 | \$ 16,885 | \$ (415) | -2.5% |

Maintenance expense for contracted services decreased due primarily to (i) a decrease in labor costs associated with maintenance-related activities, and (ii) a decrease in outside services costs.

Property and Other Taxes

For the years ended December 31, 2016 and 2015, property and other taxes by segment, consisted of the following amounts (in thousands):

| | Year Ended | | \$ | % |
|--------------------------------|------------|------------|--------|-------|
| | 12/31/2016 | 12/31/2015 | | |
| Water Services | \$ 14,362 | \$ 14,250 | \$ 112 | 0.8% |
| Electric Services | 1,082 | 994 | 88 | 8.9% |
| Contracted Services | 1,357 | 1,392 | (35) | -2.5% |
| Total property and other taxes | \$ 16,801 | \$ 16,636 | \$ 165 | 1.0% |

ASUS Construction

For the year ended December 31, 2016, construction expenses for contracted services were \$53.7 million, increasing by \$910,000 compared to the same period in 2015 due to increased construction activity as compared to 2015.

Interest Expense

For the years ended December 31, 2016 and 2015, interest expense by segment, including AWR (parent), consisted of the following amounts (in thousands):

| | Year Ended | | \$ | % |
|------------------------|------------|------------|--------|--------|
| | 12/31/2016 | 12/31/2015 | | |
| Water Services | \$ 20,430 | \$ 19,898 | \$ 532 | 2.7% |
| Electric Services | 1,352 | 1,100 | 252 | 22.9% |
| Contracted Services | 76 | 33 | 43 | 130.3% |
| AWR (parent) | 134 | 57 | 77 | 135.1% |
| Total interest expense | \$ 21,992 | \$ 21,088 | \$ 904 | 4.3% |

Overall, interest expense for the year ended December 31, 2016 increased by \$904,000 as compared to the same period in 2015 due, in part, to capitalized interest during the first quarter of 2015 at the water segment resulting from the recording of an allowance for funds used during construction in connection with the CPUC's approval of a filing for advice letter capital projects. There was no similar item during 2016. There was also an increase in interest expense due to higher borrowings on the revolving credit facility during 2016.

Interest Income

For the years ended December 31, 2016 and 2015, interest income by business segment, including AWR (parent), consisted of the following amounts (in thousands):

| | Year Ended | | \$ | % |
|-----------------------|------------|------------|--------|---------|
| | 12/31/2016 | 12/31/2015 | | |
| Water Services | \$ 734 | \$ 430 | \$ 304 | 70.7% |
| Electric Services | 15 | 10 | 5 | 50.0% |
| Contracted Services | 8 | 7 | 1 | 14.3% |
| AWR (parent) | — | 11 | (11) | -100.0% |
| Total interest income | \$ 757 | \$ 458 | \$ 299 | 65.3% |

Interest income increased by \$299,000 for the year ended December 31, 2016 as compared to the same period in 2015 due primarily to higher interest accrued on regulatory assets as compared to the same period in 2015.

Other, net

For the year ended December 31, 2016, other income increased by \$641,000 primarily due to higher gains recorded on investments held for a retirement benefit plan resulting from market conditions as compared to 2015.

Income Tax Expense

For the years ended December 31, 2016 and 2015, income tax expense by segment, including AWR (parent), consisted of the following amounts (in thousands):

| | Year Ended 12/31/2016 | Year Ended 12/31/2015 | \$ CHANGE | % CHANGE |
|--------------------------|-----------------------------|-----------------------------|--------------|-------------|
| Water Services | \$ 25,894 | \$ 30,302 | \$ (4,408) | -14.5% |
| Electric Services | 2,715 | 2,170 | 545 | 25.1% |
| Contracted Services | 6,672 | 6,069 | 603 | 9.9% |
| AWR (parent) | (546) | (810) | 264 | -32.6% |
| Total income tax expense | \$ 34,735 | \$ 37,731 | \$ (2,996) | -7.9% |

Consolidated income tax expense for the year ended December 31, 2016 decreased by \$3.0 million due primarily to a decrease in pretax income as well as a decrease in the overall ETR. AWR's ETR was 36.8% for the year ended December 31, 2016 as compared to 38.4% for the same period in 2015. The ETR for GSWC was 37.9% for 2016 as compared to 40.6% for 2015 due primarily to differences between book and taxable income that are treated as flow-through adjustments in accordance with regulatory requirements, and permanent differences such as deductions related to production activities. The decrease in GSWC's ETR was partially offset by an increase in the ETR at the contracted services segment, which was due mostly to higher state taxes, which vary among the jurisdictions in which it operates.

Critical Accounting Policies and Estimates

Critical accounting policies and estimates are those that are important to the portrayal of AWR's financial condition, results of operations and cash flows, and require the most difficult, subjective or complex judgments of AWR's management. The need to make estimates about the effect of items that are uncertain is what makes these judgments difficult, subjective and/or complex. Management makes subjective judgments about the accounting and regulatory treatment of many items. The following are accounting policies that are critical to the financial statements of AWR. For more information regarding the significant accounting policies of Registrant, see Note 1 of "Notes to Financial Statements" included in Part II, Item 8, in Financial Statements and Supplementary Data.

Accounting for Rate Regulation — Because Registrant operates extensively in a regulated business, it is subject to the authoritative guidance for accounting for the effects of certain types of regulation. Application of this guidance requires accounting for certain transactions in accordance with regulations adopted by the regulatory commissions of the states in which rate-regulated operations are conducted. Utility companies defer costs and credits on the balance sheet as regulatory assets and liabilities when it is probable that those costs and credits will be recognized in the ratemaking process in a period different from the period in which they would have been reflected in income by an unregulated company. These deferred regulatory assets and liabilities are then reflected in the income statement in the period in which the same amounts are reflected in the rates charged for service.

Regulation and the effects of regulatory accounting have the most significant impact on the financial statements of Registrant. When GSWC files for adjustments to rates, the capital assets, operating costs and other matters are subject to review, and disallowances may occur. In the event that a portion of the Registrant's operations is no longer subject to the accounting guidance for the effects of certain types of regulation, Registrant is required to write off related regulatory assets that are not specifically recoverable and determine if other assets might be impaired. If the CPUC determines that a portion of the Registrant's assets are not recoverable in customer rates, Registrant is required to determine if it has suffered an asset impairment that would require a write-down in the asset valuation. At December 31, 2017, the consolidated balance sheet included net regulatory assets of approximately \$2.0 million. Management continually evaluates the anticipated recovery, settlement or refund of regulatory assets, liabilities, and revenues subject to refund and will provide for allowances and/or reserves as necessary. In the event that Registrant's assessment as to the probability of the inclusion in the ratemaking process is incorrect, the associated regulatory asset or liability will be adjusted to reflect the change in assessment or the impact of

regulatory approval of rates. Reviews by the CPUC may also result in additional regulatory liabilities to refund previously collected revenues to customers if the CPUC disallows costs included in the ratemaking process.

Registrant also reviews its utility plant in service for possible impairment in accordance with accounting guidance for regulated entities for abandonments and disallowances of plant costs.

Revenue Recognition — Effective January 1, 2018, GSWC will adopt Accounting Standard Update 2014-09, *Revenue from Contracts with Customers (Topic 606)* ("ASU 2014-09") issued by the Financial Accounting Standards Board. The adoption of this revenue guidance will not have a material impact on how Registrant recognizes revenue.

GSWC records water and electric utility operating revenues when the service is provided to customers. Operating revenues include unbilled revenues that are earned (i.e., the service has been provided) but not billed by the end of each accounting period. Unbilled revenues are calculated based on the number of days and total usage from each customer's most recent billing record that was billed prior to the end of the accounting period and is used to estimate unbilled consumption as of the year-end reporting period. Unbilled revenues are recorded for both monthly and bi-monthly customers.

The CPUC granted GSWC the authority to implement revenue decoupling mechanisms through the adoption of the WRAM and the BRRAM. With the adoption of these alternative revenue programs, GSWC adjusts revenues in the WRAM and BRRAM for the difference between what is billed to its regulated customers and that which is authorized by the CPUC. Alternative revenue programs such as the WRAM and BRRAM are outside the scope of ASU 2014-09.

As required by the accounting guidance for alternative revenue programs, GSWC is required to collect its WRAM and BRRAM balances within 24 months following the year in which they are recorded. The CPUC has set the recovery period for under-collected balances that are up to 15% of adopted annual revenues at 18 months or less. For net WRAM under-collected balances greater than 15%, the recovery period is 19 to 36 months. As a result of the accounting guidance and CPUC-adopted recovery periods, Registrant must estimate if any WRAM and BRRAM revenues will be collected beyond the 24-month requirement, which can affect the timing of when such revenues are recognized.

Revenues for ASUS's operations and maintenance contracts are recognized when services have been rendered to the U.S. government pursuant to 50-year contracts. Revenues from construction activities are recognized based on either the percentage-of-completion or cost-plus methods of accounting. In accordance with GAAP, revenue recognition under these methods requires management to estimate the progress toward completion on a contract in terms of efforts, such as costs incurred. This approach is used because management considers it to be the best available measure of progress on these contracts. Changes in job performance, job conditions, change orders and estimated profitability, including those arising from any contract penalty provisions, and final contract settlements may result in revisions to costs and income and are recognized in the period in which the revisions are determined. Unbilled receivables from the U.S. government represent amounts to be billed for construction work completed and/or for services rendered pursuant to the 50-year contracts with the U.S. government, which are not presently billable but which will be billed under the terms of the contracts.

Income Taxes — Registrant's income tax calculations require estimates due principally to the regulated nature of the operations of GSWC, the multiple states in which Registrant operates, and potential future tax rate changes. Registrant uses the asset and liability method of accounting for income taxes under which deferred tax assets and liabilities are recognized for future tax consequences attributable to differences between the financial statement carrying amounts of existing assets and liabilities and their respective tax bases. Deferred tax assets and liabilities are measured using enacted tax rates expected to apply to taxable income in the years in which these temporary differences are expected to be recovered or settled. As of December 31, 2017, Registrant's deferred tax assets and liabilities have been remeasured to reflect the reduction in the federal corporate tax rate from 35% to 21% as signed into law on December 22, 2017. Changes in regulatory treatment, or significant changes in tax-related estimates, assumptions or law, could have a material impact on the financial position and results of operations of Registrant.

As a regulated utility, GSWC treats certain temporary differences as flow-through adjustments in computing its income tax expense consistent with the income tax approach approved by the CPUC for ratemaking purposes. Flow-through adjustments increase or decrease tax expense in one period, with an offsetting decrease or increase occurring in another period. Giving effect to these temporary differences as flow-through adjustments typically results in a greater variance between the effective tax rate and the statutory federal income tax rate in any given period than would otherwise exist if GSWC were not required to account for its income taxes as a regulated enterprise. As of December 31, 2017, Registrant's total amount of unrecognized tax benefits was zero.

Pension Benefits — Registrant’s pension benefit obligations and related costs are calculated using actuarial concepts within the framework of accounting guidance for employers’ accounting for pensions and post-retirement benefits other than pensions. Two critical assumptions, the discount rate and the expected return on plan assets, are important elements of expense and/or liability measurement. We evaluate these critical assumptions annually. Other assumptions include employee demographic factors such as retirement patterns, mortality, turnover and rate of compensation increase. The discount rate enables Registrant to state expected future cash payments for benefits as a present value on the measurement date. The guideline for setting this rate is a high-quality, long-term corporate bond rate. Registrant’s discount rates were determined by considering the average of pension yield curves constructed using a large population of high-quality corporate bonds. The resulting discount rates reflect the matching of plan liability cash flows to the yield curves. A lower discount rate increases the present value of benefit obligations and increases periodic pension expense. Conversely, a higher discount rate decreases the present value of benefit obligations and decreases periodic pension expense. To determine the expected long-term rate of return on the plan assets, Registrant considers the current and expected asset allocation, as well as historical and expected returns on each plan asset class. A lower expected rate of return on plan assets will increase pension expense. The long-term expected return on plan assets was 6.50% in 2017 and 7.00% in 2016 for the pension plan.

For the pension plan obligation, Registrant decreased the discount rate to 3.76% as of December 31, 2017 from 4.44% as of December 31, 2016 to reflect market interest-rate conditions at December 31, 2017. A hypothetical 25-basis point further decrease in the assumed discount rate would have increased total net periodic pension expense for 2017 by approximately \$742,000, or 18.0%, and would have increased the projected benefit obligation (“PBO”) and accumulated benefit obligation (“ABO”) at December 31, 2017 by a total of \$8.0 million, or 3.9%. A 25-basis point further decrease in the long-term return on pension plan asset assumption would have increased 2017 pension cost by approximately \$373,000, or 9.1%.

In addition, changes in the fair value of plan assets will impact future pension cost and the Plan’s funded status. Volatile market conditions can affect the value of AWR’s trust established to fund its future long-term pension benefits. Any reductions in the value of plan assets will result in increased future expense, an increase in the underfunded position and increased future contributions.

Previous CPUC decisions in the water and electric general rate cases have authorized GSWC to continue using a two-way balancing account to track differences between the forecasted annual pension expenses adopted in rates and the actual annual expense to be recorded by GSWC in accordance with the accounting guidance for pension costs. As of December 31, 2017, GSWC has a \$1.7 million over-collection in the two-way pension balancing accounts, consisting of a \$588,000 over-collection related to the general office and water regions, and a \$1.1 million over-collection related to BVES.

Funding requirements for qualified defined benefit pension plans are determined by government regulations. In establishing the contribution amount, Registrant has considered the potential impact of funding-rule changes under the Pension Protection Act of 2006. Registrant contributes the minimum required contribution as determined by government regulations or the forecasted annual pension cost authorized by the CPUC and included in customer rates, whichever is higher. In accordance with this funding policy, for 2018 the pension contribution is expected to be approximately \$6.1 million. Any differences between the forecasted annual pension costs in rates and the actual pension costs are included in the two-way pension balancing accounts.

Additionally, our pension plan liabilities are sensitive to changes in interest rates. As interest rates decrease, thereby reducing returns, our liabilities increase, potentially increasing benefit expense and funding requirements. In addition, market factors can affect assumptions we use in determining funding requirements with respect to our pension plan. For example, a relatively modest change in our assumptions regarding discount rates can materially affect our calculation of funding requirements. To the extent that market data compels us to reduce the discount rate used in our assumptions, our benefit obligations could materially increase.

Changes in demographics, including increased numbers of retirees or increases in life expectancy assumptions may also increase the funding requirements of our obligations related to the pension and other postretirement benefit plans. Mortality assumptions are a critical component of benefit obligation amounts and a key factor in determining the expected length of time for annuity payments. Assuming no changes in actuarial assumptions or plan amendments, the costs over the long term are expected to decrease due to the closure of Registrant’s defined benefit pension plan to new employees as of January 1, 2011. Employees hired or rehired after December 31, 2010 are eligible to participate in a defined contribution plan.

Liquidity and Capital Resources

AWR

Registrant's regulated business is capital intensive and requires considerable capital resources. A portion of these capital resources is provided by internally generated cash flows from operations. AWR anticipates that interest expense will increase in future periods due to the need for additional external capital to fund its construction program, and as market interest rates increase. AWR believes that costs associated with capital used to fund construction at GSWC will continue to be recovered through water and electric rates charged to customers.

AWR funds its operating expenses and pays dividends on its outstanding Common Shares primarily through dividends from its wholly owned subsidiaries. The ability of GSWC to pay dividends to AWR is restricted by California law. Under these restrictions, approximately \$232.2 million was available for GSWC to pay dividends to AWR on December 31, 2017. Approximately \$62.0 million was available for ASUS to pay dividends to AWR as of December 31, 2017 to the extent that the subsidiaries of ASUS are able to pay dividends in that amount to ASUS under applicable state laws.

When necessary, Registrant obtains funds from external sources in the capital markets and through bank borrowings. Access to external financing on reasonable terms depends on the credit ratings of AWR and GSWC and current business conditions, including that of the water utility industry in general, as well as conditions in the debt and equity capital markets. AWR has access to a syndicated credit facility which expires in May 2018. Management expects to extend this facility prior to its expiration date. AWR borrows under this facility and provides funds to its subsidiaries, GSWC and ASUS, in support of their operations. Any amounts owed to AWR for borrowings under this facility are included in inter-company payables on GSWC's balance sheet. The interest rate charged to GSWC and ASUS is sufficient to cover AWR's interest cost under the credit facility. As of December 31, 2017, there were \$59.0 million of outstanding borrowings under this facility and \$6.3 million of letters of credit outstanding. As of December 31, 2017, AWR had \$84.7 million available to borrow under the credit facility.

In May 2017, Standard and Poor's Global Ratings ("S&P") reaffirmed an A+ credit rating with a stable outlook on both AWR and GSWC. S&P's debt ratings range from AAA (highest possible) to D (obligation is in default). In December 2017, Moody's Investors Service ("Moody's") affirmed its A2 rating with a revised rating outlook from stable to positive for GSWC. Securities ratings are not recommendations to buy, sell or hold a security and are subject to change or withdrawal at any time by the rating agencies. Registrant believes that AWR's sound capital structure and A+ credit rating, combined with its financial discipline, will enable AWR to access the debt and equity markets. However, unpredictable financial market conditions in the future may limit its access or impact the timing of when to access the market, in which case, Registrant may choose to temporarily reduce its capital spending. If needed, GSWC may issue long-term debt in the near future, depending on market conditions. It is anticipated that the proceeds from any such debt issuance would be used to pay down short-term borrowings and fund a portion of capital expenditures.

AWR's ability to pay cash dividends on its Common Shares outstanding depends primarily upon cash flows from its subsidiaries. AWR intends to continue paying quarterly cash dividends in the future, on or about March 1, June 1, September 1 and December 1, subject to earnings and financial conditions, regulatory requirements and such other factors as the Board of Directors may deem relevant. Registrant has paid dividends on its Common Shares for over 80 consecutive years. On January 30, 2018, AWR's Board of Directors approved a first quarter dividend of \$0.255 per share on AWR's Common Shares. Dividends on the Common Shares will be paid on March 1, 2018 to shareholders of record at the close of business on February 15, 2018.

Cash Flows from Operating Activities:

Cash flows from operating activities have generally provided sufficient cash to fund operating requirements, including a portion of construction expenditures at GSWC, construction expenses at ASUS, and pay dividends. Registrant's future cash flows from operating activities are expected to be affected by a number of factors, including utility regulation; changes in tax law; maintenance expenses; inflation; compliance with environmental, health and safety standards; production costs; customer growth; per customer usage of water and electricity; weather and seasonality; conservation efforts; compliance with local governmental requirements, including mandatory restrictions on water use; and required cash contributions to pension and post-retirement plans. Future cash flows from contracted services subsidiaries will depend on new business activities, existing operations, the construction of new and/or replacement infrastructure at military bases, timely economic price and equitable

adjustment of prices and timely collection of payments from the U.S. government and other prime contractors operating at the military bases.

As a result of the Tax Cuts and Jobs Act, the lower federal tax rate and the elimination of bonus depreciation is expected to reduce Registrant's cash flows from operating activities, and result in higher cost of capital from an increased need to raise debt and/or equity.

ASUS funds its operating expenses primarily through internal operating sources, which include U.S. government funding under 50-year contracts for operations and maintenance costs and construction activities, as well as investments by, or loans from, AWR. ASUS, in turn, provides funding to its subsidiaries. ASUS's subsidiaries may also from time to time provide funding to ASUS or its subsidiaries.

Cash flows from operating activities are primarily generated by net income, adjusted for non-cash expenses such as depreciation and amortization, and deferred income taxes. Cash generated by operations varies during the year. Net cash provided by operating activities was \$144.6 million for the year ended December 31, 2017 as compared to \$96.9 million for the year ended December 31, 2016, and \$95.1 million for the year ended December 31, 2015. There was an increase in operating cash flow for GSWC due to various CPUC-approved surcharges implemented during 2017 to recover previously incurred costs, as well as income tax refunds received in 2017. The increase in operating cash flow was also due to the timing of billing of and cash receipts for construction work at military bases during 2017. The billings (and cash receipts) for this construction work generally occur at completion of the work or in accordance with a billing schedule contractually agreed to with the U.S. government and/or other prime contractors. Thus, cash flow from construction-related activities may fluctuate from period to period with such fluctuations representing timing differences of when the work is being performed and when the cash is received for payment of the work. Changes in customer accounts receivable were due to higher balances outstanding resulting from CPUC-approved rate increases and surcharges. The timing of cash receipts and disbursements related to other working capital items also affected the change in net cash provided by operating activities.

The increase in operating cash flow during 2016 as compared to 2015 was due to surcharges collected during 2016 for the 2015 WRAM under-collection, as well as lower WRAM under-collections recorded during 2016. This was partially offset by a decrease in cash generated by ASUS due to the timing of billing and cash receipts for construction work at military bases, as well as retroactive revenues collected during the year ended December 31, 2015 as compared to 2016. The timing of cash receipts and disbursements related to other working capital items also affected the change in net cash provided by operating activities.

Cash Flows from Investing Activities:

Net cash used in investing activities was \$80.0 million for the year ended December 31, 2017 as compared to \$131.2 million used in 2016 and \$90.1 million used in 2015. Cash paid for capital expenditures in 2017 was partially offset by \$34.3 million in cash proceeds generated from the sale of GSWC's Ojai water system. Cash used for other investments consists primarily of cash invested in a trust for a retirement benefit plan.

The capital expenditures incurred in 2016 were higher than in 2015, which was consistent with GSWC's capital investment program approved in the water general rate case.

Registrant invests capital to provide essential services to its regulated customer base, and has an opportunity to earn a fair rate of return on investments in infrastructure. Registrant's infrastructure investment plan consists of both infrastructure renewal programs, where infrastructure is replaced, as needed, and major capital investment projects, where new water treatment and delivery facilities are constructed. GSWC may also be required from time to time to relocate existing infrastructure in order to accommodate local infrastructure improvement projects. Projected capital expenditures and other investments are subject to periodic review and revision.

Cash Flows from Financing Activities:

Registrant's financing activities include primarily: (i) the sale proceeds from the issuance of Common Shares and stock option exercises and the repurchase of Common Shares; (ii) the issuance and repayment of long-term debt and notes payable to banks; and (iii) the payment of dividends on Common Shares. In order to finance new infrastructure, Registrant also receives customer advances (net of refunds) for, and contributions in aid of construction. Short-term borrowings are used to fund capital expenditures until long-term financing is arranged.

Net cash used in financing activities was \$64.7 million for the year ended December 31, 2017 as compared to cash provided from financing activities of \$30.3 million and cash used of \$76.6 million for the same periods in 2016 and 2015, respectively. This decrease in cash from financing activities during 2017 was due to the use of the Ojai sale proceeds, as well as cash generated from operating activities, to repay a portion of short-term borrowings from Registrant's revolving credit facility during 2017.

The increase in cash provided by financing activities in 2016 as compared to 2015 was due to an increase in short-term borrowings under Registrant's revolving credit line during 2016. The borrowings were used to fund operations and a portion of capital expenditures during 2016. In addition, cash used in financing activities during 2015 was primarily related to the repurchase of AWR Common Shares as part of a stock repurchase program, which was completed in 2015.

GSWC

GSWC funds its operating expenses, payments on its debt, and dividends on its outstanding common shares and a portion of its construction expenditures through internal sources. Internal sources of cash flow are provided primarily by retention of a portion of earnings from operating activities. Internal cash generation is influenced by factors such as weather patterns, conservation efforts, environmental regulation, litigation, deferred taxes, changes in supply costs and regulatory decisions affecting GSWC's ability to recover these supply costs, timing of rate relief, increases in maintenance expenses and capital expenditures, surcharges authorized by the CPUC to enable GSWC to recover expenses previously incurred from customers and CPUC requirements to refund amounts previously charged to customers.

GSWC may, at times, utilize external sources, including equity investments and short-term borrowings from AWR, and long-term debt to help fund a portion of its construction expenditures. In addition, GSWC receives advances and contributions from customers, home builders and real estate developers to fund construction necessary to extend service to new areas. Advances for construction are generally refundable at a rate of 2.5% in equal annual installments over 40 years. Amounts which are no longer subject to refund are reclassified to contributions in aid of construction. Utility plant funded by advances and contributions is excluded from rate base. Generally, GSWC amortizes contributions in aid of construction at the same composite rate of depreciation for the related property.

As is often the case with public utilities, GSWC's current liabilities may at times exceed its current assets. Management believes that internally generated funds along with the proceeds from the issuance of long-term debt, borrowings from AWR and common share issuances to AWR will be adequate to provide sufficient capital to enable GSWC to maintain normal operations and to meet its capital and financing requirements pending recovery of costs in rates.

Cash Flows from Operating Activities:

Net cash provided by operating activities was \$129.6 million for the year ended December 31, 2017 as compared to \$101.3 million and \$97.5 million for the same periods in 2016 and 2015, respectively. There was an increase in operating cash flow for GSWC due to various CPUC-approved surcharges implemented during 2017 to recover previously incurred costs, as well as income tax refunds received in 2017. Changes in customer accounts receivable were due to higher balances outstanding resulting from CPUC-approved rate increases and surcharges. The timing of cash receipts and disbursements related to other working capital items also affected net cash provided by operating activities.

The increase in cash from operations in 2016 as compared to 2015 was due to surcharges collected during 2016 for the 2015 WRAM under-collection, as well as lower WRAM under-collections recorded during 2016. The timing of cash receipts and disbursements related to working capital items affected the change in net cash provided by operating activities.

Cash Flows from Investing Activities:

Net cash used in investing activities was \$77.4 million for the year ended December 31, 2017 as compared to \$129.3 million and \$89.0 million for the same periods in 2016 and 2015, respectively. Cash used for capital expenditures in 2017 was \$110.5 million, which was partially offset by cash proceeds received from the sale of GSWC's Ojai water system.

During the years ended December 31, 2017, 2016 and 2015, GSWC had capital expenditures of \$110.5 million, \$127.9 million and \$86.1 million, respectively. Capital expenditures incurred in 2017, 2016 and 2015 were consistent with GSWC's capital investment program. GSWC expects 2018 company-funded capital expenditures to be between \$110 and \$120 million.

GSWC has an interest-bearing note from AWR which expires in May 2018, whereby AWR may borrow up to \$40.0 million for working capital purposes. AWR expects to renew this note prior to May 2018. During 2015, AWR borrowed \$20.7 million from GSWC, all of which was repaid during 2015.

Cash Flows from Financing Activities:

Net cash used for financing activities was \$52.2 million for 2017 as compared to net cash provided of \$25.7 million and net cash used of \$50.0 million for 2016 and 2015, respectively. The decrease in cash from financing activities during 2017 was due to the use of the Ojai sale proceeds, as well as cash generated from operating activities, to repay a portion of inter-company short-term borrowings.

The increase in cash provided by financing activities in 2016 as compared to 2015 was due to proceeds from inter-company borrowings from AWR of \$49.5 million to fund operations and a portion of capital expenditures. There was also an increase in cash receipts from advances for, and contributions in aid of, construction as compared to 2015. In addition, GSWC paid higher dividends to AWR parent during 2015 to adjust GSWC's capital structure to the CPUC's adopted capital structure. These increases in cash used in financing activities were partially offset by proceeds from inter-company borrowings from AWR of \$12.0 million in 2015.

Contractual Obligations, Commitments and Off-Balance-Sheet Arrangements

Registrant has various contractual obligations which are recorded as liabilities in the consolidated financial statements. Other items, such as certain purchase commitments and operating leases are not recognized as liabilities in the consolidated financial statements, but are required to be disclosed. In addition to contractual maturities, Registrant has certain debt instruments that contain annual sinking funds or other principal payments. Registrant believes that it will be able to refinance debt instruments at their maturity through public issuance, or private placement, of debt or equity. Annual payments to service debt are generally made from cash flows from operations.

The following table reflects Registrant's contractual obligations and commitments to make future payments pursuant to contracts as of December 31, 2017. All obligations and commitments are obligations and commitments of GSWC unless otherwise noted.

| (\$ in thousands) | Payments/Commitments Due by Period (1) | | | | |
|---------------------------------------|--|------------------|-----------|-----------|---------------|
| | Total | Less than 1 Year | 1-3 Years | 4-5 Years | After 5 Years |
| Notes/Debentures (2) | \$ 187,000 | \$ — | \$ — | \$ — | \$ 187,000 |
| Private Placement Notes (3) | 123,000 | — | 40,000 | — | 83,000 |
| Tax-Exempt Obligations (4) | 11,502 | 143 | 303 | 346 | 10,710 |
| Other Debt Instruments (5) | 3,763 | 181 | 363 | 409 | 2,810 |
| Total AWR Long-Term Debt | \$ 325,265 | \$ 324 | 40,666 | \$ 755 | \$ 283,520 |
| Interest on Long-Term Debt (6) | \$ 275,825 | \$ 21,601 | \$ 38,296 | \$ 37,726 | \$ 178,202 |
| Advances for Construction (7) | 70,750 | 3,286 | 6,572 | 6,566 | 54,326 |
| Renewable Energy Credit Agreement (8) | 3,168 | 409 | 901 | 1,239 | 619 |
| Purchased Power Contracts (9) | 9,562 | 4,993 | 4,569 | — | — |
| Capital Expenditures (10) | 36,412 | 36,412 | — | — | — |
| Water Purchase Agreements (11) | 4,794 | 400 | 801 | 801 | 2,792 |
| Operating Leases (12) | 7,951 | 2,250 | 3,651 | 1,711 | 339 |
| Employer Contributions (13) | 16,142 | 6,100 | 6,899 | 3,143 | — |
| SUB-TOTAL | \$ 424,604 | \$ 75,451 | \$ 61,689 | \$ 51,186 | \$ 236,278 |
| Other Commitments (14) | 70,303 | | | | |
| TOTAL | \$ 820,172 | | | | |

(1) Excludes dividends and facility fees.

- (2) The notes and debentures have been issued by GSWC under an Indenture dated September 1, 1993, as amended in December 2008. The notes and debentures do not contain any financial covenants that Registrant believes to be material or any cross-default provisions.
- (3) GSWC issued private placement notes in 1991 in the amount of \$28 million pursuant to the terms of note purchase agreements with substantially similar terms. These agreements contain restrictions on the payment of dividends, minimum interest coverage requirements, a maximum debt-to-capitalization ratio and a negative pledge. Pursuant to the terms of these agreements, GSWC must maintain a minimum interest coverage ratio of two times interest expense. In addition, two senior notes in the amount of \$40 million each were issued by GSWC in October 2005 and in March 2009 to CoBank, ACB. A senior note in the amount of \$15 million was issued to The Prudential Insurance Company of America in December 2014. Under the terms of these senior notes, GSWC may not incur any additional debt or pay any distributions to its shareholders if, after giving effect thereto, it would have a debt to capitalization ratio in excess of 0.6667-to-1 or a debt to Earnings Before Interest, Taxes, Depreciation and Amortization ratio of more than 8-to-1. GSWC is in compliance with these covenant provisions as of December 31, 2017. GSWC does not currently have any outstanding mortgages or other liens on indebtedness on its properties.
- (4) Consists of obligations at GSWC related to (i) a loan agreement supporting \$7.7 million in outstanding debt issued by the California Pollution Control Financing Authority, and (ii) \$3.8 million of obligations with respect to GSWC's 500 acre-foot entitlement to water from the State Water Project ("SWP"). These obligations do not contain any financial covenants believed to be material to Registrant or any cross-default provisions. In regard to its SWP entitlement, GSWC has entered into agreements with various developers for a portion of its 500 acre-foot entitlement to water from the SWP.
- (5) Consists of (i) \$3.7 million outstanding representing the debt portion of funds received under the American Recovery and Reinvestment Act for reimbursements of capital costs related to the installation of meters for conversion of non-metered service to metered service in GSWC's Arden-Cordova District, and (ii) \$18,000 outstanding under a variable rate obligation of GSWC incurred to fund construction of water delivery facilities with the Three Valleys Municipal Water District. These obligations do not contain any financial covenants believed to be material to Registrant or any cross-default provisions.
- (6) Consists of expected interest expense payments based on the assumption that GSWC's long-term debt remains outstanding until maturity. Current interest rates were used to estimate expected interest expense payments on variable-rate long-term debt.
- (7) Advances for construction represent annual contract refunds by GSWC to developers for the cost of water systems paid for by the developers. The advances are generally refundable in equal annual installments over 40-year periods.
- (8) Consists of an agreement by GSWC to purchase a total of 582,000 renewable energy credits through 2023. These renewable energy credits are used by GSWC's electric division to meet California's renewables portfolio standard.
- (9) Consists of a fixed-cost purchased power contract effective January 1, 2015 between BVES and Shell Energy North America (US), L.P. and EDF Trading North America, LLC.
- (10) Consists of capital expenditures estimated to be required under signed contracts at GSWC.
- (11) Water purchase agreements consist of (i) a remaining amount of \$2.4 million under an agreement expiring in 2028 to lease water rights from a third party, and (ii) an aggregate amount of \$2.4 million of other water purchase commitments with other third parties which expire through 2038.
- (12) Reflects future minimum payments under noncancelable operating leases for both GSWC and ASUS.
- (13) Consists of expected contributions to Registrant's defined benefit pension plan for the years 2018 through 2021. Contribution to the pension plan are expected to be the higher of the minimum required contribution under the Employee Retirement Income Security Act ("ERISA") or the amounts that are recovered in customer rates and approved by the CPUC. These amounts are estimates and are subject to change based on, among other things, the limits established for federal tax deductibility (pension plan) and the significant impact that returns on plan assets and changes in discount rates have on such amounts.
- (14) Other commitments consist primarily of (i) a \$150 million syndicated revolving credit facility, of which \$59.0 million was outstanding as of December 31, 2017, (ii) a \$5.0 million asset retirement obligation of GSWC that reflects the retirement of wells by GSWC, which by law need to be properly capped at the time of removal, (iii) an irrevocable letter of credit in the amount of \$340,000 for the deductible in Registrant's business automobile insurance policy, (iv) an irrevocable letter of credit issued on behalf of GSWC in the amount of \$585,000 as security for the purchase of power by BVES under an energy scheduling agreement with Automated Power Exchange, (v) \$5.4 million in letters of credit issued on behalf of GSWC related to funds received for reimbursement of capital costs related to the installation of meters for conversion of non-metered service to metered service in GSWC's Arden-Cordova district, and (vi) a \$15,000 irrevocable letter of credit issued on behalf of GSWC pursuant to a franchise agreement with the City of Rancho Cordova. All of the letters of credit are issued pursuant to the syndicated revolving credit facility. The syndicated revolving credit facility contains restrictions on prepayments, disposition of property, mergers, liens and negative pledges, indebtedness and guaranty obligations, transactions with affiliates, minimum interest coverage requirements, a maximum debt-to-capitalization ratio, and a minimum debt rating. Pursuant to the credit agreement, AWR must maintain a minimum interest coverage ratio of 3.25 times interest expense, a maximum total funded debt ratio of 0.65-to-1.00 and a minimum debt rating from Moody's or S&P of Baa3 or BBB-, respectively. As of December 31, 2017, AWR was in compliance with these covenants with an interest coverage ratio of 7.54 times interest expense, a debt ratio of 0.42-to-1.00 and debt ratings of A+ and A2.

Off-Balance-Sheet Arrangements

Registrant has various contractual obligations which are recorded as liabilities in the consolidated financial statements. Other items, such as certain purchase commitments and operating leases, are not recognized as liabilities in the consolidated financial statements, but are required to be disclosed. Except for those disclosed above in the table, Registrant does not have any other off-balance-sheet arrangements.

Effects of Inflation

The rates of GSWC are established to provide recovery of costs and a fair return on shareholders' investment. Recovery of the effects of inflation through higher water rates is dependent upon receiving adequate and timely rate increases. However, authorized rates charged to customers are usually based on a forecast of expenses and capital costs for GSWC. Rates may lag increases in costs caused by unanticipated inflation. During periods of moderate to low inflation, as has been experienced for the last several years, the effects of inflation on operating results have not been significant. Furthermore, the CPUC approves projections for a future test year in general rate cases which reduces the impact of inflation to the extent that GSWC's inflation forecasts are accurate.

For the Military Utility Privatization Subsidiaries, under the terms of the contracts with the U.S. government, the contract price is subject to an economic price adjustment on an annual basis. ASUS has experienced delays in some of its economic price adjustments. However, when adjustments are finalized, they are implemented retroactively to the effective date of the economic price adjustment.

Climate Change

Water:

GSWC considers the potential impacts of climate change in its water supply portfolio planning and its overall infrastructure replacement plans. In addition, GSWC considers the impacts of greenhouse gas emissions and other environmental concerns in its operations and infrastructure investments.

Electric:

California has established a cap-and-trade program applicable to greenhouse gas emissions. While BVES's power-plant emissions are below the reporting threshold, as a "Covered Entity", BVES has an obligation to file a report in June of each year under the program.

California and the CPUC have established renewable-energy procurement requirement timelines. BVES has entered into a ten-year contract for renewable energy credits that was approved by the CPUC. As a result of this agreement, BVES believes it will be in compliance with both the CPUC's past renewable-energy-procurement requirements and future requirements through at least 2020. However, in addition to a forecasted increase in sales, California Senate Bill 350, passed in late 2015, included extending and increasing the renewable-energy procurement requirements beyond 2020. As a result, BVES is examining its renewable supply quantities to ensure continued compliance.

BVES is also required to comply with the CPUC's emission performance standards regarding greenhouse gas emissions. BVES must file an annual attestation with the CPUC stating that BVES is in compliance with these standards. Specifically, BVES must attest to having no new ownership investment in generation facilities or no long-term commitments for generation. In February 2018, BVES filed its annual attestation with the CPUC stating that BVES was in compliance with the emission performance standards for 2017.

At this time, management cannot estimate the impact, if any, that these regulations may have on the cost of BVES's power plant operations or the cost of BVES's purchased power from third-party providers.

BVES Power-Supply Arrangements

BVES began taking power effective January 1, 2015 at a fixed cost over three-and five-year terms depending on the amount of power and period during which the power is purchased under contracts approved by the CPUC in December 2014. In addition to the purchased power contracts, BVES buys additional energy to meet peak demand as needed and sells surplus power when necessary. The average cost of power purchased, including fixed costs and the transactions in the spot market, was approximately \$73.03 per MWh for the year ended December 31, 2017 as compared to \$69.54 per MWh for the same period of 2016. BVES's average energy costs are impacted by pricing fluctuations on the spot market. However, BVES has implemented an electric-supply-cost balancing account, as approved by the CPUC, to alleviate any impacts to earnings.

Construction Program

GSWC maintains an ongoing water distribution main replacement program throughout its customer service areas based on the age and type of distribution-system materials, priority of leaks detected, remaining productive life of the distribution system and an underlying replacement schedule. In addition, GSWC upgrades its electric and water supply facilities in accordance with industry standards, and local and CPUC requirements. As of December 31, 2017, GSWC has unconditional purchase obligations for capital projects of approximately \$36.4 million. During the years ended December 31, 2017, 2016 and 2015, GSWC had capital expenditures of \$115.3 million, \$126.0 million and \$95.5 million, respectively. A portion of these capital expenditures was funded by developers through advances, which must be repaid, or contributions in aid of construction, which are not required to be repaid. During the years ended December 31, 2017, 2016 and 2015, capital expenditures funded by developers were \$3.5 million, \$5.3 million and \$4.4 million, respectively. During 2018, GSWC's company-funded capital expenditures are estimated to be approximately \$110 - \$120 million.

Contracted Services

Under the terms of the current and future utility privatization contracts with the U.S. government, each contract's price is subject to an economic price adjustment ("EPA") on an annual basis. In the event that ASUS (i) is managing more assets at specific military bases than were included in the U.S. government's request for proposal, (ii) is managing assets that are in substandard condition as compared to what was disclosed in the request for proposal, (iii) prudently incurs costs not contemplated under the terms of the utility privatization contract, and/or (iv) becomes subject to new regulatory requirements, such as more stringent water-quality standards, ASUS is permitted to file, and has filed, requests for equitable adjustment ("REA"). The timely filing for and receipt of EPAs and/or REAs continues to be critical in order for the Military Utility Privatization Subsidiaries to recover increasing costs of operating and maintaining, and renewing and replacing the water and/or wastewater systems at the military bases it serves.

Under the Budget Control Act of 2011 (the "2011 Act"), substantial automatic spending cuts, known as "sequestration," have impacted the expected levels of Department of Defense budgeting. The Military Utility Privatization Subsidiaries have not experienced any earnings impact to their existing operations and maintenance and renewal and replacement services, as utility privatization contracts are an "excepted service" within the 2011 Act. While the ongoing effects of sequestration have been mitigated through the passage of a continuing resolution for the fiscal year 2018 Department of Defense budget, similar issues may arise as part of fiscal uncertainty and/or future debt-ceiling limits imposed by Congress. However, any future impact on ASUS and its operations through the Military Utility Privatization Subsidiaries will likely be limited to (a) the timing of funding to pay for services rendered, (b) delays in the processing of EPAs and/or REAs, (c) the timing of the issuance of contract modifications for new construction work not already funded by the U.S. government, and/or (d) delays in the solicitation for and/or awarding of new contracts under the Department of Defense utility privatization program.

At times, the DCAA and/or the DCMA may, at the request of a contracting officer, perform audits/reviews of contractors for compliance with certain government guidance and regulations, such as the Federal Acquisition Regulations and Defense Federal Acquisition Regulation Supplements. Certain audit/review findings, such as system deficiencies for government-contract-business-system requirements, may result in delays in the timing of resolution of filings submitted to and/or the ability to file new proposals with the U.S. government.

Below is a summary of current and projected EPA filings for price adjustments to operations and maintenance fees and renewal and replacement fees for the Military Utility Privatization Subsidiaries.

| Military Base | EPA period | Filing Date |
|---|-----------------------------|-----------------------|
| Fort Bliss (FBWS) | October 2017-September 2018 | Third Quarter 2017 |
| Andrews Air Force Base (TUS) | February 2018-January 2019 | Fourth Quarter 2017 |
| Fort Lee (ODUS) | February 2018-January 2019 | Fourth Quarter 2017 |
| Joint Base Langley Eustis and Joint Expeditionary Base Little Creek Fort Story (ODUS) | April 2018-March 2019 | First Quarter of 2018 |
| Fort Jackson (PSUS) | February 2018-January 2019 | Fourth Quarter 2017 |
| Fort Bragg (ONUS) | March 2018-February 2019 | Fourth Quarter 2017 |

ASUS assumed the operation of the water and wastewater systems at Eglin Air Force Base on June 15, 2017. The value of this contract is approximately \$702.4 million over its 50-year term.

New Privatization Contract Award:

On September 29, 2017, ASUS was awarded a new 50-year contract by the U.S. government to operate, maintain, and provide construction management services for the water distribution and wastewater collection and treatment facilities at Fort Riley, a United States Army installation located in Kansas. The initial value of the contract is approximately \$601.4 million over the 50-year period and is subject to annual economic price adjustments. This initial value is also subject to adjustment based on the results of a joint inventory of assets to be performed during the transition period. ASUS expects to assume operations at Fort Riley following the completion of a six- to twelve-month transition period currently underway.

Regulatory Matters

Certificates of Public Convenience and Necessity

GSWC holds Certificates of Public Convenience and Necessity (“CPCN”) granted by the CPUC in each of the ratemaking areas it serves. ASUS is regulated, if applicable, by the state in which it primarily conducts water and/or wastewater operations. FBWS holds a CPCN from the Public Utilities Commission of Texas. The Virginia State Corporation Commission exercises jurisdiction over ODUS as a public service company. The Maryland Public Service Commission approved the right of TUS to operate as a water and wastewater utility at Joint Base Andrews, Maryland, based on certain conditions. The South Carolina Public Service Commission exercises jurisdiction over PSUS as a public service company. ONUS is regulated by the North Carolina Public Service Commission. ECUS is not subject to regulation by the Florida Public Service Commission. FRUS is not subject to regulation by the Kansas Corporation Commission.

Rate Regulation

GSWC is subject to regulation by the CPUC, which has broad authority over service and facilities, rates, classification of accounts, valuation of properties, the purchase, disposition and mortgaging of properties necessary or useful in rendering public utility service, the issuance of securities, the granting of certificates of public convenience and necessity as to the extension of services and facilities and various other matters.

Rates that GSWC is authorized to charge are determined by the CPUC in general rate cases and are derived using rate base, cost of service and cost of capital, as projected for a future test year. Rates charged to customers vary according to customer class and rate jurisdiction and are generally set at levels allowing for recovery of prudently incurred costs, including a fair return on rate base. Rate base generally consists of the original cost of utility plant in service, plus certain other assets, such as working capital and inventory, less accumulated depreciation on utility plant in service, deferred income tax liabilities and certain other deductions.

GSWC is required to file a water general rate case (“GRC”) application every three years according to a schedule established by the CPUC. GRCs typically include an increase in the first test year with inflation-rate adjustments for expenses for the second and third years of the GRC cycle. For capital projects, there are two test years. Rates are based on a forecast of expenses and capital costs for each test year. Electric GRCs are typically filed every four years.

Rates may also be increased by offsets for certain expense increases, including, but not limited to, supply-cost offset and balancing-account amortization, advice letter filings related to certain plant additions and other operating cost increases.

Neither the operations nor rates of AWR and ASUS are directly regulated by the CPUC. The CPUC does, however, regulate certain transactions between GSWC and ASUS and between GSWC and AWR.

Water Rates for 2018:

In January 2018, the CPUC approved third-year rate increases effective January 1, 2018. The new rates are expected to increase the adopted water gross margin in 2018 by approximately \$4.5 million as compared to the 2017 adopted margin, adjusted for Ojai's 2017 actual margin through June 8, 2017, the date on which the Ojai water system was sold.

Water Rates for 2016 and 2017:

In December 2016, the CPUC issued a decision in the water general rate case for GSWC. The 2016 rates approved by the CPUC in the decision were retroactive to January 1, 2016. However, because of the delay in issuing a decision, the CPUC ordered GSWC to bypass implementing 2016 rates and to implement 2017 rates after the correction of minor rate calculations in the December 2016 decision. The CPUC completed the corrections and subsequently issued a final decision in March 2017. In July 2017, GSWC filed with the CPUC for recovery of \$9.9 million in revenue shortfall, representing the net differences between the actual rates billed from January 2016 through April 2017 and the new rates adopted in the final decision. In

September 2017, GSWC implemented surcharges to recover this revenue shortfall over 12- to 36-month amortization periods. The 2017 rates were effective retroactive to January 1, 2017 and increased the adopted margin by approximately \$3.3 million as compared to 2016.

Pending General Rate Case Filings:

In July 2017, GSWC filed a general rate case application for all of its water regions and the general office. This general rate case will determine new water rates for the years 2019, 2020 and 2021. Among other things, GSWC's requested capital budgets in this application average approximately \$125 million per year for the three-year rate cycle. A decision in the water general rate case is scheduled for the fourth quarter of 2018 with new rates to become effective January 1, 2019.

On May 1, 2017, GSWC filed its electric general rate case application with the CPUC. This general rate case will determine new electric rates for the years 2018 through 2021. A final decision in the electric general rate case is expected in 2018, with rates effective retroactive to January 1, 2018.

Cost of Capital Proceeding for GSWC's Water Regions:

In early April 2017, GSWC filed its water cost of capital application with the CPUC in which it requested an overall weighted return on rate base of 9.11%, including an updated cost of debt of 6.6% and a return on equity ("ROE") of 11%. On February 6, 2018, GSWC, along with three other investor-owned water utilities that serve California, received a Proposed Decision from the CPUC issued in connection with the pending cost of capital proceeding. The Proposed Decision recommends an authorized ROE of 8.23% and a return on rate base of 7.39% for GSWC's water segment, effective January 1, 2018. GSWC's current authorized ROE for its water segment is 9.43% and its return on rate base is 8.34%. The Proposed Decision also continues the water cost of capital adjustment mechanism. If the CPUC adopts the recommendations in the Proposed Decision, the lower return on rate base is expected to decrease GSWC's annual revenue requirement by approximately \$9.5 million beginning in 2018. GSWC filed its comments on the Proposed Decision on February 26, 2018 with a final decision expected in late March 2018.

Tax Cuts and Jobs Act:

On December 22, 2017, the Tax Cuts and Jobs Act (the "Tax Act") was signed into federal law. The provisions of this major tax reform are generally effective January 1, 2018. Among its significant provisions, the Tax Act reduces the federal corporate tax rate from 35% to 21%. As a result of the Tax Act, in March 2018 GSWC intends to file updated testimony revising the revenue requirements and rate base in its pending water general rate case that will set new rates for the years 2019 - 2021, and in its pending electric general rate case that will set new rates for years 2018 - 2021. In addition, the CPUC's Water Division ordered water utilities to establish a memorandum account to track, effective January 1, 2018, the impact on the revenue requirements caused by changes in the tax rate and other potential tax code changes from the Tax Act. The impact to be included in this memorandum account is expected to generate a regulatory liability to be refunded to water customers at a later date. At this time, GSWC is unable to predict the timing of the CPUC decision in connection with such filings.

Other Regulatory Matters

New Service Territory Application, Westborough Development, Sacramento County:

On October 12, 2004, GSWC and Aerojet-General Corporation ("Aerojet") reached a settlement relating to groundwater contamination impacting GSWC's Arden-Cordova Water System. Portions of the settlement called for GSWC to serve new territory, subject to CPUC approval, on property owned by Aerojet known as Westborough. Aerojet and GSWC have been working cooperatively to identify and implement the best alternative to meet the long-term water supply needs of GSWC's Rancho Cordova customers within the Arden-Cordova service area. In August 2016, GSWC entered into agreements with Aerojet and Carmichael Water District (CWD) to provide GSWC with 5,000 acre-feet per year of treated water from CWD's Bajamont Water Treatment Plant for GSWC's Rancho Cordova customers within the Arden-Cordova service area. GSWC began taking delivery of this water in 2017. GSWC and Aerojet will continue to work cooperatively to identify the necessary water resources for the new Westborough development area owned by Aerojet. The County of Sacramento and the City of Folsom, through various arrangements, have agreed not to protest GSWC's application to the CPUC for a CPCN for this territory.

For more information regarding significant regulatory matters, see Note 2 of "Notes to Financial Statements" included in Part II, Item 8, in Financial Statements and Supplementary Data.

Environmental Matters

AWR's subsidiaries are subject to stringent environmental regulations, including the 1996 amendments to the Federal Safe Drinking Water Act. GSWC is required to comply with the safe drinking water standards established by the U.S. Environmental Protection Agency ("U.S. EPA") and the Division of Drinking Water ("DDW"), under the State Water Resources Control Board ("SWRCB"). The U.S. EPA regulates contaminants that may have adverse health effects that are known or likely to occur at levels of public health concern, and the regulation of which will provide a meaningful opportunity for health risk reduction. The DDW, acting on behalf of the U.S. EPA, administers the U.S. EPA's program in California. Similar state agencies administer these rules in the other states in which Registrant operates.

GSWC currently tests its water supplies and water systems according to, among other things, requirements listed in the Federal Safe Drinking Water Act ("SDWA"). GSWC works proactively with third parties and governmental agencies to address issues relating to known contamination threatening GSWC water sources. GSWC also incurs operating costs for testing to determine the levels, if any, of the constituents in its sources of supply and additional expense to treat contaminants in order to meet the federal and state maximum contaminant level standards and consumer demands. GSWC expects to incur additional capital costs as well as increased operating costs to maintain or improve the quality of water delivered to its customers in light of anticipated stress on water resources associated with watershed and aquifer pollution, as well as to meet future water quality standards and consumer expectations. The CPUC ratemaking process provides GSWC with the opportunity to recover prudently incurred capital and operating costs in future filings associated with achieving water quality standards. Management believes that such incurred and expected future costs should be authorized for recovery by the CPUC.

Matters Relating to Environmental Cleanup

GSWC has been involved in environmental remediation and cleanup at a plant site ("Chadron Plant") that contained an underground storage tank which was used to store gasoline for its vehicles. This tank was removed from the ground in July 1990 along with the dispenser and ancillary piping. Since then, GSWC has been involved in various remediation activities at this site.

As of December 31, 2017, the total spent to cleanup and remediate GSWC's plant facility was approximately \$5.3 million, of which \$1.5 million has been paid by the State of California Underground Storage Tank Fund. Amounts paid by GSWC have been included in rate base and approved by the CPUC for recovery. As of December 31, 2017, GSWC has a regulatory asset and an accrued liability for the estimated additional cost of \$1.3 million to complete the cleanup at the site. The estimate includes costs for continued activities of groundwater cleanup and monitoring, future soil treatment, and site closure related activities. The ultimate cost may vary as there are many unknowns in remediation of underground gasoline spills and this is an estimate based on currently available information. Management also believes it is probable that the estimated additional costs will be approved for inclusion in rate base by the CPUC.

Matters Relating to Military Privatization Contracts

Each of the Military Utility Privatization Subsidiaries is responsible for testing the water and wastewater systems on the military bases on which it operates in accordance with applicable law.

Each of the Military Utility Privatization Subsidiaries has the right to seek an equitable adjustment to its contract in the event that there are changes in environmental laws, a change in the quality of water used in providing water service or wastewater discharged by the U.S. government or contamination of the air or soil not caused by the fault or negligence of the Military Utility Privatization Subsidiary. These changes can impact operations and maintenance and renewal and replacement costs under the contracts. The U.S. government is responsible for environmental contamination due to its fault or negligence and for environmental contamination that occurred prior to the execution of a contract.

Security Issues

GSWC has security systems and infrastructure in place intended to prevent unlawful intrusion, service disruption and cyber-attacks. GSWC utilizes a variety of physical security measures to protect its facilities. GSWC also considers advances in security and emergency preparedness technology and relevant industry developments in developing its capital-improvement plans. GSWC intends to seek approval of the CPUC to recover any additional costs that it incurs in enhancing the security, reliability and resiliency of its water systems.

The Military Utility Privatization Subsidiaries operate facilities within the boundaries of military bases which provide limited access to the general public. To further enhance security, in prior years, certain upgrades were completed at various military bases through contract modifications funded by the U.S. government.

Registrant has evaluated its cyber-security systems and continues to address identified areas of improvement with respect to U.S. government regulations regarding cyber-security of government contractors. These improvements include the physical security at all of the office and employee facilities it operates. Registrant was in compliance with these regulations by the mandated December 31, 2017 deadline.

Despite its efforts, Registrant cannot guarantee that intrusions, cyber-attacks or other attacks will not cause water or electric system problems, disrupt service to customers, compromise important data or systems or result in unintended release of customer or employee information.

California Drought

In April 2017, the Governor of California ended the drought state of emergency in most of California in response to significantly improved water supply conditions resulting from substantial rainfall and snowpack in late 2016 and early 2017. On the same date, the SWRCB and related state agencies released a plan to establish a framework for long-term water use efficiency standards. The plan includes continued bans on wasteful practices and outlines the SWRCB's vision for continued implementation of the Governor's executive order on water conservation. In November 2017, the SWRCB initiated a rulemaking to prohibit wasteful water use practices. It is anticipated the rulemaking will become final in the first quarter of 2018. The proposed permanent water use restrictions are similar to the emergency prohibitions on wasteful water uses that were in effect during the 2012 - 2017 drought.

California's recent period of drought resulted in reduced recharge to the state's groundwater basins. GSWC utilizes groundwater from numerous groundwater basins throughout the state. Several of these basins, especially smaller basins, experienced lower groundwater levels because of the drought. Several of GSWC's service areas rely on groundwater as their only source of supply. Given the critical nature of the groundwater levels in California's Central Coast area, GSWC implemented mandatory water restrictions in certain service areas, in accordance with CPUC procedures. In the event of water supply shortages beyond the locally available supply, GSWC would need to transport additional water from other areas, increasing the cost of water supply.

Precipitation during the 2016-2017 water year was considered a very wet year with rainfall in northern California being above normal levels. However, precipitation during December 2017 and early 2018 has been below average for much of California and may indicate less than normal rainfall for 2018. Should dry conditions persist through the remainder of 2018, areas served by these smaller basins may experience further mandatory conservation measures in the future.

As of February 20, 2018, the U.S. Drought Monitor estimated approximately 20 percent of California in the rank of "Severe Drought" while approximately 48 percent continued in the rank of "Moderate Drought". If dry conditions persist, the SWQCB or other regulatory agencies may impose emergency drought actions.

GSWC's Water Supply

During 2017, GSWC delivered approximately 62.2 million hundred cubic feet ("ccf") of water to its customers, which is an average of about 391 acre-feet per day (an acre-foot is approximately 435.6 ccf or 326,000 gallons). Approximately 55% of GSWC's supply came from groundwater production wells situated throughout GSWC's service areas. GSWC supplemented its groundwater production with wholesale purchases from Metropolitan Water District ("MWD") member agencies and regional water suppliers (roughly 42% of total demand) and with authorized diversions from rivers (roughly 3%) under contracts with the United States Bureau of Reclamation ("Bureau") and the Sacramento Municipal Utility District ("SMUD"). GSWC also utilizes recycled water supplies to serve recycled water customers in several service areas. During 2016, GSWC supplied 59.9 million ccf of water, approximately 55% of which was produced from groundwater sources and 45% was purchased from regional wholesalers and surface water diversions under contracts with the Bureau and SMUD. GSWC continually assesses its water rights and groundwater storage assets.

Groundwater

Over the years, population growth in GSWC's service areas and increases in the amount of groundwater used have resulted in both cooperative and judicially enforced regimes for owning water rights and managing groundwater basins for long-term sustainability. GSWC management actively participates in efforts to protect groundwater basins from over-use and from contamination and to protect its water rights. In some periods, these efforts require reductions in groundwater pumping and increased reliance on alternative water resources.

GSWC has a diverse water supply portfolio which includes approximately 73,600 acre-feet of adjudicated groundwater rights, surface water rights, and a number of unadjudicated water rights to help meet supply requirements. The productivity of GSWC's groundwater resources varies from year to year depending upon a variety of factors, including the amount, duration, length and location of rainfall, the availability of imported replenishment water, the amount of water

previously stored in groundwater basins, the amount and seasonality of water use by GSWC's customers and others, evolving challenges to water quality, and a variety of legal limitations on use, if a groundwater basin is, or may be, in an overdrafted condition.

On September 16, 2014, the Governor of California signed a package of three bills, which taken together are known as the "Sustainable Groundwater Management Act." The purpose of the act is to provide local agencies with tools and authority to manage groundwater basins in a sustainable manner over the long term. Local "Groundwater Sustainability Agencies" are to be formed for each defined groundwater basin, and Groundwater Sustainability Plans must be completed for those basins by the year 2022 (by 2020 for those considered in critical overdraft). The act contains numerous provisions to protect existing water rights, and is not anticipated to infringe upon or otherwise alter existing surface water or groundwater rights under current law. GSWC intends to cooperate to the fullest extent allowed in the development of these Groundwater Sustainability Agencies and resulting Groundwater Sustainability Plans to protect its interests in proper management of these groundwater basins.

Metropolitan Water District /State Water Project

Water supplies available to the MWD through the State Water Project ("SWP") vary from year to year based on several factors. Historically, weather was the primary factor in determining annual deliveries. However, biological opinions issued in late 2007 have limited water diversions through the Sacramento/San Joaquin Delta ("Delta") resulting in pumping restrictions on the SWP. Even with variable SWP deliveries, MWD has been able to provide sufficient quantities of water to satisfy the needs of its member agencies and their customers. Under its Integrated Resources Plan, MWD estimates that it can meet its member agencies' demands over at least the next 20 years.

Every year, the California Department of Water Resources ("DWR") establishes the SWP allocation for water deliveries to the state water contractors. The SWP is a major source of water for the MWD. DWR generally establishes a percentage allocation of delivery requests based on a number of factors, including weather patterns, snow-pack levels, reservoir levels and biological diversion restrictions. On November 30, 2017, DWR set an initial SWP delivery allocation at 15% of requests for the 2018 calendar year. This allocation will likely change depending on rain and snowfall received this winter.

Imported Water

GSWC also manages a portfolio of water supply arrangements with water wholesalers who may import water from outside the immediate service area. For example, GSWC has contracts with various governmental entities (principally MWD member agencies) and other parties to purchase water through a total of 62 connections for distribution to customers, in addition to numerous emergency connections. MWD is a public agency organized and managed to provide a supplemental, imported supply to its member public agencies. There are 26 such member agencies, consisting of 14 cities, 11 municipal water districts and one county water authority. GSWC has 46 connections to MWD's water distribution facilities and those of member agencies. GSWC purchases MWD water through six separate member agencies aggregating 56,166 acre-feet annually. MWD's principal source of water is the SWP and the Colorado River via the Colorado River Aqueduct.

GSWC has contracts to purchase water or water rights for an aggregate amount of \$4.8 million as of December 31, 2017. Included in the \$4.8 million is a remaining commitment of \$2.4 million under an agreement with the City of Claremont ("the City") to lease water rights that were ascribed to the City as part of the Six Basins adjudication. The initial term of the agreement expires in 2028. GSWC may exercise an option to renew this agreement for 10 additional years. The remaining \$2.4 million are for commitments for purchased water with other third parties which expire through 2038.

Potential Additional Sources of Supply

GSWC continues to assess additional water supply opportunities to expand and strengthen its water supply portfolio for service to customers. In June 2010, GSWC signed an agreement with Cadiz Inc. giving GSWC the right to acquire an annual supply of Cadiz water once Cadiz secures appropriate transport and conveyance facilities and necessary agreements to move water from Cadiz's property in Fenner Valley, San Bernardino County, to metropolitan Southern California. In addition, GSWC is actively pursuing participation in desalination proposals and various recycled water opportunities.

Military Utility Privatization Subsidiaries

The U.S. government is responsible for providing the source of supply for all water on each of the bases served by the Military Utility Privatization Subsidiaries at no cost to the Military Utility Privatization Subsidiaries. Once received from the U.S. government, ASUS is responsible for ensuring the continued compliance of the provided source of supply with all federal, state and local regulations.

New Accounting Pronouncements

Registrant is subject to newly issued requirements as well as changes in existing requirements issued by the Financial Accounting Standards Board. See *Note 1 of Notes to Consolidated Financial Statements*.

Item 7A. Quantitative and Qualitative Disclosures About Market Risk

Registrant is exposed to certain market risks, including fluctuations in interest rates, and commodity price risk primarily relating to changes in the market price of electricity. Market risk is the potential loss arising from adverse changes in prevailing market rates and prices.

Interest Rate Risk

A significant portion of Registrant's capital structure is comprised of fixed-rate debt. Market risk related to our fixed-rate debt is deemed to be the potential increase in fair value resulting from a decrease in interest rates. At December 31, 2017, the fair value of Registrant's long-term debt was \$424.0 million. A hypothetical ten percent decrease in market interest rates would have resulted in a \$14.0 million increase in the fair value of Registrant's long-term debt.

Market risk related to Registrant's variable-rate debt is estimated as the potential decrease in pretax earnings resulting from an increase in interest rates. As of December 31, 2017, Registrant had \$18,000 in variable-interest-rate debt outstanding. A hypothetical one percent rise in interest rates would not have a material impact on earnings.

At December 31, 2017, Registrant did not believe that its short-term debt was subject to interest-rate risk due to the fair market value being approximately equal to the carrying value.

Commodity/Derivative Risk

GSWC's electric division, BVES, is exposed to commodity price risk primarily relating to changes in the market price of electricity. To manage its exposure to energy price risk, BVES from time to time executes purchased power contracts that qualify as derivative instruments, requiring mark-to-market derivative accounting under the accounting guidance for derivatives. A derivative financial instrument or other contract derives its value from another investment or designated benchmark.

In December 2014, the CPUC approved an application, which allowed BVES to execute long-term purchased power contracts with energy providers, which became effective on January 1, 2015. BVES began taking power under these long-term contracts at a fixed cost over three- and five-year terms depending on the amount of power and period during which the power is purchased under the contracts.

The long-term contracts executed in December 2014 qualify for derivative accounting treatment. Among other things, the CPUC approval in December 2014 also authorized BVES to establish a regulatory memorandum account to offset the mark-to-market entries required by the accounting guidance. Accordingly, all unrealized gains and losses generated from these purchased power contracts are deferred on a monthly basis into a non-interest bearing regulatory memorandum account that tracks the changes in fair value of the derivative throughout the term of the contract. As a result, the unrealized gains and losses on these contracts do not impact GSWC's earnings. The three-year term contract expired in 2017. As of December 31, 2017, there was a \$2.9 million unrealized loss in the memorandum account for the remaining purchased power contract as a result of a drop in energy prices since the execution of the contract.

Except as discussed above, Registrant has had no other derivative financial instruments, financial instruments with significant off-balance sheet risks or financial instruments with concentrations of credit risk.

Report of Independent Registered Public Accounting Firm

To the Board of Directors and Shareholders of
American States Water Company

Opinions on the Financial Statements and Internal Control over Financial Reporting

We have audited the accompanying consolidated balance sheets and statements of capitalization of American States Water Company and its subsidiaries as of December 31, 2017 and 2016, and the related consolidated statements of income, changes in common shareholders' equity and cash flows for each of the three years in the period ended December 31, 2017, including the related notes and schedule of condensed financial information of American States Water Company for each of the three years in the period ended December 31, 2017 appearing under Item 15(a)(2) (collectively referred to as the "consolidated financial statements"). We also have audited the Company's internal control over financial reporting as of December 31, 2017, based on criteria established in *Internal Control - Integrated Framework* (2013) issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO).

In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the financial position of the Company as of December 31, 2017 and 2016, and the results of their operations and their cash flows for each of the three years in the period ended December 31, 2017 in conformity with accounting principles generally accepted in the United States of America. Also in our opinion, the Company maintained, in all material respects, effective internal control over financial reporting as of December 31, 2017, based on criteria established in *Internal Control - Integrated Framework* (2013) issued by the COSO.

Basis for Opinions

The Company's management is responsible for these consolidated financial statements, for maintaining effective internal control over financial reporting, and for its assessment of the effectiveness of internal control over financial reporting, included in Management's Report on Internal Control over Financial Reporting appearing under Item 9A. Our responsibility is to express opinions on the Company's consolidated financial statements and on the Company's internal control over financial reporting based on our audits. We are a public accounting firm registered with the Public Company Accounting Oversight Board (United States) ("PCAOB") and are required to be independent with respect to the Company in accordance with the U.S. federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission and the PCAOB. We conducted our audits in accordance with the standards of the PCAOB. Those standards require that we plan and perform the audits to obtain reasonable assurance about whether the consolidated financial statements are free of material misstatement, whether due to error or fraud, and whether effective internal control over financial reporting was maintained in all material respects.

Our audits of the consolidated financial statements included performing procedures to assess the risks of material misstatement of the consolidated financial statements, whether due to error or fraud, and performing procedures that respond to those risks. Such procedures included examining, on a test basis, evidence regarding the amounts and disclosures in the consolidated financial statements. Our audits also included evaluating the accounting principles used and significant estimates made by management, as well as evaluating the overall presentation of the consolidated financial statements. Our audit of internal control over financial reporting included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, and testing and evaluating the design and operating effectiveness of internal control based on the assessed risk. Our audits also included performing such other procedures as we considered necessary in the circumstances. We believe that our audits provide a reasonable basis for our opinions.

Definition and Limitations of Internal Control over Financial Reporting

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (i) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (ii) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (iii) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

/s/PricewaterhouseCoopers LLP

Los Angeles, California

February 26, 2018

We have served as the Company's auditor since 2002.

Report of Independent Registered Public Accounting Firm

To the Board of Directors and Shareholder of
Golden State Water Company

Opinion on the Financial Statements

We have audited the accompanying balance sheets and statements of capitalization of Golden State Water Company as of December 31, 2017 and 2016, and the related statements of income, changes in common shareholder's equity and cash flows for each of the three years in the period ended December 31, 2017, including the related notes (collectively referred to as the "financial statements"). In our opinion, the financial statements present fairly, in all material respects, the financial position of the Company as of December 31, 2017 and 2016, and the results of its operations and its cash flows for each of the three years in the period ended December 31, 2017 in conformity with accounting principles generally accepted in the United States of America.

Basis for Opinion

These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on the Company's financial statements based on our audits. We are a public accounting firm registered with the Public Company Accounting Oversight Board (United States) ("PCAOB") and are required to be independent with respect to the Company in accordance with the U.S. federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission and the PCAOB.

We conducted our audits of these financial statements in accordance with the standards of the PCAOB. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement, whether due to error or fraud. The Company is not required to have, nor were we engaged to perform, an audit of its internal control over financial reporting. As part of our audits we are required to obtain an understanding of internal control over financial reporting but not for the purpose of expressing an opinion on the effectiveness of the Company's internal control over financial reporting. Accordingly, we express no such opinion.

Our audits included performing procedures to assess the risks of material misstatement of the financial statements, whether due to error or fraud, and performing procedures that respond to those risks. Such procedures included examining, on a test basis, evidence regarding the amounts and disclosures in the financial statements. Our audits also included evaluating the accounting principles used and significant estimates made by management, as well as evaluating the overall presentation of the financial statements. We believe that our audits provide a reasonable basis for our opinion.

/s/PricewaterhouseCoopers LLP

Los Angeles, California

February 26, 2018

We have served as the Company's auditor since 2002.

AMERICAN STATES WATER COMPANY AND SUBSIDIARIES
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

Note 1 — Summary of Significant Accounting Policies

Nature of Operations: American States Water Company (“AWR”) is the parent company of Golden State Water Company (“GSWC”) and American States Utility Services, Inc. (“ASUS”) (and its wholly owned subsidiaries, Fort Bliss Water Services Company (“FBWS”), Terrapin Utility Services, Inc. (“TUS”), Old Dominion Utility Services, Inc. (“ODUS”), Palmetto State Utility Services, Inc. (“PSUS”), Old North Utility Services, Inc. (“ONUS”), Emerald Coast Utility Services, Inc. (“ECUS”), and Fort Riley Utility Services, Inc. (“FRUS”). AWR and its subsidiaries may be collectively referred to as “Registrant” or “the Company.” The subsidiaries of ASUS are collectively referred to as the “Military Utility Privatization Subsidiaries.”

GSWC is a public utility engaged principally in the purchase, production, distribution and sale of water in California serving approximately 259,000 customers. GSWC also distributes electricity in several San Bernardino County mountain communities in California serving approximately 24,000 customers through its Bear Valley Electric Service (“BVES”) division. Although Registrant has a diversified base of residential, industrial and other customers, revenues derived from commercial and residential water customers accounted for approximately 90% of total water revenues in 2017, 2016 and 2015. The California Public Utilities Commission (“CPUC”) regulates GSWC’s water and electric businesses in matters including properties, rates, services, facilities, and transactions by GSWC with its affiliates.

ASUS, through its Military Utility Privatization Subsidiaries, operates, maintains and performs construction activities (including renewal and replacement capital work) on water and/or wastewater systems at various U.S. military bases pursuant to 50-year firm fixed-price contracts. These contracts are subject to annual economic price adjustments and modifications for changes in circumstances, changes in laws and regulations and additions to the contract value for new construction of facilities at the military bases. In September 2017, ASUS was awarded a new 50-year contract by the U.S. government to operate, maintain, and provide construction management services for the water distribution and wastewater collection and treatment facilities at Fort Riley, a United States Army installation located in Kansas. The contract over the 50-year period is subject to annual economic price adjustments. ASUS expects to assume operations at Fort Riley following the completion of a six-to-twelve-month transition period currently underway.

There is no direct regulatory oversight by the CPUC over AWR or the operations, rates or services provided by ASUS or the Military Utility Privatization Subsidiaries.

Basis of Presentation: The consolidated financial statements and notes thereto are presented in a combined report filed by two separate Registrants: AWR and GSWC. References in this report to “Registrant” are to AWR and GSWC, collectively, unless otherwise specified.

AWR owns all of the outstanding Common Shares of GSWC and ASUS. ASUS owns all of the outstanding Common shares of the Military Utility Privatization Subsidiaries. The consolidated financial statements of AWR include the accounts of AWR and its subsidiaries. These financial statements are prepared in conformity with accounting principles generally accepted in the United States of America. Inter-company transactions and balances have been eliminated in the AWR consolidated financial statements.

Related-Party Transactions: GSWC and ASUS provide and/or receive various support services to and from their parent, AWR, and among themselves. GSWC also allocates certain corporate office administrative and general costs to its affiliate, ASUS, using allocation factors approved by the CPUC. During the years ended December 31, 2017, 2016 and 2015, GSWC allocated to ASUS approximately \$4.0 million, \$3.9 million and \$2.6 million, respectively, of corporate office administrative and general costs. In addition, AWR has a \$150.0 million syndicated credit facility, which expires in May 2018. Management intends to renew the credit facility prior to its expiration. AWR borrows under this facility and provides funds to its subsidiaries, including GSWC, in support of their operations. The interest rate charged to GSWC and ASUS is sufficient to cover AWR’s interest cost under the credit facility. Amounts owed to GSWC by AWR, including for allocated expenses, are included in GSWC's inter-company receivables as of December 31, 2017 and 2016.

In October 2015, AWR issued interest-bearing promissory notes (the “Notes”) to GSWC and ASUS for \$40 million and \$10 million, respectively, which expire in May 2018. Under the terms of the Notes, AWR may borrow from GSWC and ASUS amounts up to \$40 million and \$10 million, respectively, for working capital purposes. AWR agrees to pay any unpaid principal amounts outstanding under these notes, plus accrued interest. As of December 31, 2017 and 2016, there were no amounts outstanding under these notes.

AMERICAN STATES WATER COMPANY AND SUBSIDIARIES
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

Utility Accounting: Registrant's accounting policies conform to accounting principles generally accepted in the United States of America ("U.S. GAAP"), including the accounting principles for rate-regulated enterprises, which reflect the ratemaking policies of the CPUC and the Federal Energy Regulatory Commission. GSWC has incurred various costs and received various credits reflected as regulatory assets and liabilities. Accounting for such costs and credits as regulatory assets and liabilities is in accordance with the guidance for accounting for the effects of certain types of regulation. This guidance sets forth the application of U.S. GAAP for those companies whose rates are established by or are subject to approval by an independent third-party regulator.

Under such accounting guidance, rate-regulated entities defer costs and credits on the balance sheet as regulatory assets and liabilities when it is probable that those costs and credits will be recognized in the ratemaking process in a period different from the period in which they would have been reflected in income by an unregulated company. These regulatory assets and liabilities are then recognized in the income statement in the period in which the same amounts are reflected in the rates charged for service. The amounts included as regulatory assets and liabilities that will be collected or refunded over a period exceeding one year are classified as long-term assets and liabilities as of December 31, 2017 and 2016.

Property and Depreciation: Registrant's property consists primarily of regulated utility plant at GSWC. GSWC capitalizes, as utility plant, the cost of construction and the cost of additions, betterments and replacements of retired units of property. Such cost includes labor, material and certain indirect charges. Water systems acquired are recorded at estimated original cost of utility plant when first devoted to utility service and the applicable depreciation is recorded to accumulated depreciation. The difference between the estimated original cost, less accumulated depreciation, and the purchase price, if recognized by the regulator, is recorded as an acquisition adjustment within utility plant.

Depreciation is computed on the straight-line, remaining-life basis, group method, in accordance with the applicable ratemaking process. GSWC's provision for depreciation expressed as a percentage of the aggregate depreciable asset balances was 2.6% for 2017, 2.9% for 2016, and 3.2% for 2015. Depreciation computed on GSWC's transportation equipment is recorded in other operating expenses and totaled \$242,000, \$259,000 and \$641,000 for the years ended December 31, 2017, 2016 and 2015, respectively. Expenditures for maintenance and repairs are expensed as incurred. Replaced or retired property costs, including cost of removal, are charged to the accumulated provision for depreciation.

Estimated useful lives of GSWC's utility plant, as authorized by the CPUC, are as follows:

| | |
|-------------------------------|----------------------|
| Source of water supply | 30 years to 50 years |
| Pumping | 25 years to 40 years |
| Water treatment | 20 years to 35 years |
| Transmission and distribution | 25 years to 55 years |
| Generation | 40 years |
| Other plant | 7 years to 40 years |

Non-regulated property consists primarily of equipment utilized by ASUS and its subsidiaries for its operations. This property is stated at cost, net of accumulated depreciation, which is calculated using the straight-line method over the useful lives of the assets.

Asset Retirement Obligations: GSWC has a legal obligation for the retirement of its wells, which by law need to be properly capped at the time of removal. As such, GSWC incurs asset retirement obligations. GSWC records the fair value of a liability for these asset retirement obligations in the period in which they are incurred. When the liability is initially recorded, GSWC capitalizes the cost by increasing the carrying amount of the related long-lived asset. Over time, the liability is accreted to its present value each period, and the capitalized cost is depreciated over the useful life of the related asset. Upon settlement of the liability, GSWC either settles the obligation for its recorded amount or incurs a gain or loss upon settlement. Retirement costs have historically been recovered through rates subsequent to the retirement costs being incurred. Accordingly, recoverability of GSWC's asset retirement obligations are reflected as a regulatory asset. GSWC also reflects the loss or gain at settlement as a regulatory asset or liability on the balance sheet.

With regards to removal costs associated with certain other long-lived assets, such as water mains, distribution and transmission assets, asset retirement obligations have not been recognized as GSWC believes that it will not be obligated to remove these assets. There are no CPUC rules or regulations that require GSWC to remove any of its other long-lived assets. In addition, GSWC's water pipelines are not subject to regulation by any federal regulatory agency. GSWC has franchise agreements with various municipalities in order to use the public right of way for utility purposes (i.e., operate water

AMERICAN STATES WATER COMPANY AND SUBSIDIARIES
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

distribution and transmission assets), and if certain events occur in the future, GSWC could be required to remove or relocate certain of its pipelines. However, it is not possible to estimate an asset retirement amount since the timing and the amount of assets that may be required to be removed, if any, is not known.

Amounts recorded for asset retirement obligations are subject to various assumptions and determinations, such as determining whether a legal obligation exists to remove assets, estimating the fair value of the costs of removal, when final removal will occur and the credit-adjusted risk-free interest rates to be utilized on discounting future liabilities. Changes that may arise over time with regard to these assumptions will change amounts recorded in the future. Revisions in estimates for timing or estimated cash flows are recognized as changes in the carrying amount of the liability and the related capitalized asset. The estimated fair value of the costs of removal was based on third-party costs.

Impairment of Long-Lived Assets: Long-lived assets are reviewed for impairment whenever events or changes in circumstances indicate that the carrying amount of an asset may not be fully recoverable in accordance with accounting guidance for impairment or disposal of long-lived assets. Registrant would recognize an impairment loss on its regulated assets only if the carrying value amount of a long-lived asset is not recoverable from customer rates authorized by the CPUC. Impairment loss is measured as the excess of the carrying value over the amounts recovered in customer rates. For the years ended December 31, 2017, 2016 and 2015, no impairment loss was incurred.

Goodwill: At December 31, 2017 and 2016, AWR had approximately \$1.1 million of goodwill. The \$1.1 million goodwill arose from ASUS's acquisition of a subcontractor's business at some of the Military Utility Privatization Subsidiaries. In accordance with the accounting guidance for testing goodwill, AWR annually assesses qualitative factors to determine whether the existence of events or circumstances leads to a determination that it is more likely than not that the fair value of a reporting unit is less than its carrying amount. For 2017, AWR's assessment of qualitative factors did not indicate that an impairment had occurred for goodwill at ASUS.

Cash and Cash Equivalents: Cash and cash equivalents include short-term cash investments with an original maturity of three months or less. At times, cash and cash equivalent balances may be in excess of federally insured limits. Cash and cash equivalents are held with financial institutions with high credit standings.

Accounts Receivable: Accounts receivable is reported on the balance sheet net of any allowance for doubtful accounts. The allowance for doubtful accounts is Registrant's best estimate of the amount of probable credit losses in Registrant's existing accounts receivable from its water and electric customers, and is determined based on historical write-off experience and the aging of account balances. Registrant reviews the allowance for doubtful accounts quarterly. Account balances are written off against the allowance when it is probable the receivable will not be recovered. When utility customers request extended payment terms, credit is extended based on regulatory guidelines, and collateral is not required. Receivables from the U.S. government include amounts due under contracts with the U.S. government to operate and maintain, and/or provide construction services for the water and/or wastewater systems at military bases. Other accounts receivable consist primarily of amounts due from third parties (non-utility customers) for various reasons, including amounts due from contractors, amounts due under settlement agreements, amounts due from other third-party prime government contractors pursuant to agreements for construction of water and/or wastewater facilities for such third-party prime contractors. The allowance for these other accounts receivable is based on Registrant's evaluation of the receivable portfolio under current conditions and a review of specific problems and such other factors that, in Registrant's judgment, should be considered in estimating losses. Allowances for doubtful accounts are disclosed in Note 16.

Materials and Supplies: Materials and supplies are stated at the lower of cost or net realizable value. Cost is computed using average cost. Major classes of materials include pipe, hydrants and valves.

Interest: Interest incurred during the construction of capital assets has generally not been capitalized for financial reporting purposes as such policy is not followed in the ratemaking process. Interest expense is generally recovered through the regulatory process. However, the CPUC has authorized certain capital projects to be filed for revenue recovery with advice letters when those projects are completed. During the time that such projects are under development and construction, GSWC may accrue an allowance for funds used during construction ("AFUDC") on the incurred expenditures to offset the cost of financing project construction. For the year ended December 31, 2017, no AFUDC was recorded. For the years ended December 31, 2016 and 2015, GSWC recorded \$101,000 and \$694,000, respectively, of AFUDC related to capital projects based on a weighted cost of capital of 8.34% for water and a cost of debt of 6.96% for electric, as approved by the CPUC.

AMERICAN STATES WATER COMPANY AND SUBSIDIARIES
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

Water and Electric Operating Revenues: GSWC records water and electric utility operating revenues when the service is provided to customers. Revenues include amounts billed to customers on a cycle basis based on meter readings for services provided and unbilled revenues representing estimated amounts to be billed for usage from the last meter reading date to the end of the accounting period. Unbilled revenues are based on historical customer usage to estimate unbilled usage.

Alternative-Revenue Programs: As authorized by the CPUC, GSWC records in revenues the difference between the adopted level of volumetric revenues as authorized by the CPUC for metered accounts (volumetric revenues) and the actual volumetric revenues recovered in customer rates. If this difference results in an under-collection of revenues, GSWC records the additional revenue only to the extent that they are expected to be collected within 24 months following the year in which they are recorded in accordance with the accounting guidance for alternative-revenue programs.

Contracted Services Revenues: Revenues from ASUS contract operations and maintenance agreements are recognized on a monthly basis when services have been rendered to the U.S. government. Revenues for construction contracts are recognized based on the percentage-of-completion and cost-plus methods of accounting. In accordance with U.S. GAAP, revenue recognition under these methods requires ASUS to estimate the progress toward completion on a contract in terms of efforts such as costs incurred. This approach is used because management considers them to be the best available measure of progress on these contracts. Revenues from cost-plus contracts of ASUS are recognized on the basis of costs incurred during the period plus the profit earned, measured by the cost-to-cost method. Unbilled receivables from the U.S. government represent amounts to be billed for construction work completed and/or for services rendered pursuant to contracts with the U.S. government, which are not presently billable but which will be billed under the terms of those contracts.

Construction costs for ASUS include all direct material and labor costs charged by subcontractors, direct labor of employees of the Military Utility Privatization Subsidiaries, and those indirect costs related to contract performance, such as indirect labor, supplies, and tools. The factors considered in including such costs in revenues and expenses are that ASUS and/or the Military Utility Privatization Subsidiaries: (i) are the primary obligor in these arrangements with the U.S. government and the third-party prime contractors, (ii) have latitude in establishing pricing, and (iii) bear credit risk in the collection of receivables. Administrative and general costs are charged to expense as incurred. Precontract costs for ASUS, which consist of design and engineering labor costs, are deferred if they are probable of recovery and are expensed as incurred if they are not probable of recovery. Deferred precontract costs have been immaterial to date. Provisions for estimated losses on uncompleted contracts are made in the period in which such losses are determined.

Changes in job performance, job conditions, change orders and estimated profitability, including those arising from contract penalty provisions, and final contract settlements may result in revisions to costs and income for ASUS and are recognized in the period in which the revisions are determined.

The asset "Costs and estimated earnings in excess of billings on contracts" represents revenues recognized in excess of amounts billed. The liability "Billings in excess of costs and estimated earnings on contracts" represents billings in excess of revenues recognized. Amounts expected to be earned/collected in the next 12-months have been classified as current.

Debt Issuance Costs and Redemption Premiums: Original debt issuance costs are deducted from the carrying value of the associated debt liability and amortized over the lives of the respective issues. Premiums paid on the early redemption of debt, which is reacquired through refunding, are deferred and amortized over the life of the debt issued to finance the refunding as Registrant normally receives recovery of these costs in rates.

Advances for Construction and Contributions in Aid of Construction: Advances for construction represent amounts advanced by developers for the cost to construct water system facilities in order to extend water service to their properties. Advances are generally refundable in equal annual installments, generally over 40 years. In certain instances, GSWC makes refunds on these advances over a specific period of time based on operating revenues related to the main or as new customers are connected to receive service from the main. Contributions in aid of construction are similar to advances but require no refunding. Generally, GSWC depreciates contributed property and amortizes contributions in aid of construction at the composite rate of the related property. Utility plant funded by advances and contributions is excluded from rate base.

AMERICAN STATES WATER COMPANY AND SUBSIDIARIES
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

Fair Value of Financial Instruments: For cash and cash equivalents, accounts receivable, accounts payable and short-term debt, the carrying amount is assumed to approximate fair value due to the short-term nature of the amounts. The table below estimates the fair value of long-term debt issued by GSWC. Rates available to GSWC at December 31, 2017 and 2016 for debt with similar terms and remaining maturities were used to estimate fair value for long-term debt. Changes in the assumptions will produce differing results.

| (dollars in thousands) | 2017 | | 2016 | |
|-------------------------|-----------------|------------|-----------------|------------|
| | Carrying Amount | Fair Value | Carrying Amount | Fair Value |
| Long-term debt—GSWC (1) | \$ 325,265 | \$ 424,042 | \$ 325,582 | \$ 423,124 |

(1) Excludes debt issuance costs and redemption premiums.

The accounting guidance for fair value measurements applies to all financial assets and financial liabilities that are being measured and reported on a fair value basis. Under the accounting guidance, GSWC makes fair value measurements that are classified and disclosed in one of the following three categories:

Level 1: Unadjusted quoted prices in active markets that are accessible at the measurement date for identical, unrestricted assets or liabilities;

Level 2: Quoted prices in markets that are not active, or inputs which are observable, either directly or indirectly, for substantially the full term of the asset or liability; or

Level 3: Prices or valuation techniques that require inputs that are both significant to the fair value measurement and unobservable (i.e., supported by little or no market activity).

Publicly issued notes, private placement notes and other long-term debt are measured using current U.S. corporate bond yields for similar debt instruments and are classified as Level 2. The following table sets forth by level, within the fair value hierarchy, GSWC's long-term debt measured at fair value as of December 31, 2017:

| (dollars in thousands) | Level 1 | Level 2 | Level 3 | Total |
|------------------------|---------|------------|---------|------------|
| Long-term debt—GSWC | — | \$ 424,042 | — | \$ 424,042 |

Stock-Based Awards: AWR has issued stock-based awards to its employees under stock incentive plans. AWR has also issued stock-based awards to its Board of Directors under non-employee directors stock plans. Registrant applies the provisions in the accounting guidance for share-based payments in accounting for all of its stock-based awards. See Note 12 for further discussion.

Sales and Use Taxes: GSWC bills certain sales and use taxes levied by state or local governments to its customers. Included in these sales and use taxes are franchise fees, which GSWC pays to various municipalities (based on ordinances adopted by these municipalities) in order to use public rights of way for utility purposes. GSWC bills these franchise fees to its customers based on a CPUC-authorized rate for each rate-making area as applicable. These franchise fees, which are required to be paid regardless of GSWC's ability to collect them from its customers, are accounted for on a gross basis. GSWC's franchise fees billed to customers and recorded as operating revenue were approximately \$3.6 million, \$3.5 million and \$3.8 million for the years ended December 31, 2017, 2016 and 2015, respectively. When GSWC acts as an agent, and the tax is not required to be remitted if it is not collected from the customer, the taxes are accounted for on a net basis.

Depending on the state in which its subsidiary operations are conducted, ASUS is also subject to certain state non-income tax assessments generally computed on a "gross receipts" or "gross revenues" basis. These non-income tax assessments are required to be paid regardless of whether the subsidiary is reimbursed by the U.S. government for these assessments under its 50-year contracts, including modifications to these contracts. The non-income tax assessments are accounted for on a gross basis and totaled \$287,000, \$309,000 and \$367,000 during the years ended December 31, 2017, 2016 and 2015, respectively.

Recently Issued Accounting Pronouncements:

In March 2016, the Financial Accounting Standards Board ("FASB") issued Accounting Standard Update 2016-09, *Improvements to Employee Share-Based Payment Accounting*, which amends Accounting Standards Codification ("ASC") Topic 718, *Compensation - Stock Compensation*. Under the new guidance, the tax effects related to share-based payments at settlement (or expiration) are required to be recorded through the income statement rather than through equity, therefore

**AMERICAN STATES WATER COMPANY AND SUBSIDIARIES
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS**

increasing the volatility of income tax expense. The new standard also removed the requirement to delay recognition of a windfall tax benefit until an employer reduces its current taxes payable. It also permits entities to make an accounting policy election for the impact of forfeitures on the recognition of expense for share-based payment awards. Income tax benefits in excess of compensation costs or tax deficiencies for share-based compensation are recorded to the income tax provision, instead of to shareholders' equity, which can impact the effective tax rate. In addition, the excess tax benefits are classified as an operating activity along with other income tax cash flows on the statement of cash flows. Registrant adopted the new standard effective January 1, 2017 on a prospective basis and, therefore, all excess tax benefits resulting from share-based payments during the year ended December 31, 2017 were reflected in the income statements, which reduced income tax expense by approximately \$1,042,000 and \$1,011,000 for AWR and GSWC, respectively.

In May 2014, the FASB issued Accounting Standard Update 2014-09, *Revenue from Contracts with Customers (Topic 606)*. Under this guidance, an entity recognizes revenue when it transfers promised goods or services to customers in an amount that reflects what the entity expects in exchange for the goods or services. The guidance is effective for fiscal years, and interim periods within those years, beginning after December 15, 2017, and adoption is not permitted earlier than 2017. The guidance allows entities to select one of two methods of adoption, either the full retrospective approach, meaning the guidance would be applied to all periods presented, or modified retrospective approach, meaning the cumulative effect of applying the guidance to prior periods would be recognized as an adjustment to opening retained earnings at January 1, 2018, and requires certain additional disclosures. Registrant intends to use the modified retrospective approach beginning January 1, 2018. Registrant has completed its evaluation and has concluded that the adoption of this guidance will not have a material impact on its measurement or timing of revenue recognition. The guidance will also require enhanced disclosures, including a disaggregated revenue disclosure from contracts with customers. Some revenue arrangements which meet the definition of alternative revenue programs under ASC 980 *Regulated Operations*, such as GSWC's Water Revenue Adjustment Mechanism and Base Revenue Requirement Adjustment Mechanisms, are excluded from the scope of the new standard and, therefore, will be disclosed separately from the revenues of contracts with customers under the new guidance.

In March 2017, the FASB issued Accounting Standards Update 2017-07, *Compensation-Retirement Benefits (Topic 715): Improving the Presentation of Net Periodic Pension Cost and Net Periodic Postretirement Benefit Cost*, which changes the financial statement presentation for the costs of defined benefit pension plans and other retirement benefits. Under current U.S. GAAP, the components of net benefit cost for retirement plans (such as service cost, interest cost, expected return on assets, and the amortization of various deferred items), are aggregated as operating costs for financial statement presentation purposes. Under the new guidance, the service cost component will continue to be presented as operating costs, while all other components of net benefit cost will be presented outside of operating income. The new guidance also limits any capitalization of net periodic benefits cost to the service cost component. The new guidance is effective for annual and interim periods beginning after December 15, 2017, with early adoption permitted. Registrant does not expect adoption of this guidance to have a material impact on its consolidated financial statements. Registrant will adopt the new guidance beginning in 2018.

In August 2016, the FASB issued Accounting Standards Update 2016-15, *Statement of Cash Flows (Topic 230) Classification of Certain Cash Receipts and Cash Payments*, which is intended to reduce diversity in practice in how certain transactions are classified in the statement of cash flows. Registrant does not expect the adoption of this new guidance to have a significant impact on its cash flow statements. Registrant will adopt the new guidance beginning in 2018.

February 2016, the FASB issued a new lease accounting standard, *Leases (ASC 842)*. Under the new standard, lessees will recognize a right-of-use asset and a lease liability for virtually all leases (other than leases that meet the definition of a short-term lease). For income statement purposes, leases will be classified as either operating or finance. Operating leases will result in straight-line expense while finance leases will result in a front-loaded expense pattern. The standard is effective for fiscal years, and interim periods within those fiscal years, beginning after December 15, 2018. Registrant will use the practical expedients available under this standard and will not reassess: (i) whether any expired or existing contracts are or contain leases, (ii) the lease classification for any expired or existing leases, and (iii) any initial direct costs for existing leases, if any. Management has not yet determined the effect of the standard on Registrant's financial statements. However, the ultimate impact of adopting this standard will depend on Registrant's lease portfolio as of the adoption date.

AMERICAN STATES WATER COMPANY AND SUBSIDIARIES
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

Note 2 — Regulatory Matters

In accordance with accounting principles for rate-regulated enterprises, Registrant records regulatory assets, which represent probable future recovery of costs from customers through the ratemaking process, and regulatory liabilities, which represent probable future refunds that are to be credited to customers through the ratemaking process. At December 31, 2017, Registrant had approximately \$59.1 million of regulatory liabilities, net of regulatory assets, not accruing carrying costs. Of this amount, (i) \$83.2 million of regulatory liabilities relates to the creation of an excess deferred income tax liability brought about by a lower federal income tax rate as a result of the Tax Cuts and Jobs Act (see Note 10) that is expected to be refunded to customers, (ii) \$17.7 million relates to flow-through deferred income taxes including the gross-up portion on the deferred tax resulting from the aforementioned excess deferred income tax regulatory liability (also see Note 10), (iii) \$34.7 million of regulatory assets relates to the underfunded position in Registrant's pension and other post-retirement obligations (not including the two-way pension balancing accounts), and (iv) \$2.9 million of regulatory assets relates to a memorandum account authorized by the CPUC to track unrealized gains and losses on BVES's purchase power contracts over the term of the contracts. The remainder relates to other items that do not provide for or incur carrying costs.

Regulatory assets represent costs incurred by GSWC for which it has received or expects to receive rate recovery in the future. In determining the probability of costs being recognized in other periods, GSWC considers regulatory rules and decisions, past practices, and other facts or circumstances that would indicate if recovery is probable. If the CPUC determines that a portion of GSWC's assets are not recoverable in customer rates, GSWC must determine if it has suffered an asset impairment that requires it to write down the asset's value. Regulatory assets are offset against regulatory liabilities within each rate-making area. Amounts expected to be collected or refunded in the next twelve months have been classified as current assets and current liabilities by rate-making area. Regulatory assets, less regulatory liabilities, included in the consolidated balance sheets are as follows:

| (dollars in thousands) | December 31, | |
|--|--------------|------------|
| | 2017 | 2016 |
| GSWC | | |
| Water Revenue Adjustment Mechanism and Modified Cost Balancing Account | \$ 29,556 | \$ 47,340 |
| Costs deferred for future recovery on Aerojet case | 10,656 | 11,820 |
| Pensions and other post-retirement obligations (Note 11) | 33,019 | 28,118 |
| Derivative unrealized loss (Note 4) | 2,941 | 4,901 |
| Low income rate assistance balancing accounts | 5,972 | 8,272 |
| General rate case memorandum accounts | 10,522 | 13,929 |
| Other regulatory assets | 14,875 | 17,633 |
| Excess deferred income taxes (Note 10) | (83,231) | — |
| Flow-through taxes, net (Note 10) | (17,716) | 20,134 |
| Various refunds to customers | (4,552) | (5,866) |
| Total | \$ 2,042 | \$ 146,281 |

Alternative-Revenue Programs:

Under the Water Revenue Adjustment Mechanism ("WRAM"), GSWC records the difference between the adopted level of volumetric revenues as authorized by the CPUC for metered accounts (adopted volumetric revenues) and the actual volumetric revenues recovered in customer rates. While the WRAM tracks volumetric-based revenues, the revenue requirements approved by the CPUC include service charges, flat rate charges, and other items that are not subject to the WRAM. The adopted volumetric revenues consider the seasonality of consumption of water based upon historical averages. The variance between adopted volumetric revenues and actual billed volumetric revenues for metered accounts is recorded as a component of revenue with an offsetting entry to an asset or liability balancing account (tracked individually for each rate making area). The variance amount may be positive or negative and represents amounts that will be billed or refunded to customers in the future. The WRAM only applies to customer classes with conservation rates in place. The majority of GSWC's water customers have conservation rate structures.

Under the Modified Cost Balancing Account ("MCBA"), GSWC tracks adopted expense levels for purchased water, purchased power and pump taxes, as established by the CPUC. Variances (which include the effects of changes in both rate and volume) between adopted and actual purchased water, purchased power, and pump tax expenses are recorded as a component of the MCBA to be recovered from or refunded to GSWC's customers at a later date. This is reflected with an offsetting entry

AMERICAN STATES WATER COMPANY AND SUBSIDIARIES
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

to an asset or liability balancing account (tracked individually for each rate-making area). Unlike the WRAM, the MCBA applies to all customer classes.

The recovery or refund of the WRAM is netted against the MCBA over- or under-collection for the corresponding rate-making area and bears interest at the current 90-day commercial-paper rate. During the year ended December 31, 2017, \$33.7 million of pre-2017 WRAM/MCBA balances were recovered. During 2017, GSWC recorded an additional \$15.4 million net under-collection in the WRAM/MCBA. The majority of this balance represents an under-collection of supply costs incurred and recorded in the MCBA due to a higher volume of purchased water as compared to adopted. As of December 31, 2017, GSWC had an aggregated regulatory asset of \$29.6 million, which is comprised of a \$5.6 million under-collection in the WRAM accounts and a \$24.0 million under-collection in the MCBA accounts. GSWC is expected to file with the CPUC for recovery of the 2017 WRAM/MCBA balances in March 2018.

As required by the accounting guidance for alternative revenue programs, GSWC is required to collect its WRAM balances within 24 months following the year in which an under-collection is recorded. The CPUC has set the recovery period for under-collected WRAM balances that are up to 15% of adopted annual revenues at 18 months or less. For under-collected balances greater than 15%, the recovery period is 19 to 36 months. The recovery periods for the majority of GSWC's WRAM/MCBA balances are primarily within 12 to 24 months; however, there were some ratemaking areas that had recovery periods greater than 24 months. Based on the current CPUC-stipulated recovery periods, as of December 31, 2015, GSWC estimated that approximately \$1.4 million of its 2015 WRAM under-collection would not be collected within 24 months as required for revenue recognition under the accounting guidance for alternative revenue programs. As a result, during the fourth quarter of 2015, GSWC did not record \$1.4 million of the 2015 WRAM under-collection balance as revenue. This amount was recognized as revenue when it was determined that it would be collected within 24 months. Approximately \$910,000 of the 2015 WRAM was recognized in 2016, and the remaining \$510,000 was recognized in 2017.

Costs Deferred for Future Recovery:

The CPUC authorized a memorandum account to allow for the recovery of costs incurred by GSWC related to contamination lawsuits brought against Aerojet-General Corporation ("Aerojet") and the state of California. In July 2005, the CPUC authorized GSWC to recover approximately \$21.3 million of the Aerojet litigation memorandum account, through a rate surcharge, which will continue for no longer than 20 years. Beginning in October 2005, a surcharge went into effect to begin amortizing the memorandum account over a 20-year period.

Aerojet also agreed to reimburse GSWC \$17.5 million, plus interest accruing from January 1, 2004, for GSWC's past legal and expert costs, which is included in the Aerojet litigation memorandum account. The reimbursement of the \$17.5 million is contingent upon the issuance of land use approvals for development in a defined area within Aerojet property in Eastern Sacramento County and the receipt of certain fees in connection with such development. It is management's intention to offset any proceeds from the housing development by Aerojet in this area against the balance in this litigation memorandum account. At this time, management believes the full balance of the Aerojet litigation memorandum account will be collected either from customers or Aerojet.

Pensions and Other Postretirement Obligations:

A regulatory asset has been recorded at December 31, 2017 and 2016 for the costs that would otherwise be charged to "other comprehensive income" within shareholders' equity for the underfunded status of Registrant's pension and other postretirement benefit plans because the cost of these plans has historically been recovered through rates. As discussed in Note 11, as of December 31, 2017, Registrant's underfunded position for these plans that have been recorded as a regulatory asset totaled \$34.7 million. Registrant expects this regulatory asset to be recovered through rates in future periods.

Previous CPUC decisions in the water and electric general rate cases have authorized GSWC to use a two-way balancing account to track differences between the forecasted annual pension expenses adopted in rates and the actual annual expense to be recorded by GSWC in accordance with the accounting guidance for pension costs. The two-way balancing accounts bear interest at the current 90-day commercial paper rate. As of December 31, 2017, GSWC has a net \$1.7 million over-collection in the two-way pension balancing accounts, consisting of a \$588,000 over-collection related to the general office and water regions, and a \$1.1 million over-collection related to BVES.

Low Income Balancing Accounts:

This regulatory asset reflects primarily the costs of implementing and administering the California Alternate Rates for Water program in GSWC's water regions and the California Alternate Rate for Energy program in GSWC's BVES division. These programs mandated by the CPUC provide a discount of a fixed dollar amount which is intended to represent a 15%

AMERICAN STATES WATER COMPANY AND SUBSIDIARIES
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

discount based on a typical customer bill for qualified low-income water customers and 20% for qualified low-income electric customers. GSWC accrues interest on its low income balancing accounts at the prevailing rate for 90-day commercial paper. As of December 31, 2017, there is an aggregate \$6.0 million under-collection in the low income balancing accounts. Surcharges have been implemented to recover the costs included in these balancing accounts and are recalibrated in every water general rate case.

General Rate Case Memorandum Accounts:

The balance in the general rate case memorandum accounts represents the revenue differences between interim rates and final rates authorized by the CPUC due to delays in receiving decisions on various general rate case applications. On December 15, 2016, the CPUC issued a decision on GSWC's water general rate case, which set rates for the years 2016 - 2018. The rates approved by the CPUC were retroactive to January 1, 2016. As a result, as of December 31, 2016, GSWC added \$9.5 million to the general rate case memorandum accounts representing the rate difference between interim rates and final rates authorized by the CPUC, retroactive to January 1, 2016. As of December 31, 2017, there is a net aggregate \$10.5 million under-collection in these accounts, primarily related to the revenue difference between interim rates and final rates authorized by the CPUC in the December 2016 decision. GSWC has implemented surcharges ranging from 12 -36 months to collect the \$10.5 million balance.

Other Regulatory Assets:

Other regulatory assets represent costs incurred by GSWC for which it has received or expects to receive rate recovery in the future. These regulatory assets are supported by regulatory rules and decisions, past practices, and other facts or circumstances that indicate recovery is probable.

Other Regulatory Matters:

Renewables Portfolio Standard:

BVES is subject to the renewables portfolio standard ("RPS") law, which requires meeting certain targets of purchases of energy from qualified renewable energy resources. In December 2012, GSWC entered into an agreement with a third party to purchase renewable energy credits ("RECs") whereby GSWC agreed to purchase approximately 582,000 RECs over a 10 - year period, which would be used towards meeting the CPUC's RPS procurement requirements. As of December 31, 2017, GSWC has purchased sufficient RECs to be in compliance for all periods through 2017. Accordingly, no provision for loss or potential penalties has been recorded in the financial statements as of December 31, 2017. GSWC intends to file its 2017 compliance report with the CPUC by the August 2018 deadline. The cost of these RECs has been included as part of the electric supply cost balancing account as of December 31, 2017.

In October 2015, the governor of California signed a bill into law requiring, among other things, electric utilities to generate half of their electricity from renewable energy sources by 2030. The new requirement is in addition to the existing requirement for electric utilities to generate one third of their electricity from renewable sources by 2020. BVES is assessing various renewable energy opportunities to be in compliance with these requirements.

Formal Complaint Filed with the CPUC

In June 2016, a third party filed a formal complaint with the CPUC against GSWC about a water main break that occurred in 2014 causing damage to a commercial building. Repairs to the building were delayed for a variety of reasons, including a dispute and litigation between two of GSWC's insurance carriers regarding their respective coverage obligations, as well as questions as to the nature and extent of the building's damage and the costs associated therewith. The complaint filed with the CPUC requested, among other things, that the CPUC investigate the main break, the damage to the commercial building and the delay of its repairs, and order GSWC to complete repairs immediately. In September 2017, the CPUC dismissed the complaint on the grounds that the CPUC lacks jurisdiction to impose monetary damages for injuries to property, as requested by the third party, and the third party lacks standing with respect to the property as it is not the owner of the damaged property.

Previously, the owners of the commercial building filed suit in Ventura County Superior Court against GSWC for damages to the building. In September 2017, the Ventura County Superior Court issued a statement of decision in favor of the plaintiffs, and awarded damages to the plaintiffs in the amount of \$2.6 million. Subsequently, the Court also awarded the plaintiffs' attorney fees and other costs. In December 2017, GSWC entered into settlement agreements with its insurance carriers, as well as with the owners of the commercial building, resolving all disputes. The final resolution of this matter resulted in GSWC recording an immaterial charge to expense during the fourth quarter of 2017.

| Net utility plant | <u>\$ 1,204,992</u> | <u>\$ 1,150,926</u> | <u>\$ 1,197,940</u> | <u>\$ 1,145,311</u> |

- (1) Includes intangible assets of \$1.2 million for the years ended December 31, 2017 and 2016 for studies performed in association with the electricity segment of the Registrant's operations.

As of December 31, 2017 and 2016, intangible assets consist of the following:

| (dollars in thousands) | Weighted Average Amortization Period | AWR | | GSWC | |
|---|--|-----------------|-----------------|-----------------|-----------------|
| | | December 31, | | December 31, | |
| | | 2017 | 2016 | 2017 | 2016 |
| Intangible assets: | | | | | |
| Conservation programs | 3 years | \$ 9,486 | \$ 9,496 | \$ 9,486 | \$ 9,496 |
| Water and service rights (2) | 30 years | 8,695 | 8,695 | 8,124 | 8,124 |
| Water planning studies | 14 years | 13,011 | 19,487 | 13,011 | 19,487 |
| Total intangible assets | | <u>31,192</u> | <u>37,678</u> | <u>30,621</u> | <u>37,107</u> |
| Less — accumulated amortization | | (23,331) | (28,108) | (23,221) | (28,001) |
| Intangible assets, net of amortization | | <u>\$ 7,861</u> | <u>\$ 9,570</u> | <u>\$ 7,400</u> | <u>\$ 9,106</u> |
| Intangible assets not subject to amortization (3) | | <u>\$ 422</u> | <u>\$ 427</u> | <u>\$ 404</u> | <u>\$ 409</u> |

- (2) Includes intangible assets of \$571,000 for contracted services included in "Other Property and Investments" on the consolidated balance sheets as of December 31, 2017 and 2016.

- (3) The intangible assets not subject to amortization primarily consist of organization and consent fees.

For the years ended December 31, 2017, 2016 and 2015, amortization of intangible assets was \$1.5 million, \$1.9 million and \$1.8 million, respectively, for both AWR and GSWC.

AMERICAN STATES WATER COMPANY AND SUBSIDIARIES Page 345 of 2101
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

Estimated future consolidated amortization expenses related to intangible assets for the succeeding five years are (in thousands):

| | Amortization Expense |
|-------|---------------------------------|
| 2018 | \$ 1,325 |
| 2019 | 1,131 |
| 2020 | 1,003 |
| 2021 | 949 |
| 2022 | 949 |
| Total | \$ 5,357 |

There is no material difference between the consolidated operations of AWR and the operations of GSWC in regard to the future amortization expense of intangible assets.

Asset Retirement Obligations:

The following is a reconciliation of the beginning and ending aggregate carrying amount of asset retirement obligations, which are included in "Other Credits" on the balance sheets as of December 31, 2017 and 2016:

| (dollars in thousands) | GSWC |
|---------------------------------|-------------|
| Obligation at December 31, 2015 | \$ 4,157 |
| Additional liabilities incurred | 121 |
| Liabilities settled | (112) |
| Accretion | 227 |
| Obligation at December 31, 2016 | \$ 4,393 |
| Additional liabilities incurred | 562 |
| Liabilities settled | (229) |
| Accretion | 237 |
| Obligation at December 31, 2017 | \$ 4,963 |

Note 4 — Derivative Instruments

GSWC's electric division, BVES, purchases power under long-term contracts at a fixed cost depending on the amount of power and the period during which the power is purchased under such contracts. In December 2014, the CPUC approved an application that allowed BVES to enter into long-term purchased power contracts with energy providers, which BVES executed in December 2014. BVES began taking power under these long-term contracts effective January 1, 2015 at a fixed cost over three and five year terms depending on the amount of power and period during which the power is purchased under the contracts.

The long-term contracts executed in December 2014 are subject to the accounting guidance for derivatives and require mark-to-market derivative accounting. Among other things, the CPUC also authorized BVES to establish a regulatory asset and liability memorandum account to offset the mark-to-market entries required by the accounting guidance. Accordingly, all unrealized gains and losses generated from the purchased power contracts executed in December 2014 are deferred on a monthly basis into a non-interest bearing regulatory memorandum account that tracks the changes in fair value of the derivative throughout the term of the contract. As a result, these unrealized gains and losses do not impact GSWC's earnings. The three-year contract expired on December 31, 2017. As of December 31, 2017, there was a \$2.9 million unrealized loss in the memorandum account, with a corresponding unrealized loss liability for the five-year purchased power contract as a result of the fixed prices being greater than the futures energy prices. The notional volume of derivatives remaining under this long-term contract as of December 31, 2017 was approximately 201,000 megawatt hours.

As previously discussed in Note 1, the accounting guidance for fair value measurements establishes a framework for measuring fair value and requires fair value measurements to be classified and disclosed in one of three levels. Registrant's valuation model utilizes various inputs that include quoted market prices for energy over the duration of the contract. The market prices used to determine the fair value for this derivative instrument were estimated based on independent sources such as broker quotes and publications that are not observable in or corroborated by the market. Registrant received one broker quote to determine the fair value of its derivative instrument. When such inputs have a significant impact on the measurement

AMERICAN STATES WATER COMPANY AND SUBSIDIARIES
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

of fair value, the instrument is categorized as Level 3. Accordingly, the valuation of the derivative on Registrant's purchased power contract has been classified as Level 3 for all periods presented. The following table presents changes in the fair value of GSWC's derivatives for the years ended December 31, 2017 and 2016:

| <u>(dollars in thousands)</u> | <u>2017</u> | <u>2016</u> |
|--|-------------------|-------------------|
| Balance, at beginning of the period | \$ (4,901) | \$ (7,053) |
| Unrealized gain on purchased power contracts | 1,960 | 2,152 |
| Balance, at end of the period | <u>\$ (2,941)</u> | <u>\$ (4,901)</u> |

Note 5 — Military Privatization

Each of the Military Utility Privatization Subsidiaries have entered into a service contract with the U.S. government to operate and maintain, as well as perform construction activities to renew and replace, the water and/or wastewater systems at a military base or bases. The amounts charged for these services are based upon the terms of the 50-year contract between ASUS or the Military Utility Privatization Subsidiaries and the U.S. government. Under the terms of each of these agreements, the Military Utility Privatization Subsidiaries agree to operate and maintain the water and/or wastewater systems for: (i) a monthly net fixed-price for operation and maintenance, and (ii) an amount to cover renewal and replacement capital work. In addition, these contracts may also include firm, fixed-priced initial capital upgrade projects to upgrade the existing infrastructure. Contract modifications are also issued for other necessary capital upgrades to the existing infrastructure approved by the U.S. government.

Under the terms of each of these contracts, prices are subject to an economic price adjustment ("EPA") provision, on an annual basis. Prices may also be equitably adjusted for changes in law and other circumstances. ASUS is permitted to file, and has filed, requests for equitable adjustment. Each of the contracts may be subject to termination, in whole or in part, prior to the end of the 50-year term for convenience of the U.S. government or as a result of default or nonperformance by the Military Utility Privatization Subsidiaries.

In September 2017, ASUS was awarded a new 50-year contract by the U.S. government to operate, maintain, and provide construction management services for the water distribution and wastewater collection and treatment facilities at Fort Riley, a United States Army installation located in Kansas. ASUS expects to assume operations at Fort Riley following the completion of a 6-to-12-month transition period currently underway. ASUS assumed the operation of the water and wastewater systems at Eglin Air Force Base on June 15, 2017.

ASUS has experienced delays in receiving EPAs as provided for under its 50-year contracts. Because of the delays, EPAs, when finally approved, are retroactive. During 2017, the U.S. government approved EPAs at five of the bases served. In some cases, these EPAs included retroactive operation and maintenance management fees for prior periods. In the second quarter of 2017, ASUS recorded approximately \$1.0 million in retroactive operation and maintenance management fees and pretax operating income related to periods prior to 2017. In December 2016, ASUS recorded approximately \$421,000 in retroactive operation and maintenance management fees and pretax operating income related to periods prior to 2016.

Costs and estimated earnings on contracts and amounts due from the U.S. government as of December 31, 2017 and 2016 are as follows:

| <u>(dollars in thousands)</u> | <u>2017</u> | <u>2016</u> |
|--|------------------|------------------|
| Revenues (costs and estimated earnings) recognized on contracts | \$ 78,245 | \$ 104,830 |
| Less: Billings to date on contracts | (15,343) | (43,161) |
| | <u>\$ 62,902</u> | <u>\$ 61,669</u> |
| <u>Included in the accompanying balance sheets under the following captions:</u> | | |
| Costs and estimated earnings in excess of billings on contracts | \$ 66,813 | \$ 63,932 |
| Billings in excess of costs and estimated earnings on contracts | (3,911) | (2,263) |
| | <u>\$ 62,902</u> | <u>\$ 61,669</u> |
| <u>Receivables from the U.S. government:</u> | | |
| Billed receivables from the U.S. government | \$ 3,725 | \$ 8,467 |
| Unbilled receivables from the U.S. government (current) | 7,559 | 6,691 |
| Total | <u>\$ 11,284</u> | <u>\$ 15,158</u> |

AMERICAN STATES WATER COMPANY AND SUBSIDIARIES
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

Note 6 — Earnings Per Share and Capital Stock

In accordance with the accounting guidance for participating securities and earnings per share (“EPS”), Registrant uses the “two-class” method of computing EPS. The “two-class” method is an earnings allocation formula that determines EPS for each class of common stock and participating security. AWR has participating securities related to restricted stock units that earn dividend equivalents on an equal basis with AWR’s Common Shares that have been issued under AWR’s 2000, 2008 and 2016 employee plans, and the 2003 and 2013 directors’ plans. In applying the “two-class” method, undistributed earnings are allocated to both common shares and participating securities.

The following is a reconciliation of Registrant’s net income and weighted average Common Shares outstanding for calculating basic net income per share:

| Basic: (in thousands, except per share amounts) | For The Years Ended December 31, | | |
|--|---|---------------|---------------|
| | 2017 | 2016 | 2015 |
| Net income | \$ 69,367 | \$ 59,743 | \$ 60,484 |
| Less: (a) Distributed earnings to common shareholders | 36,417 | 33,408 | 32,690 |
| Distributed earnings to participating securities | 197 | 187 | 207 |
| Undistributed earnings | 32,753 | 26,148 | 27,587 |
| (b) Undistributed earnings allocated to common shareholders | 32,577 | 26,003 | 27,414 |
| Undistributed earnings allocated to participating securities | 176 | 145 | 173 |
| Total income available to common shareholders, basic (a)+(b) | \$ 68,994 | \$ 59,411 | \$ 60,104 |
| Weighted average Common Shares outstanding, basic | 36,638 | 36,552 | 37,389 |
| Basic earnings per Common Share | \$ 1.88 | \$ 1.63 | \$ 1.61 |

Diluted EPS is based upon the weighted average number of Common Shares, including both outstanding shares and shares potentially issuable in connection with stock options and restricted stock units granted under AWR’s 2000, 2008 and 2016 employee plans, and the 2003 and 2013 directors’ plans, and net income. At December 31, 2017, there were 69,202 stock options outstanding under the 2000 and 2008 employee stock option plans. As of January 28, 2018, all stock options remaining outstanding under the 2000 plan were canceled in accordance with the terms of the 2000 plan. At December 31, 2017, there were also 205,166 restricted stock units outstanding including performance shares awarded to officers of the Registrant.

The following is a reconciliation of Registrant’s net income and weighted average Common Shares outstanding for calculating diluted net income per share:

| Diluted: (in thousands, except per share amounts) | For The Years Ended December 31, | | |
|--|---|-------------|-------------|
| | 2017 | 2016 | 2015 |
| Common shareholders earnings, basic | \$ 68,994 | \$ 59,411 | \$ 60,104 |
| Undistributed earnings for dilutive stock options and restricted stock units | 176 | 145 | 173 |
| Total common shareholders earnings, diluted | \$ 69,170 | \$ 59,556 | \$ 60,277 |
| Weighted average Common Shares outstanding, basic | 36,638 | 36,552 | 37,389 |
| Stock-based compensation (1) | 206 | 198 | 225 |
| Weighted average Common Shares outstanding, diluted | 36,844 | 36,750 | 37,614 |
| Diluted earnings per Common Share | \$ 1.88 | \$ 1.62 | \$ 1.60 |

(1) In applying the treasury stock method of reflecting the dilutive effect of outstanding stock-based compensation in the calculation of diluted EPS, 69,202 stock options and 205,166 restricted stock units, including performance awards, at December 31, 2017 were deemed to be outstanding in accordance with accounting guidance on earnings per share.

AMERICAN STATES WATER COMPANY AND SUBSIDIARIES
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

During the years ended December 31, 2017, 2016 and 2015, AWR issued Common Shares totaling 56,498, 56,900 and 53,612, respectively, under AWR's employee stock incentive plans and the non-employee directors' plans. In addition, during the years ended December 31, 2017, 2016 and 2015, AWR issued 52,936, 12,546 and 66,458 Common Shares for approximately \$909,000, \$235,000 and \$1,198,000, respectively, as a result of the exercise of stock options. During 2017, 2016 and 2015, no cash proceeds received by AWR as a result of the exercise of stock options were distributed to any of AWR's subsidiaries. AWR has not issued any Common Shares during 2017, 2016 and 2015 under AWR's Common Share Purchase and Dividend Reinvestment Plan ("DRP") and the 401(k) Plan. Shares reserved for the 401(k) Plan are in relation to AWR's matching contributions and investment by participants. As of December 31, 2017, there were 1,055,948 and 387,300 Common Shares authorized for issuance directly by AWR but unissued under the DRP and the 401(k) Plan, respectively.

In 2014 and 2015, AWR's Board of Directors approved two stock repurchase programs, authorizing AWR to repurchase up to 2.45 million shares of its Common Shares. Both programs were completed during 2015. Under these programs, Registrant repurchased 1,905,000 Common Shares on the open market during 2015.

GSWC's outstanding Common Shares are owned entirely by its parent, AWR. To the extent GSWC does not reimburse AWR for stock-based compensation awarded under various stock compensation plans, such amounts increase the value of GSWC's common shareholder's equity.

Note 7 — Dividend Limitations

GSWC is subject to contractual restrictions on its ability to pay dividends. GSWC's maximum ability to pay dividends is restricted by certain Note Agreements to the sum of \$21.0 million plus 100% of consolidated net income from various dates plus the aggregate net cash proceeds received from capital stock offerings or other instruments convertible into capital stock from various dates. Under the most restrictive of the Note Agreements, \$400.8 million was available to pay dividends to AWR as of December 31, 2017. GSWC is also prohibited from paying dividends if, after giving effect to the dividend, its total indebtedness to capitalization ratio (as defined) would be more than 0.6667-to-1. Dividends in the amount of \$27.7 million, \$25.5 million and \$62.0 million were paid to AWR by GSWC during the years ended December 31, 2017, 2016 and 2015, respectively.

The ability of AWR, ASUS and GSWC to pay dividends is also restricted by California law. Under California law, AWR, GSWC and ASUS are each permitted to distribute dividends to its shareholders so long as the Board of Directors determines, in good faith, that either: (i) the value of the corporation's assets equals or exceeds the sum of its total liabilities immediately after the dividend, or (ii) its retained earnings equals or exceeds the amount of the distribution. Under the least restrictive of the California tests, approximately \$279.8 million was available to pay dividends to AWR's shareholders at December 31, 2017. Approximately \$232.2 million was available for GSWC to pay dividends to AWR at December 31, 2017. Approximately \$62.0 million was available for ASUS to pay dividends to AWR as of December 31, 2017 to the extent that the subsidiaries of ASUS are able to pay dividends in that amount to ASUS under applicable state laws.

Note 8 — Bank Debt

AWR has access to a \$150.0 million syndicated credit facility, which expires in May 2018. Management intends to renew the credit facility prior to its expiration. The aggregate effective amount that may be outstanding under letters of credit is \$25.0 million. AWR has obtained letters of credit, primarily for GSWC, in the aggregate amount of \$6.3 million, with fees of 0.65% including: (i) a \$5.4 million letter of credit related to American Recovery and Reinvestment Act funds received by GSWC for reimbursement of capital costs related to the installation of meters in GSWC's Arden-Cordova water system, (ii) letters of credit in an aggregate amount of \$340,000 as security for GSWC's business automobile insurance policy, (iii) a letter of credit, in an amount of \$585,000 as security for the purchase of power, and (iv) a \$15,000 irrevocable letter of credit pursuant to a franchise agreement with the City of Rancho Cordova. Letters of credit outstanding reduce the amount that may be borrowed under the revolving credit facility. AWR is not required to maintain any compensating balances.

Loans may be obtained under this credit facility at the option of AWR and bear interest at rates based on credit ratings and Euro rate margins. In May 2017, Standard and Poor's Global Ratings ("S&P") reaffirmed an A+ credit rating with a stable outlook on both AWR and GSWC. S&P's debt ratings range from AAA (highest rating possible) to D (obligation is in default). In December 2017, Moody's Investors Service ("Moody's") affirmed its A2 rating with a revised rating outlook from stable to positive for GSWC.

At December 31, 2017, there was \$59.0 million outstanding under this facility. At times, AWR borrows under this facility and provides loans to its subsidiaries in support of their operations, on terms that are similar to that of the credit facility.

AMERICAN STATES WATER COMPANY AND SUBSIDIARIES
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

AWR's short-term borrowing activities (excluding letters of credit) for the years ending December 31, 2017 and 2016 were as follows:

| <u>(in thousands, except percent)</u> | December 31, | |
|---------------------------------------|--------------|-----------|
| | 2017 | 2016 |
| Balance Outstanding at December 31, | \$ 59,000 | \$ 90,000 |
| Interest Rate at December 31, | 2.28% | 1.46% |
| Average Amount Outstanding | \$ 65,242 | \$ 59,261 |
| Weighted Average Annual Interest Rate | 1.69% | 1.20% |
| Maximum Amount Outstanding | \$ 102,500 | \$ 96,000 |

All of the letters of credit are issued pursuant to the syndicated revolving credit facility. The syndicated revolving credit facility contains restrictions on prepayments, disposition of property, mergers, liens and negative pledges, indebtedness and guaranty obligations, transactions with affiliates, minimum interest coverage requirements, a maximum debt to capitalization ratio and a minimum debt rating. Pursuant to the credit agreement, AWR must maintain a minimum interest coverage ratio of 3.25 times interest expense, a maximum total funded debt ratio of 0.65 to 1.00 and a minimum Moody's Investor Service or S&P debt rating of Baa3 or BBB-, respectively. As of December 31, 2017, 2016 and 2015, AWR was in compliance with these requirements. As of December 31, 2017, AWR had an interest coverage ratio of 7.54 times interest expense, a debt ratio of 0.42 to 1.00 and a debt rating of A+ by S&P.

Note 9 — Long-Term Debt

Registrant's long-term debt consists primarily of notes and debentures of GSWC. Registrant summarizes its long-term debt in the Statements of Capitalization. GSWC does not currently have any outstanding mortgages or other encumbrances on its properties. GSWC's leases and other similar financial arrangements are not material.

Each of the private placement notes issued by GSWC contain various restrictions. Private placement notes issued in the amount of \$28 million due in 2031 contain restrictions on the payment of dividends, minimum interest coverage requirements, a maximum total indebtedness to capitalization ratio and a negative pledge. Pursuant to the terms of these notes, GSWC must maintain a minimum interest coverage ratio of two times interest expense. As of December 31, 2017, GSWC had an interest coverage ratio of over four times interest expense.

In December 2014, GSWC issued \$15.0 million in 3.45% private placement senior notes due in 2029. In 2005 and 2009, GSWC issued two senior private placement notes to CoBank, ACB ("CoBank") due in 2028 and 2019, respectively. Pursuant to the terms of these three notes, GSWC must maintain a total indebtedness to capitalization ratio (as defined) of less than 0.6667-to-1 and a total indebtedness to earnings before income taxes, depreciation and amortization ("EBITDA") of less than 8-to-1. As of December 31, 2017, GSWC had a total indebtedness to capitalization ratio of 0.4332-to-1 and a total indebtedness to EBITDA of 2.5-to-1.

Certain long-term debt issues outstanding as of December 31, 2017 can be redeemed, in whole or in part, at the option of GSWC subject to redemption schedules embedded in the agreements particular to each redeemable issue. The 9.56% notes are subject to a make-whole premium based on 55 basis points above the applicable Treasury Yield if redeemed prior to 2021. After 2021, the maximum redemption premium is 3% of par value. The 5.87% and 6.7% senior notes with Co-Bank are subject to a make-whole premium based on the difference between Co-Bank's cost of funds on the date of purchase and Co-Bank's cost of funds on the date of redemption, plus 0.5%. The \$15.0 million, 3.45% senior notes due in 2029 have similar redemption premiums.

In October 2009, GSWC entered into an agreement with the California Department of Health ("CDPH") whereby CDPH agreed to provide funds to GSWC of up to \$9.0 million under the American Recovery and Reinvestment Act. Proceeds from the funds received were used to reimburse GSWC for capital costs incurred to install water meters to convert customers in GSWC's Arden-Cordova district from non-metered service to metered service. GSWC received a total of \$8.6 million in reimbursements from the CDPH, half of which was recorded as a contribution in aid of construction and the other half as long-term debt in accordance with the terms of the agreement. The loan portion bears interest at a rate of 2.5% and is payable over 20 years beginning in 2013. A surcharge to recover from customers the debt service cost on this loan was approved by the CPUC and implemented in 2013. Pursuant to the agreement, GSWC also issued letters of credit to CDPH in connection with this loan. As of December 31, 2017, GSWC has a total of \$5.4 million in letters of credit issued to CDPH.

AMERICAN STATES WATER COMPANY AND SUBSIDIARIES
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

Annual maturities of all long-term debt at December 31, 2017 are as follows (in thousands):

| | <u>Maturity as of December 31,</u> |
|------------|--|
| 2018 | \$ 324 |
| 2019 | 40,321 |
| 2020 | 345 |
| 2021 | 366 |
| 2022 | 389 |
| Thereafter | 283,520 |
| Total | <u>\$ 325,265</u> |

Note 10 — Taxes on Income

Registrant records deferred income taxes for temporary differences pursuant to the accounting guidance that addresses items recognized for income tax purposes in a different period from when these items are reported in the financial statements. These items include differences in net asset basis (primarily related to differences in depreciation lives and methods, and differences in capitalization methods) and the treatment of certain regulatory balancing accounts and construction contributions and advances. The accounting guidance for income taxes requires that rate-regulated enterprises record deferred income taxes and offsetting regulatory liabilities and assets for temporary differences where the rate regulator has prescribed flow-through treatment for ratemaking purposes (Note 2). Deferred investment tax credits ("ITC") are amortized ratably to deferred tax expense over the remaining lives of the property that gave rise to these credits.

GSWC is included in both AWR's consolidated federal income tax and its combined California state franchise tax returns. The impact of California's unitary apportionment on the amount of AWR's California income tax liability is a function of both the profitability of AWR's non-California activities and the proportion of AWR's California sales to its total sales. GSWC's income tax expense is computed as if GSWC were autonomous and separately files its income tax returns, which is consistent with the method adopted by the CPUC in setting GSWC's customer rates.

The AWR and GSWC effective tax rates ("ETRs") differ from the federal statutory tax rate primarily due to state taxes, flow-through items, and permanent differences. As a regulated utility, GSWC treats certain temporary differences as flow-through in computing its income tax expense consistent with the income tax method used in its CPUC-jurisdiction ratemaking. Flow-through items either increase or decrease tax expense and thus impact the ETR.

On December 22, 2017, the Tax Cuts and Jobs Act (the "Tax Act") was signed into federal law. The provisions of this major tax reform are generally effective January 1, 2018. Among its significant provisions, the Tax Act (i) reduces the federal corporate income tax rate from 35% to 21%; (ii) eliminates bonus depreciation for regulated utilities, but allows 100% expensing for the cost of qualified property for non-regulated businesses; (iii) eliminates the provision that treated contributions in aid of construction provided to regulated water utilities as non-taxable; (iv) eliminates the domestic production activities deduction, and (v) limits the amount of net interest that can be deducted; however, this limitation is not applicable to regulated utilities and, therefore is not anticipated to have a material impact to Registrant's ability to deduct net interest.

Pursuant to ASC Topic 740, "Income Taxes", the effects of changes in tax laws must be recognized within the period in which the tax law is enacted. This required AWR and GSWC to record an adjustment in its 2017 financial statements to reflect the impact of the reduction in the corporate income tax rate from 35% to 21% on its cumulative deferred income-tax balances and its tax-related regulatory assets/liabilities. Registrant was able to make reasonable estimates in order to remeasure and account for the effects of the Tax Act, which are reflected in the December 31, 2017 financial statements. Any further technical corrections or other forms of guidance addressing the Tax Act, as well as regulatory or governmental actions, could result in adjustments to Registrant's remeasurement and accounting for the effects of the Tax Act. Registrant will finalize and record any adjustments related to the Tax Act within the one-year measurement period provided under Staff Accounting Bulletin No. 118 issued by the Securities and Exchange Commission in December 2017.

The most significant change from the Tax Act impacting Registrant is the reduction of the corporate federal income tax rate from 35% to 21% effective January 1, 2018. As of December 31, 2017, the cumulative net deferred income tax liabilities (for both flow-through and normalized temporary differences) related to GSWC's rate-regulated activities were reduced by approximately \$90.1 million to reflect the new 21% tax rate. However, this did not impact GSWC's earnings since

AMERICAN STATES WATER COMPANY AND SUBSIDIARIES
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

this reduction in net deferred income tax liabilities was offset by a corresponding increase to a regulatory liability (Note 2). The impact to future customer rates related to this regulatory liability is anticipated to generally occur over a period consistent with the remaining lives of the property giving rise to this regulatory liability. The remeasurement of other deferred income tax balances not related to rate-regulated activities did not have a significant impact to Registrant's consolidated results of operations; however, income tax expense was affected among the reporting segments.

The significant components of the deferred tax assets and liabilities as reflected in the balance sheets at December 31, 2017 and 2016 are:

| (dollars in thousands) | AWR | | GSWC | |
|---|---------------------|---------------------|---------------------|---------------------|
| | December 31, | | December 31, | |
| | 2017 | 2016 | 2017 | 2016 |

AMERICAN STATES WATER COMPANY AND SUBSIDIARIES
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

AWR and GSWC had no unrecognized tax benefits at December 31, 2017, 2016 and 2015.

Registrant's policy is to classify interest on income tax over/underpayments in interest income/expense and penalties in "other operating expenses." Registrant did not have any material interest receivables/payables from/to taxing authorities as of December 31, 2017 and 2016, nor did it recognize any material interest income/expense or accrue any material tax-related penalties during the years ended December 31, 2017, 2016 and 2015.

Registrant files federal, California and various other state income tax returns. The Internal Revenue Service ("IRS") completed its examination of AWR's federal 2010 through 2012 refund claims in February 2016 and issued a refund to AWR of approximately \$2.1 million. AWR's 2014 - 2016 tax years remain subject to examination by the IRS. AWR filed refund claims with the California Franchise Tax Board ("FTB") for the 2002 through 2008 tax years in connection with the matters reflected on the federal refund claims along with other state tax items. In the first quarter of 2017, the FTB issued a refund to AWR for the 2002 - 2004 claims of approximately \$2.2 million. The FTB continues to review the 2005 - 2008 refund claims. The 2009 - 2016 tax years remain subject to examination by the FTB.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

Note 11 — Employee Benefit Plans***Pension and Post-Retirement Medical Plans:***

Registrant maintains a defined benefit pension plan (the “Pension Plan”) that provides eligible employees (those aged 21 and older, hired before January 1, 2011) monthly benefits upon retirement based on average salaries and length of service. The eligibility requirement to begin receiving these benefits is 5 years of vested service. The normal retirement benefit is equal to 2% of the five highest consecutive years’ average earnings multiplied by the number of years of credited service, up to a maximum of 40, reduced by a percentage of primary social security benefits. There is also an early retirement option. Annual contributions are made to the Pension Plan, which comply with the funding requirements of the Employee Retirement Income Security Act (“ERISA”). At December 31, 2017, Registrant had 949 participants in the Pension Plan.

Employees hired or rehired after December 31, 2010 are eligible to participate in a defined contribution plan. Registrant's existing 401(k) Investment Incentive Program was amended to include this defined contribution plan. Under this plan, Registrant provides a contribution of 5.25% of eligible pay each pay period into investment vehicles offered by the plan’s trustee. Full vesting under this plan occurs upon three years of service. Employees hired before January 1, 2011 continue to participate in and accrue benefits under the terms of the Pension Plan.

Registrant also provides post-retirement medical benefits for all active employees hired before February of 1995 through a medical insurance plan. Eligible employees, who retire prior to age 65, and/or their spouses, are able to retain the benefits under the plan for active employees until reaching age 65. Eligible employees upon reaching age 65, and those eligible employees retiring at or after age 65, and/or their spouses, receive coverage through a Medicare supplement insurance policy paid for by Registrant subject to an annual cap limit. Registrant’s post-retirement medical plan does not provide prescription drug benefits to Medicare-eligible employees and is not affected by the Medicare Prescription Drug Improvement and Modernization Act of 2003.

In accordance with the accounting guidance for the effects of certain types of regulation, Registrant has established a regulatory asset for its underfunded position in its pension and post-retirement medical plans that is expected to be recovered through rates in future periods. The changes in actuarial gains and losses, prior service costs and transition assets or obligations pertaining to the regulatory asset are recognized as an adjustment to the regulatory asset account as these amounts are recognized as components of net periodic pension costs each year and in the rate-making process.

The following table sets forth the Pension Plan’s and post-retirement medical plan’s funded status and amounts recognized in Registrant’s balance sheets and the components of net pension cost and accrued liability at December 31, 2017 and 2016:

| (dollars in thousands) | Pension Benefits | | Post-Retirement Medical Benefits | |

AMERICAN STATES WATER COMPANY AND SUBSIDIARIES
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

Consistent with decisions from the CPUC and in accordance with regulatory accounting principles, Registrant capitalizes a portion of its pension and other post-retirement costs in the overhead pool included in GSWC's utility plant. The components of net periodic pension and post-retirement benefits cost, before allocation to the overhead pool, for 2017, 2016 and 2015 are as follows:

| (dollars in thousands, except percent) | Pension Benefits | | | Post-Retirement Medical Benefits | | |
|---|------------------|----------|----------|-------------------------------------|----------|----------|
| | 2017 | 2016 | 2015 | 2017 | 2016 | 2015 |
| Components of Net Periodic Benefits Cost: | | | | | | |
| Service cost | \$ 4,999 | \$ 5,094 | \$ 6,276 | \$ 227 | \$ 247 | \$ 340 |
| Interest cost | 7,904 | 7,910 | 7,686 | 324 | 371 | 435 |

| Weighted-average assumptions used to determine net periodic cost: | | | | | | |
| Discount rate | 4.44% | 4.65% | 4.25% | 3.97% | 4.25% | 3.80% |
| Expected long-term return on plan assets | 6.50% | 7.00% | 7.00% | * | * | * |
| Rate of compensation increase | ** | ** | 4.00% | N/A | N/A | N/A |

*6.0% for union plan and 4.2% for non-union (net of income taxes) in 2017, and 7.00% for union plan and 4.20% for non-union (net of income taxes) for 2016 and 2015.

** Age-graded ranging from 3.0% to 8.0%.

Regulatory Adjustment:

The CPUC authorized GSWC to track differences between the forecasted annual pension expenses adopted in rates for its water and electric regions and the general office, and the actual annual expense to be recorded by GSWC in accordance with the accounting guidance for pension costs. During the years ended December 31, 2017, 2016, and 2015, GSWC's actual expense was lower than the amounts included in water and electric customer rates by \$583,000, \$859,000 and \$523,000, respectively. These annual over-collections have been recorded in the two-way pension balancing accounts included within regulatory assets. As of December 31, 2017, the pension balancing account had a \$1.7 million cumulative net over-collection included within regulatory assets (Note 2).

Plan Funded Status:

The Pension Plan was underfunded at December 31, 2017 and 2016. Registrant's market related value of plan assets is equal to the fair value of plan assets. Past volatile market conditions have affected the value of GSWC's trust established to fund its future long-term pension benefits. These benefit plan assets and related obligations are measured annually using a December 31 measurement date. Changes in the Pension Plan's funded status will affect the assets and liabilities recorded on the balance sheet in accordance with accounting guidance on employers' accounting for defined benefit pension and other post-retirement plans. Due to Registrant's regulatory recovery treatment, the recognition of the underfunded status for the Pension Plan has been offset by a regulatory asset pursuant to guidance on the accounting for the effects of certain types of regulation.

AMERICAN STATES WATER COMPANY AND SUBSIDIARIES
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

Plan Assets:

The assets of the pension and post-retirement medical plans are managed by a third party trustee. The investment policy allocation of the assets in the trust was approved by Registrant's Administrative Committee (the "Committee") for the pension and post-retirement medical funds, which has oversight responsibility for all retirement plans. The primary objectives underlying the investment of the pension and post-retirement plan assets are: (i) attempt to maintain a fully funded status with a cushion for unexpected developments, possible future increases in expense levels, and/or a reduction in the expected return on investments, (ii) seek to earn long-term returns that compare favorably to appropriate market indexes, peer group universes and the policy asset allocation index, (iii) seek to provide sufficient liquidity to pay current benefits and expenses, (iv) attempt to limit risk exposure through prudent diversification, and (v) seek to limit costs of administering and managing the plans.

The Committee recognizes that risk and volatility are present to some degree with all types of investments. High levels of risk may be avoided through diversification by asset class, style of each investment manager and sector and industry limits. Investment managers are retained to manage a pool of assets and allocate funds in order to achieve an appropriate, diversified and balanced asset mix. The Committee's strategy balances the requirement to maximize returns using potentially higher-return generating assets, such as equity securities, with the need to control the risk of its benefit obligations with less volatile assets, such as fixed-income securities.

The Committee approves the target asset allocations. Registrant's pension and post-retirement plan weighted-average asset allocations at December 31, 2017 and 2016, by asset category are as follows:

| Asset Category | Pension Benefits | | Post-Retirement Medical Benefits | |
|---|------------------|------|----------------------------------|------|
| | 2017 | 2016 | 2017 | 2016 |
| <u>Actual Asset Allocations:</u> | | | | |
| Equity securities | 57% | 57% | 59% | 58% |
| Debt securities | 39% | 38% | 37% | 39% |
| Real Estate Funds | 4% | 5% | —% | —% |
| Cash equivalents | —% | —% | 4% | 3% |
| Total | 100% | 100% | 100% | 100% |

Equity securities did not include AWR's Common Shares as of December 31, 2017 and 2016.

| Target Asset Allocations for 2017: | Pension Benefits | | Post-retirement Medical Benefits | |
|------------------------------------|------------------|--|----------------------------------|------|
| | | | | |
| Equity securities | | | 60% | 60% |
| Debt securities | | | 40% | 40% |
| Total | | | 100% | 100% |

The Pension Plan assets are in collective trust funds managed by a management firm appointed by the Committee. The fair value of these collective trust funds is measured using net asset value per share. In accordance with ASU 2015-07 *Disclosures for Investments in Certain Entities that Calculate Net Asset Value per Share (or Its Equivalents)*, the fair value of the collective trust funds is not categorized in the fair value hierarchy as of December 31, 2017 and 2016.

AMERICAN STATES WATER COMPANY AND SUBSIDIARIES Page 358 of 2101
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

The following tables set forth the fair value, measured by net asset value, of the pension investment assets as of December 31, 2017 and 2016:

| Net Asset Value as of December 31, 2017 | | | | |
|---|------------|----------------------|----------------------|--------------------------|
| (dollars in thousands) | Fair Value | Unfunded Commitments | Redemption Frequency | Redemption Notice Period |
| Cash equivalents | \$ 489 | — | N/A | N/A |
| Fixed income fund | 66,669 | — | Daily | Daily |
| <u>Equity securities:</u> | | | | |
| U.S. small/mid cap funds | 26,998 | — | Daily | Daily |
| U.S. large cap funds | 53,985 | — | Daily | Daily |
| International funds | 17,893 | — | Daily | Daily |
| Total equity funds | 98,876 | — | | |
| Real estate funds | 7,614 | — | Daily | Daily |
| Total | \$ 173,648 | — | | |
| Net Asset Value as of December 31, 2016 | | | | |
| (dollars in thousands) | Fair Value | Unfunded Commitments | Redemption Frequency | Redemption Notice Period |
| Cash equivalents | \$ 500 | — | N/A | N/A |
| Fixed income fund | 57,674 | — | Daily | Daily |
| <u>Equity securities:</u> | | | | |
| U.S. small/mid cap funds | 24,312 | — | Daily | Daily |
| U.S. large cap funds | 46,175 | — | Daily | Daily |
| International funds | 14,869 | — | Daily | Daily |
| Total equity funds | 85,356 | — | | |
| Real estate funds | 7,342 | — | Daily | Daily |
| Total | \$ 150,872 | — | | |

The collective trust funds may be invested or redeemed daily, and generally do not have any significant restrictions to redeem the investments.

As previously discussed in Note 1, the accounting guidance for fair value measurements establishes a framework for measuring fair value and requires fair value measurements to be classified and disclosed in one of three levels. As required by the accounting guidance, assets and liabilities are classified in their entirety based on the lowest level of input that is significant to the fair value measurement. All equity investments in the post-retirement medical plan are Level 1 investments in mutual funds. The fixed income category includes corporate bonds and notes. The majority of fixed income investments range in maturities from less than one to twenty years. The fair values of these investments are based on quoted market prices in active markets.

AMERICAN STATES WATER COMPANY AND SUBSIDIARIES
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

The following tables set forth by level, within the fair value hierarchy, the post-retirement plan's investment assets measured at fair value as of December 31, 2017 and 2016:

| (dollars in thousands) | Fair Value as of December 31, 2017 | | | |

| Fair Value of Post-Retirement Plan Assets: | | | | |
| Cash equivalents | \$ 360 | — | — | \$ 360 |
| Fixed income | 4,072 | — | — | 4,072 |
| U.S. equity securities (large cap stocks) | 6,106 | — | — | 6,106 |
| Total investments measured at fair value | <u>\$ 10,538</u> | <u>—</u> | <u>—</u> | <u>\$ 10,538</u> |

Plan Contributions:

During 2017, Registrant contributed \$6.5 million to its pension plan and did not make a contribution to the post-retirement medical plan. Registrant currently expects to contribute approximately \$6.1 million to its pension plan in 2018. Registrant's policy is to fund the plans annually at a level which is deductible for income tax purposes and is consistent with amounts recovered in customer rates.

Benefit Payments:

Estimated future benefit payments at December 31, 2017 for the next five years and thereafter are as follows (in thousands):

| | Pension Benefits | Post-Retirement Medical Benefits |
|------------|------------------|-------------------------------------|
| 2018 | \$ 6,737 | \$ 554 |
| 2019 | 7,281 | 574 |
| 2020 | 7,900 | 632 |
| 2021 | 8,516 | 720 |
| 2022 | 9,196 | 749 |
| Thereafter | 54,429 | 3,365 |
| Total | <u>\$ 94,059</u> | <u>\$ 6,594</u> |

Assumptions:

Certain actuarial assumptions, such as the discount rate, long-term rate of return on plan assets, mortality, and the healthcare cost trend rate have a significant effect on the amounts reported for net periodic benefit cost as well as the related benefit obligation amounts. During 2015, Registrant updated other key assumptions used for the valuation of the pension, post-retirement medical and supplemental executive retirement plans. These updates included: (i) updates in demographic assumptions, such as retirement and termination rates, to reflect recent changes in participant behavior, and (ii) salary increases based on Registrant's recent and future expected experience.

Discount Rate — The assumed discount rate for pension and post-retirement medical plans reflects the market rates for high-quality corporate bonds currently available. Registrant's discount rates were determined by considering the average of pension yield curves constructed of a large population of high quality corporate bonds. The resulting discount rate reflects the matching of plan liability cash flows to the yield curves.

AMERICAN STATES WATER COMPANY AND SUBSIDIARIES Page 360 of 2101
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

Expected Long-Term Rate of Return on Assets — The long-term rate of return on plan assets represents an estimate of long-term returns on an investment portfolio consisting of a mixture of equities, fixed income and other investments. To develop the expected long-term rate of return on assets assumption for the pension plan, Registrant considered the historical returns and the future expectations for returns for each asset class, as well as the target asset allocation of the pension portfolio. Registrant's policy is to fund the medical benefit trusts based on actuarially determined amounts as allowed in rates approved by the CPUC. Registrant has invested the funds in the post-retirement trusts that will achieve a desired return and minimize amounts necessary to recover through rates. The mix is expected to provide for a return on assets similar to the Pension Plan and to achieve Registrant's targeted allocation. This resulted in the selection in 2017 of the 6.0% long-term rate of return on assets assumption for the union plan and 4.2% (net of income taxes) for the non-union plan portion of the post-retirement plan.

Mortality — Mortality assumptions are a critical component of benefit obligation amounts and a key factor in determining the expected length of time for annuity payments. In 2014, the Society of Actuaries ("SOA") released new mortality tables for pension plans. Beginning with 2014, the benefit obligation amounts assumed a longer life expectancy of participants as a result of the actuarial update to mortality tables. In 2016, the SOA published updated mortality tables reflecting three additional years of data and refined certain parameters used in developing the 2014 tables. Accordingly, the benefit obligation amounts as of December 31, 2017 and 2016 have incorporated the latest updates to the mortality tables.

Healthcare Cost Trend Rate — The assumed health care cost trend rate for 2018 starts at 6.2% grading down to 4.5% in 2038 for those under age 65, and at 6.2% grading down to 4.4% in 2038 for those 65 and over. Assumed health care cost trend rates have a significant effect on the amounts reported for the health care plans. A one-percentage-point change in assumed health care cost trend rates would have the following effects on the post-retirement medical plan:

| <u>(dollars in thousands)</u> | <u>1-Percentage-Point Increase</u> | <u>1-Percentage-Point Decrease</u> |
|---|--|--|
| Effect on total of service and interest cost components | \$ 45 | \$ (39) |
| Effect on post-retirement benefit obligation | \$ 894 | \$ (769) |

Supplemental Executive Retirement Plan:

Registrant has a supplemental executive retirement plan ("SERP") that provides additional retirement benefits to certain key employees and officers of Registrant by making up benefits that are limited by Sections 415 and 401(a)(17) of the Internal Revenue Code of 1986, as amended, and certain additional benefits. The Board of Directors approved the establishment of a Rabbi Trust created for the SERP. Assets in a Rabbi Trust can be subject to the claims of creditors; therefore, they are not considered as an asset for purposes of computing the SERP's funded status. As of December 31, 2017, the balance in the Rabbi Trust totaled \$15.2 million and is included in Registrant's other property and investments.

All equity investments in the Rabbi Trust are Level 1 investments in mutual funds. The fixed income category includes corporate bonds and notes. The fair values of these investments are based on quoted market prices in active markets. The following tables set forth by level, within the fair value hierarchy, the Rabbi Trust investment assets measured at fair value as of December 31, 2017 and 2016:

| <u>(dollars in thousands)</u> | <u>Fair Value as of December 31, 2017</u> | | | |

401(k) Investment Incentive Program:

Registrant has a 401(k) Investment Incentive Program under which employees may invest a percentage of their pay, up to a maximum investment prescribed by law, in an investment program managed by an outside investment manager. Registrant's cash contributions to the 401(k) are based upon a percentage of individual employee contributions and for the years ended December 31, 2017, 2016 and 2015 were \$2.3 million, \$2.2 million and \$2.1 million, respectively. The Investment Incentive Program also incorporates the defined contribution plan for employees hired on or after January 1, 2011. Contributions to the defined contribution plan for the years ended December 31, 2017, 2016 and 2015 were \$1.1 million, \$951,000 and \$755,000, respectively.

AMERICAN STATES WATER COMPANY AND SUBSIDIARIES
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

Note 12 — Stock-Based Compensation Plans

Summary Description of Stock Incentive Plans

As of December 31, 2017, AWR had five stock incentive plans: the 2000, 2008 and 2016 stock incentive plans for its employees, and the 2003 and 2013 non-employee directors plans for its Board of Directors, each more fully described below.

2000, 2008 and 2016 Employee Plans — AWR adopted these employee plans, following shareholder approval, to provide stock-based incentive awards in the form of stock options, restricted stock units and restricted stock to employees as a means of promoting the success of Registrant by attracting, retaining and more fully aligning the interests of employees with those of customers and shareholders. The 2008 and 2016 employee plans also provide for the grant of performance awards. No additional grants may be made under the 2000 or 2008 employee plans. No restricted stock grants are currently outstanding under either the 2000 or 2008 employee plans and, as of January 28, 2018, no stock options were outstanding under the 2000 plan.

For stock options, Registrant's Compensation Committee of the Board of Directors ("Compensation Committee") determines, among other things, the date of grant, the form, term, option exercise price, vesting and exercise terms of each option. Stock options granted by AWR have been in the form of nonqualified stock options, expire 10 years from the date of grant, vest over a period of 3 years and are subject to earlier termination as provided in the form of option agreements approved by the Compensation Committee. The option price per share is determined by the Compensation Committee at the time of grant but may not be less than the fair market value of AWR's Common Shares on the date of grant.

For restricted stock unit awards, the Compensation Committee determines the specific terms, conditions and provisions relating to each restricted stock unit. Each employee who has been granted a time-vested restricted stock unit is entitled to dividend equivalent rights in the form of additional restricted stock units until vesting of the time-vested restricted stock units. In general, time-vested restricted stock units vest over a period of 3 years. Restricted stock units may also vest upon retirement if the grantee is at least 55 and the sum of the grantee's age and years of service are equal to or greater than 75, or upon death or total disability. In addition, restricted stock units may vest following a change in control if the Company terminates the grantee other than for cause or the employee terminates employment for good reason. Each restricted stock unit is non-voting and entitles the holder of the restricted stock unit to receive one Common Share.

The Compensation Committee also has the authority to determine the number, amount or value of performance awards, the duration of the performance period or performance periods applicable to the award and the performance criteria applicable to each performance award for each performance period. Each outstanding performance award granted by the Compensation Committee has been in the form of restricted stock units that generally vest over a period of three years as provided in the performance award agreement. The amount of the performance award paid to an employee depends upon satisfaction of performance criteria following the end of a three-year performance period. Performance awards may also vest and be payable upon retirement if the grantee is at least 55 and the sum of the grantee's age and years of service are equal to or greater than 75, or upon death or total disability, with adjustments which take into account the shortened performance period for death and disability. In addition, performance awards may vest following a change in control if the Company terminates the grantee other than for cause or the employee terminates employment for good reason, subject to adjustments which take into account the shortened performance period.

2003 and 2013 Directors Plans — The Board of Directors and shareholders of AWR have approved the 2003 and 2013 directors plans in order to provide the non-employee directors with supplemental stock-based compensation to encourage them to increase their stock ownership in AWR. No more grants may be made under the 2003 directors plan.

Non-employee directors are entitled to receive restricted stock units in an amount determined by the board of directors. This amount may not exceed two times the annual retainer paid to directors. Effective for grants of restricted stock units to non-employee directors after 2012, such units are convertible to AWR's Common Shares ninety days after the grant date.

All non-employee directors of AWR who were directors of AWR at the 2003 annual meeting have also received restricted stock units, which will be distributed upon termination of the director's service as a director.

All stock options, restricted stock units and performance awards have been granted with dividend equivalent rights payable in the form of additional restricted stock units.

AMERICAN STATES WATER COMPANY AND SUBSIDIARIES
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

Recognition of Compensation Expense

Registrant recognizes compensation expense related to the fair value of stock-based compensation awards. Share-based compensation cost is measured at the grant date, based on the calculated fair value of the award, and is recognized as an expense over the employee's requisite service period (generally the vesting period of the equity grant). Immediate vesting occurs if the employee is at least 55 years old and the sum of the employee's age and years of employment is equal to or greater than 75. Registrant assumes that pre-vesting forfeitures will be minimal, and recognizes pre-vesting forfeitures as they occur, which results in a reduction in compensation expense.

The following table presents share-based compensation expenses for the years ended December 31, 2017, 2016 and 2015. These expenses resulting from restricted stock units, including performance awards, are included in administrative and general expenses in AWR's and GSWC's statements of income:

| (in thousands) | AWR | | | GSWC | | |
|--|-------------------------------------|----------|----------|-------------------------------------|----------|----------|
| | For The Years Ended December 31, | | | For The Years Ended December 31, | | |
| | 2017 | 2016 | 2015 | 2017 | 2016 | 2015 |
| Stock-based compensation related to: | | | | | | |
| Restricted stock units | \$ 2,885 | \$ 2,538 | \$ 2,754 | \$ 2,420 | \$ 2,118 | \$ 2,443 |
| Total stock-based compensation expense | \$ 2,885 | \$ 2,538 | \$ 2,754 | \$ 2,420 | \$ 2,118 | \$ 2,443 |

Equity-based compensation cost, capitalized as part of GSWC's utility plant for the years ended December 31, 2017, 2016 and 2015 was \$195,000, \$155,000 and \$369,000, respectively, for both AWR and GSWC. For the years ended December 31, 2017, 2016 and 2015, AWR realized approximately \$1.0 million, \$581,000 and \$877,000, respectively, of tax benefits from stock-based awards. For the years ended December 31, 2017, 2016 and 2015, GSWC realized approximately \$1.0 million, \$501,000 and \$872,000, respectively, of tax benefits from stock-based awards.

Registrant amortizes stock-based compensation over the requisite (vesting) period for the entire award. Options issued pursuant to the 2008 employee plan vest and are exercisable in installments of 33% the first two years and 34% in the third year, starting one year from the date of the grant and expire 10 years from the date of the grant. No stock options have been granted under the 2016 employee plan. Time-vesting restricted stock units vest and become nonforfeitable in installments of 33% the first two years and 34% in the third year, starting one year from the date of the grant. Outstanding performance awards vest and become nonforfeitable in installments of 33% the first two years and 34% in the third year and are distributed at the end of the performance period if the performance criteria set forth in the award agreement are satisfied.

Stock Options — There were no stock options granted during the years 2017, 2016 or 2015. A summary of stock option activity as of December 31, 2017 and changes during the year ended December 31, 2017, are presented below:

| | Number of Options | Weighted Average Exercise Price | Weighted Average Remaining Contractual Term | Aggregate Intrinsic Value |
|--|----------------------|---------------------------------------|---|------------------------------|
| Options outstanding at January 1, 2017 | 136,560 | \$ 17.27 | | |
| Exercised | (52,936) | 17.18 | | |
| Forfeited or expired | (14,422) | 19.50 | | |
| Options outstanding at December 31, 2017 | 69,202 | \$ 16.87 | 1.35 | \$ 1,167,405 |
| Options exercisable at December 31, 2017 | 69,202 | \$ 16.87 | 1.35 | \$ 1,167,405 |

The aggregate intrinsic value in the table above represents the total pretax intrinsic value (i.e., the difference between the closing price of AWR's Common Shares on the last trading day of the 2017 calendar year and the exercise price, times the number of shares) that would have been received by the option holders had all option holders exercised their option on December 31, 2017. This amount changes if the fair market value of the Common Shares changes. The total intrinsic value of options exercised during the years ended December 31, 2017, 2016 and 2015 was approximately \$1,718,000, \$308,000 and \$1,457,000, respectively.

During the years ended December 31, 2017, 2016 and 2015, Registrant received approximately \$909,000, \$235,000 and \$1,198,000, respectively, in cash proceeds from the exercise of its stock options.

AMERICAN STATES WATER COMPANY AND SUBSIDIARIES
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

Restricted Stock Units (Time-Vested) — A restricted stock unit (“RSU”) represents the right to receive a share of AWR’s Common Shares and are valued based on the fair market value of AWR’s Common Shares on the date of grant. The fair value of RSUs were determined based on the closing trading price of Common Shares on the grant date. A summary of the status of Registrant’s outstanding RSUs, excluding performance awards, to employees and directors as of December 31, 2017, and changes during the year ended December 31, 2017, is presented below:

| | Number of Restricted Share Units | Weighted Average Grant-Date Value |
|---|---|--|
| Restricted share units at January 1, 2017 | 107,729 | \$ 30.83 |
| Granted | 41,755 | 44.46 |
| Vested | (40,695) | 39.32 |
| Forfeited | (1,502) | 42.32 |
| Restricted share units at December 31, 2017 | <u>107,287</u> | <u>\$ 32.75</u> |

As of December 31, 2017, there was approximately \$824,000 of total unrecognized compensation cost related to time-vested restricted stock units granted under AWR’s employee and director’s stock plans. That cost is expected to be recognized over a weighted average period of 1.36 years.

Restricted Stock Units (Performance Awards) – During the years ended December 31, 2017, 2016 and 2015, the Compensation Committee granted performance awards in the form of restricted stock units to officers of the Registrant. A performance award represents the right to receive a share of AWR’s Common Shares if specified performance goals are met over the performance period specified in the grant (generally three years). Each grantee of any outstanding performance award may earn between 0% and 200% of the target amount depending on Registrant’s performance against performance goals, which are determined by the Compensation Committee on the date of grant. As determined by the Compensation Committee, the performance awards granted during the years ended December 31, 2017, 2016 and 2015 included various performance-based conditions and one market-based condition related to total shareholder return (“TSR”) that will be earned based on Registrant’s TSR compared to the TSR for a specific peer group of investor-owned water companies.

A summary of the status of Registrant’s outstanding performance awards to officers as of December 31, 2017, and changes during the year ended December 31, 2017, is presented below:

| | Number of Performance awards | Weighted Average Grant-Date Value |
|---|---|--|
| Performance awards at January 1, 2017 | 102,203 | \$ 35.25 |
| Granted | 31,558 | 44.10 |
| Performance criteria adjustment | 9,332 | 43.40 |
| Vested | (45,214) | 29.60 |
| Performance awards at December 31, 2017 | <u>97,879</u> | <u>\$ 41.49</u> |

A portion of the fair value of performance awards was estimated at the grant date based on the probability of satisfying the market-based condition using a Monte-Carlo simulation model, which assesses the probabilities of various outcomes of the market condition. The portion of the fair value of the performance awards associated with performance-based conditions was based on the fair market value of AWR’s Common Shares at the grant date. The fair value of each outstanding performance award grant is amortized into compensation expense in installments of 33% the first two years and 34% in the third year of their respective vesting periods, which is generally over 3 years unless earlier vested pursuant to the terms of the agreement. The accrual of compensation costs is based on the estimate of the final expected value of the award and is adjusted as required for the portion based on the performance-based condition. Unlike the awards with performance-based conditions, for the portion based on the market-based condition, compensation cost is recognized, and not reversed, even if the market condition is not achieved, as required by the accounting guidance for share-based awards. As of December 31, 2017, \$1,059,000 of unrecognized compensation costs related to performance awards is expected to be recognized over a weighted average period of 1.58 years.

AMERICAN STATES WATER COMPANY AND SUBSIDIARIES
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

Note 13 - Commitments**GSWC's Water Supply:**

GSWC obtains its water supply from its operating wells and purchases from others, principally member agencies of the Metropolitan Water District of Southern California ("MWD"). MWD is a public agency and quasi-municipal corporation created in 1928 by a vote of the electorates of several Southern California cities. MWD's primary purpose was and is to provide a supplemental supply of water for domestic and municipal uses and purposes at wholesale rates to its member public agencies. GSWC has connections to MWD's water distribution facilities and those of other member water agencies. MWD's principal sources of water are the State Water Project and the Colorado River.

GSWC has contracts to purchase water or water rights for an aggregate amount of \$4.8 million as of December 31, 2017. Included in the \$4.8 million is a commitment of \$2.4 million to lease water rights from a third party under an agreement which expires in 2028. The remaining \$2.4 million are commitments for purchased water with other third parties which expire through 2038.

GSWC's estimated future minimum payments under these purchased water supply commitments at December 31, 2017 are as follows (in thousands):

| | | |
|------------|----|--------------|
| 2018 | \$ | 400 |
| 2019 | | 400 |
| 2020 | | 401 |
| 2021 | | 400 |
| 2022 | | 401 |
| Thereafter | | 2,792 |
| Total | \$ | <u>4,794</u> |

Bear Valley Electric Service:

Generally, BVES purchases power at a fixed cost, under long-term purchased power contracts, depending on the amount of power and the period during which the power is purchased under such contracts. BVES began taking power pursuant to purchased power contracts approved by the CPUC effective January 1, 2015 at a fixed cost over three and five year terms depending on the amount of power and period during which the power is purchased under the contracts. The three-year contract expired in 2017. As of December 31, 2017, GSWC's commitment under BVES's remaining contract totaled approximately \$9.6 million.

Operating Leases:

Registrant leases equipment and facilities primarily for its Regional and District offices and ASUS operations under non-cancelable operating leases with varying terms, provisions and expiration dates. Rent expense for leases that contain scheduled rent increases are recorded on a straight-line basis. During 2017, 2016 and 2015, Registrant's consolidated rent expense was approximately \$2,448,000, \$2,298,000 and \$2,740,000, respectively. Registrant's future minimum payments under long-term non-cancelable operating leases at December 31, 2017 are as follows (in thousands):

| | | |
|------------|----|--------------|
| 2018 | \$ | 2,250 |
| 2019 | | 1,934 |
| 2020 | | 1,717 |
| 2021 | | 819 |
| 2022 | | 892 |
| Thereafter | | 339 |
| Total | \$ | <u>7,951</u> |

There is no material difference between the consolidated operations of AWR and the operations of GSWC in regard to the future minimum payments under long-term non-cancelable operating leases.

AMERICAN STATES WATER COMPANY AND SUBSIDIARIES Page 367 of 2101
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

Note 14 - Contingencies and Gain on Sale of Assets

Condemnation of Properties:

The laws of the State of California provide for the acquisition of public utility property by governmental agencies through their power of eminent domain, also known as condemnation, where doing so is necessary and in the public interest. In addition, these laws provide that the owner of utility property (i) may contest whether the condemnation is necessary and in the public interest, and (ii) is entitled to receive the fair market value of its property if the property is ultimately taken.

Claremont System:

In December 2014, the City of Claremont, California (“Claremont”) filed an eminent-domain action against GSWC to condemn GSWC's Claremont water system. In December 2016, the County of Los Angeles Superior Court (the “Court”) issued a decision rejecting Claremont’s attempt to take over GSWC’s Claremont water system. In February 2017, the Court further ordered that GSWC is entitled to recover \$7.6 million (“Judgment Amount”) of its litigation expenses and related defense costs from Claremont. During the first quarter of 2017, Claremont appealed both decisions.

In October 2017, GSWC and Claremont entered into a settlement agreement whereby Claremont agreed to drop its appeals and in December 2017 paid \$2.0 million to GSWC as partial satisfaction of the Judgment Amount, plus interest accrued through the end of 2017. GSWC recorded the \$2.0 million as a reduction to legal fees of \$1.8 million and an increase in interest income of \$200,000 in the fourth quarter of 2017. Furthermore, quarterly interest-only payments calculated on the unpaid Judgment Amount of \$5.9 million are to be made by Claremont to GSWC over the next twelve years. If Claremont (i) makes all of the quarterly payments as required, and (ii) does not take formal action to condemn GSWC's Claremont water system before December 31, 2029, then on January 1, 2030, the unpaid Judgment Amount will be deemed satisfied by Claremont without further payment required to be made to GSWC. However, if Claremont were to take formal action within the next 12 years or miss any of the required payments specified in the settlement agreement, the unpaid Judgment Amount and any unpaid accrued interest would immediately become due and payable. GSWC is unable to predict the actions that Claremont will take over the next 12 years and, as a result, will record the quarterly payments only to the extent that they are collected from Claremont over this period. GSWC serves approximately 11,000 customers in Claremont.

Ojai Water System and Gain on Sale of Assets:

On April 12, 2017, the Board of Directors of Casitas Municipal Water District (“Casitas”) approved a settlement agreement with GSWC, and a group of citizens referred to as Ojai Friends of Locally Owned Water (“Ojai FLOW”), to resolve the eminent domain action and other litigation brought by Casitas and Ojai FLOW against GSWC. In accordance with the terms of the settlement agreement, on June 8, 2017 Casitas acquired the operating assets of GSWC’s 2,900-connection Ojai water system by eminent domain for \$34.3 million in cash, including payments for customer receivables and regulatory assets, and Casitas and Ojai FLOW dismissed all claims against GSWC. As a result of this transaction, GSWC recorded a pretax gain of \$8.3 million on the sale of the Ojai water system during the second quarter of 2017. The proceeds received from this transaction were used to repay a portion of GSWC’s short-term borrowings. On June 8, 2017, the closing date of the transaction, the assets and liabilities related to the Ojai water system acquired and assumed by Casitas were as follows:

Assets and Liabilities Sold:

| (dollars in thousands) | <u>As of June 8, 2017</u> |
|--|---------------------------|
| Net utility plant, including construction work in progress | \$ 22,256 |
| Accounts receivable | 721 |
| Regulatory assets | 3,944 |
| Assets sold | <u>\$ 26,921</u> |
| Advances for construction | \$ (366) |
| Contributions in aid of construction — net | <u>(532)</u> |
| Liabilities directly associated with assets sold | <u>\$ (898)</u> |

AMERICAN STATES WATER COMPANY AND SUBSIDIARIES Page 368 of 2101
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

Environmental Clean-Up and Remediation:

GSWC has been involved in environmental remediation and cleanup at a plant site (“Chadron Plant”) that contained an underground storage tank which was used to store gasoline for its vehicles. This tank was removed from the ground in July 1990 along with the dispenser and ancillary piping. Since then, GSWC has been involved in various remediation activities at this site. Analysis indicates that offsite monitoring wells may also be necessary to document effectiveness of remediation.

As of December 31, 2017, the total spent to clean-up and remediate the Chadron Plant was approximately \$5.3 million, of which \$1.5 million has been paid by the State of California Underground Storage Tank Fund. Amounts paid by GSWC have been included in rate base and approved by the CPUC for recovery. As of December 31, 2017, GSWC has a regulatory asset and an accrued liability for the estimated remaining cost of \$1.3 million to complete the cleanup at the site. The estimate includes costs for two years of continued activities of groundwater cleanup and monitoring, future soil treatment and site-closure-related activities. The ultimate cost may vary as there are many unknowns in remediation of underground gasoline spills and this is an estimate based on currently available information. Management also believes it is probable that the estimated additional costs will be approved in rate base by the CPUC.

Other Litigation:

Registrant is also subject to other ordinary routine litigation incidental to its business, some of which may include claims for compensatory and punitive damages. Management believes that rate recovery, proper insurance coverage and reserves are in place to insure against, among other things, property, general liability, employment, and workers’ compensation claims incurred in the ordinary course of business. Insurance coverage may not cover certain claims involving punitive damages. However, Registrant does not believe the outcome from any pending suits or administrative proceedings will have a material effect on Registrant's consolidated results of operations, financial position or cash flows.

AMERICAN STATES WATER COMPANY AND SUBSIDIARIES
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

Note 15 - Business Segments

AWR has 3 reportable segments, water, electric and contracted services, whereas GSWC has 2 segments, water and electric. AWR has no material assets other than its investments in its subsidiaries on a stand-alone basis.

All activities of GSWC are geographically located within California. Activities of ASUS and the Military Utility Privatization Subsidiaries are conducted in California, Florida, Georgia, Maryland, New Mexico, North Carolina, South Carolina, Texas and Virginia. In September 2017, ASUS was awarded a new 50-year contract by the U.S. government for water and wastewater operations at Fort Riley located in Kansas. ASUS expects to assume operations at Fort Riley following the completion of a six-to-twelve-month transition period currently underway. Each of the Military Utility Privatization Subsidiaries is regulated, if applicable, by the state in which the subsidiary primarily conducts water and/or wastewater operations. Fees charged for operations and maintenance and renewal and replacement services are based upon the terms of the contracts with the U.S. government which have been filed, as appropriate, with the commissions in the states in which ASUS's subsidiaries are incorporated.

The tables below set forth information relating to GSWC's operating segments, ASUS and the Military Utility Privatization Subsidiaries and other matters. Total assets by segment are not presented below, as certain of Registrant's assets are not tracked by segment. The utility plant balances are net of respective accumulated provisions for depreciation. Capital additions reflect capital expenditures paid in cash and exclude U.S. government-funded and third-party prime funded capital expenditures for ASUS and property installed by developers and conveyed to GSWC.

| (dollars in thousands) | As Of And For The Year Ended December 31, 2017 | | | | |

| Net income | 8,984 | 13,670 | 17,883 | 6,432 | 46,969 |

* The sum of the quarterly 2017 basic earnings per share amounts do not agree to the yearly total due to rounding.

- (1) The second quarter of 2017 includes (i) an \$8.3 million pretax gain related to the sale of GSWC's Ojai water system, and (ii) retroactive operating revenues at ASUS totaling \$1.0 million related to periods prior to 2017 as a result of the U.S. government's approval of ASUS's economic price adjustment for one of its utility privatization contracts.
- (2) The fourth quarter of 2017 includes the remeasurement of deferred taxes as a result of the Tax Cuts and Jobs Act. In addition, a \$1.8 million reduction to GSWC's operating expenses was recorded representing cash received for reimbursement of legal and other defense costs incurred related to condemnation matters.
- (3) The fourth quarter of 2016 includes (i) a \$5.2 million retroactive downward adjustment to GSWC's water gross margin related to the first nine months of 2016 as a result of the CPUC's delayed decision issued in GSWC's water general rate case in December 2016, which was retroactive to January 1, 2016, and (ii) retroactive operating revenues at ASUS totaling \$1.7 million related to the period ended September 30, 2016 as a result of the U.S. government's concurrence with ASUS's price redetermination for one of its utility privatization contracts.

Item 9. Changes in and Disagreements with Accountants on Accounting and Financial Disclosure

None.

Item 9A. Controls and Procedures**(a) Conclusion Regarding the Effectiveness of Disclosure Controls and Procedures**

Under the supervision and with the participation of our management, including our principal executive officer and principal financial officer, we conducted an evaluation of our disclosure controls and procedures, as such term is defined under Rule 13a-15(e) or 15d-15(e) promulgated under the Securities Exchange Act of 1934, as amended (the “Exchange Act”). Based on this evaluation, our principal executive officer and our principal financial officer concluded that the disclosure controls and procedures of AWR and GSWC were effective as of the end of the period covered by this annual report.

(b) Management’s Report on Internal Control over Financial Reporting

Our management is responsible for establishing and maintaining adequate internal control over financial reporting, as such term is defined in Exchange Act Rule 13a-15(f). Under the supervision and with the participation of our management, including our principal executive officer and principal financial officer, we conducted an evaluation of the effectiveness of our internal control over financial reporting based on the framework in *Internal Control - Integrated Framework* (2013) issued by the Committee of Sponsoring Organizations of the Treadway Commission. Based on our evaluation under the framework in *Internal Control - Integrated Framework*, our management concluded that the internal control over financial reporting of AWR and GSWC was effective as of December 31, 2017.

(c) Attestation Report of the Independent Registered Public Accounting Firm

The effectiveness of our internal control over financial reporting of AWR as of December 31, 2017 has been audited by PricewaterhouseCoopers LLP, an independent registered public accounting firm, as stated in their report which is included herein.

(d) Changes in Internal Control over Financial Reporting

There have been no changes in our internal control over financial reporting (as such term is defined in Rules 13a-15(f) or 15d(f) under the Exchange Act) of AWR and GSWC that occurred during the fourth quarter of 2017 that have materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.

Item 9B. Other Information

None.

PART III**Item 10. Directors, Executive Officers and Corporate Governance**

Information responsive to Part III, Item 10 is included in the Proxy Statement, to be filed by AWR with the SEC pursuant to Regulation 14A, under the captions therein entitled: (i) “Proposal 1: Election of Directors”; (ii) “Executive Officers”; (iii) “Governance of the Company”; (iv) “Stock Ownership”; (v) “Nominating and Governance Committee”; (vi) “Audit and Finance Committee;” and (vii) “Obtaining Additional Information From Us” and is incorporated herein by reference pursuant to General Instruction G(3).

Item 11. Executive Compensation

Information responsive to Part III, Item 11 is included in the Proxy Statement, to be filed by AWR with the SEC pursuant to Regulation 14A, under the captions therein entitled: (i) “Proposal 1: Election of Directors”; (ii) “Executive Officers;” and (iii) “Compensation Committee” and is incorporated herein by reference pursuant to General Instruction G(3).

Item 12. Security Ownership of Certain Beneficial Owners and Management and Related Stockholder Matters

Information responsive to Part III, Item 12 is included in the Proxy Statement, to be filed by AWR with the SEC pursuant to Regulation 14A, under the caption entitled “Stock Ownership” and is incorporated herein by reference pursuant to General Instruction G(3).

Securities Authorized for Issuance under Equity Compensation Plans

AWR has made stock awards to its executive officers and managers under the 2000, 2008 and 2016 employee plans. It has also made stock awards to its non-employee directors under the 2003 and 2013 director plans. Information regarding the securities which have been issued and which are available for issuance under these plans is set forth in the table below as of December 31, 2017. This table does not include any AWR Common Shares that may be issued under our 401(k) plan.

| Plan Category | Number of securities to be issued upon exercise of outstanding options, warrants and rights⁽¹⁾ | Weighted-average exercise price of outstanding options, warrants and rights⁽²⁾ | Number of securities remaining available for future issuance under equity compensation plans (excluding securities reflected in the first column)⁽³⁾ |
|--|--|--|--|
| Equity compensation plans approved by shareholders | 299,090 | \$16.87 | 2,050,692 |
| Equity compensation plans not approved by shareholders | — | — | — |
| Total | 299,090 | \$16.87 | 2,050,692 |

(1) Amount shown in this column consists of 69,202 options outstanding under the 2000 employee plan and the 2008 employee plan, 24,718 time-vested restricted stock units outstanding under the 2008 employee plan (including dividend equivalents thereon with respect to declared dividends), and 26,139 time-vested restricted stock units outstanding under the 2016 employee plan (including dividend equivalents thereon with respect to declared dividends), 53,622 performance awards at the maximum level (including dividend equivalents thereon with respect to declared dividends) outstanding under the 2008 employee plan and 68,980 performance awards at the maximum level (including dividend equivalents thereon with respect to declared dividends) outstanding under the 2016 employee plan, and 56,430 restricted stock units (including dividend equivalents thereon with respect to declared dividends) outstanding under the 2003 directors plan.

(2) Amount shown in this column is for options granted only.

(3) Amount shown in this column consists of 195,916 shares available under the 2003 directors plan, 135,035 shares available under the 2013 directors plan, 453,991 shares available under the 2008 employee plan, and 1,265,750 shares available under the 2016 employee plan. The only shares that may be issued under the 2003 directors plan are pursuant to dividend equivalent rights on dividends not yet declared with respect to restricted stock units granted under the 2003 directors plan. The only shares that maybe issued under the 2008 employee plan are pursuant to dividend equivalent rights on dividends not yet declared with respect to restricted stock units and performance awards granted under the 2008 employee plan. No additional stock awards may be granted under the 2000 employee plan, the 2003 directors plan or the 2008 employee plan.

Item 13. Certain Relationships and Related Transactions, and Director Independence

Information responsive to Part III, Item 13 is included in the Proxy Statement, to be filed by AWR with the SEC pursuant to Regulation 14A, under the caption therein entitled “Governance of the Company” and is incorporated herein by reference pursuant to General Instruction G(3).

Item 14. Principal Accounting Fees and Services

Information responsive to Part III, Item 14 is included in the Proxy Statement, to be filed by AWR with the SEC pursuant to Regulation 14A, under the caption therein entitled “Proposal 4: Ratification of Auditors” and is incorporated herein by reference pursuant to General Instruction G(3).

PART IV**Item 15. Exhibits, Financial Statement Schedules****(a) The following documents are filed as a part of this Annual Report on Form 10-K:**

1. Reference is made to the Financial Statements incorporated herein by reference to Part II, Item 8 hereof.
2. Schedule I — Condensed Financial Information of AWR Parent. Schedules II, III, IV, and V are omitted as they are not applicable.
3. Reference is made to Item 15(b) of this Annual Report on Form 10-K.

(b) Exhibits:

- 3.1 By-Laws of American States Water Company incorporated by reference to Exhibit 3.1 of Registrant's Form 10-Q, filed August 6, 2012 (File No. 1-14431)
- 3.2 By-laws of Golden State Water Company incorporated by reference to Exhibit 3.2 of Registrant's Form 8-K filed May 13, 2011 (File No. 1-14431)

AMERICAN STATES WATER COMPANY
NOTES TO CONDENSED FINANCIAL INFORMATION OF PARENT

Note 1 — Basis of Presentation

The accompanying condensed financial statements of AWR (parent) should be read in conjunction with the consolidated financial statements and notes thereto of American States Water Company and subsidiaries ("Registrant") included in Part II, Item 8 of this Form 10-K. AWR's (parent) significant accounting policies are consistent with those of Registrant and its wholly owned subsidiaries, Golden State Water Company ("GSWC") and American States Utility Services, Inc. ("ASUS"), except that all subsidiaries are accounted for as equity method investments.

Related-Party Transactions:

As further discussed in *Note 2 — Notes Payable to Banks*, AWR (parent) has access to a \$150.0 million syndicated credit facility. AWR (parent) borrows under this facility and provides funds to its subsidiaries, in support of their operations. Any amounts owed to AWR (parent) for borrowings under this facility are reflected as inter-company receivables on the condensed balance sheets. The interest rate charged to the subsidiaries is sufficient to cover AWR (parent)'s interest cost under the credit facility.

In October 2015, AWR issued interest bearing promissory notes (the "Notes") to GSWC and ASUS for \$40 million and \$10 million, respectively, which expire on May 23, 2018. Under the terms of the Notes, AWR may borrow from GSWC and ASUS amounts up to \$40 million and \$10 million, respectively, for working capital purposes. AWR agrees to pay any unpaid principal amounts outstanding under these notes, plus accrued interest. As of December 31, 2017 and 2016, there were no amounts outstanding under these notes.

AWR (parent) guarantees performance of ASUS's military privatization contracts and agrees to provide necessary resources, including financing, which are necessary to assure the complete and satisfactory performance of such contracts.

Note 2 — Note Payable to Banks

AWR (parent) has access to a \$150.0 million syndicated credit facility, which expires in May 2018. Management intends to renew the credit facility prior to its expiration. The aggregate effective amount that may be outstanding under letters of credit is \$25.0 million. AWR has obtained letters of credit, primarily for GSWC, in the aggregate amount of \$6.3 million, with fees of 0.65% including: (i) a \$5.4 million letter of credit related to American Recovery and Reinvestment Act funds received by GSWC for reimbursement of capital costs related to the installation of meters in GSWC's Arden-Cordova water system, (ii) letters of credit in an aggregate amount of \$340,000 as security for GSWC's business automobile insurance policy, (iii) a letter of credit in an amount of \$585,000 as security for the purchase of power, and (iv) a \$15,000 irrevocable letter of credit pursuant to a franchise agreement with the City of Rancho Cordova. Letters of credit outstanding reduce the amount that may be borrowed under the revolving credit facility. AWR was not required to maintain any compensating balances.

Loans can be obtained under this credit facility at the option of AWR and bear interest at rates based on credit ratings and Euro rate margins. In May 2017, Standard and Poor's Global Ratings ("S&P") reaffirmed an A+ credit rating with a stable outlook on both AWR and GSWC. S&P's debt ratings range from AAA (highest possible) to D (obligation is in default). In December 2017, Moody's Investors Service ("Moody's") affirmed its A2 rating with a revised rating outlook from stable to positive for GSWC.

At December 31, 2017, there was \$59.0 million outstanding under this facility. At times, AWR (parent) borrows under this facility and provides loans to its subsidiaries in support of its operations, under terms that are similar to that of the credit facility.

AWR's (parent) short-term borrowing activities (excluding letters of credit) for the years ended December 31, 2017 and 2016 were as follows:

| <u>(in thousands, except percent)</u> | <u>December 31,</u> | |
|---------------------------------------|---------------------|-------------|
| | <u>2017</u> | <u>2016</u> |
| Balance Outstanding at December 31, | \$ 59,000 | \$ 90,000 |
| Interest Rate at December 31, | 2.28% | 1.46% |
| Average Amount Outstanding | \$ 65,242 | \$ 59,261 |
| Weighted Average Annual Interest Rate | 1.69% | 1.20% |
| Maximum Amount Outstanding | \$ 102,500 | \$ 96,000 |

AMERICAN STATES WATER COMPANY
NOTES TO CONDENSED FINANCIAL INFORMATION OF PARENT

All of the letters of credit are issued pursuant to the syndicated revolving credit facility. The syndicated revolving credit facility contains restrictions on prepayments, disposition of property, mergers, liens and negative pledges, indebtedness and guaranty obligations, transactions with affiliates, minimum interest coverage requirements, a maximum debt to capitalization ratio and a minimum debt rating. Pursuant to the credit agreement, AWR must maintain a minimum interest coverage ratio of 3.25 times interest expense, a maximum total funded debt ratio of 0.65 to 1.00 and a minimum debt rating from Moody's or S&P of Baa3 or BBB-, respectively. As of December 31, 2017, AWR was in compliance with these covenants with an interest coverage ratio of 7.54 times interest expense, a debt ratio of 0.42 to 1.00 and a debt rating of A+ by S&P.

Note 3 — Income Taxes

AWR (parent) receives a tax benefit for expenses incurred at the parent-company level. AWR (parent) also recognizes the effect of AWR's consolidated California unitary apportionment, which is beneficial or detrimental depending on a combination of the profitability of AWR's consolidated non-California activities as well as the proportion of its consolidated California sales to total sales.

Note 4 — Dividend from Subsidiaries

Dividends in the amount of \$36.5 million, \$33.8 million and \$62.0 million were paid to AWR (parent) by its wholly owned subsidiaries during the years ended December 31, 2017, 2016 and 2015, respectively.

PART I

The terms “we,” “our,” “us,” “Atmos Energy” and the “Company” refer to Atmos Energy Corporation and its subsidiaries, unless the context suggests otherwise.

ITEM 1. *Business.*

Overview and Strategy

Atmos Energy Corporation, headquartered in Dallas, Texas, and incorporated in Texas and Virginia, is one of the country’s largest natural-gas-only distributors based on number of customers. We deliver safe, clean, reliable, efficient, affordable and abundant natural gas through regulated sales and transportation arrangements to over three million residential, commercial, public authority and industrial customers in eight states located primarily in the South. We also operate one of the largest intrastate pipelines in Texas based on miles of pipe.

Atmos Energy's vision is to be the safest provider of natural gas services. We intend to achieve this vision by:

- operating our business exceptionally well
- investing in our people and infrastructure
- enhancing our culture.

Since 2011, our operating strategy has focused on modernizing our distribution and transmission system to improve safety and reliability. Since that time, our capital expenditures have increased approximately 13% annually. Additionally, during this period, we have added new or modified existing regulatory mechanisms to reduce regulatory lag. Our ability to increase capital spending annually to modernize our system has increased our rate base, which has resulted in rising earnings per share and shareholder value.

Our core values include focusing on our employees and customers while conducting our business with honesty and integrity. We continue to strengthen our culture through ongoing communications with our employees and enhanced employee training.

Operating Segments

As of September 30, 2018, we manage and review our consolidated operations through the following three reportable segments:

- The *distribution segment* is primarily comprised of our regulated natural gas distribution and related sales operations in eight states.
- The *pipeline and storage segment* is comprised primarily of the pipeline and storage operations of our Atmos Pipeline-Texas division and our natural gas transmission operations in Louisiana.
- The *natural gas marketing segment* is comprised of our discontinued natural gas marketing business.

These operating segments are described in greater detail below.

Distribution Segment Overview

Our distribution segment is primarily comprised of our regulated natural gas distribution and related sales operations in eight states. The following table summarizes key information about our six regulated natural gas distribution divisions, presented in order of total rate base.

| Division | Service Areas | Communities Served | Customer Meters |
|---------------------|--|---------------------------|------------------------|
| Mid-Tex | Texas, including the Dallas/Fort Worth Metroplex | 550 | 1,697,171 |
| Kentucky/Mid-States | Kentucky | 230 | 182,510 |
| | Tennessee | | 150,661 |
| | Virginia | | 24,396 |
| Louisiana | Louisiana | 270 | 362,233 |
| West Texas | Amarillo, Lubbock, Midland | 80 | 313,828 |
| Mississippi | Mississippi | 110 | 269,333 |
| Colorado-Kansas | Colorado | 170 | 120,384 |
| | Kansas | | 135,820 |

We operate in our service areas under terms of non-exclusive franchise agreements granted by the various cities and towns that we serve. At September 30, 2018, we held 1,013 franchises having terms generally ranging from five to 35 years. A significant number of our franchises expire each year, which require renewal prior to the end of their terms. Historically, we have successfully renewed these franchises and believe that we will continue to be able to renew our franchises as they expire.

Revenues in this operating segment are established by regulatory authorities in the states in which we operate. These rates are intended to be sufficient to cover the costs of conducting business, including a reasonable return on invested capital. In addition, we transport natural gas for others through our distribution systems.

Rates established by regulatory authorities often include cost adjustment mechanisms for costs that (i) are subject to significant price fluctuations compared to our other costs, (ii) represent a large component of our cost of service and (iii) are generally outside our control.

Purchased gas cost adjustment mechanisms represent a common form of cost adjustment mechanism. Purchased gas cost adjustment mechanisms provide natural gas distribution companies a method of recovering purchased gas costs on an ongoing basis without filing a rate case because they provide a dollar-for-dollar offset to increases or decreases in the cost natural gas. Therefore, although substantially all of our distribution operating revenues fluctuate with the cost of gas that we purchase, distribution Contribution Margin (a Non-GAAP measure defined as operating revenues less purchased gas cost) is generally not affected by fluctuations in the cost of gas.

Additionally, some jurisdictions have performance-based ratemaking adjustments to provide incentives to distribution companies to minimize purchased gas costs through improved storage management and use of financial instruments to lock in gas costs. Under the performance-based ratemaking adjustments, purchased gas costs savings are shared between the utility and its customers.

Our supply of natural gas is provided by a variety of suppliers, including independent producers, marketers and pipeline companies, withdrawals of gas from proprietary and contracted storage assets and peaking and spot purchase agreements, as needed.

Supply arrangements consist of both base load and swing supply (peaking) quantities and are contracted from our suppliers on a firm basis with various terms at market prices. Base load quantities are those that flow at a constant level throughout the month and swing supply quantities provide the flexibility to change daily quantities to match increases or decreases in requirements related to weather conditions.

Except for local production purchases, we select our natural gas suppliers through a competitive bidding process by periodically requesting proposals from suppliers that have demonstrated that they can provide reliable service. We select these suppliers based on their ability to deliver gas supply to our designated firm pipeline receipt points at the lowest reasonable cost. Major suppliers during fiscal 2018 were Castleton Commodities Merchant Trading L.P., CenterPoint Energy Services, Inc., Concord Energy LLC, ConocoPhillips Company, Devon Gas Services, L.P., DTE Energy Trading Inc., Mico Inc., Sequent Energy Management, L.P., Targa Gas Marketing LLC and Tenaska Gas Storage & Marketing Ventures, LLC.

The combination of base load, peaking and spot purchase agreements, coupled with the withdrawal of gas held in storage, allows us the flexibility to adjust to changes in weather, which minimizes our need to enter into long-term firm commitments. We estimate our peak-day availability of natural gas supply to be approximately 4.4 Bcf. The peak-day demand for our distribution operations in fiscal 2018 was on January 16, 2018, when sales to customers reached approximately 3.8 Bcf.

Currently, our distribution divisions utilize 38 pipeline transportation companies, both interstate and intrastate, to transport our natural gas. The pipeline transportation agreements are firm and many of them have “pipeline no-notice” storage service, which provides for daily balancing between system requirements and nominated flowing supplies. These agreements have been negotiated with the shortest term necessary while still maintaining our right of first refusal. The natural gas supply for our Mid-Tex Division is delivered primarily by our Atmos Pipeline — Texas Division (APT).

To maintain our deliveries to high priority customers, we have the ability, and have exercised our right, to curtail deliveries to certain customers under the terms of interruptible contracts or applicable state regulations or statutes. Our customers’ demand on our system is not necessarily indicative of our ability to meet current or anticipated market demands or immediate delivery requirements because of factors such as the physical limitations of gathering, storage and transmission systems, the duration and severity of cold weather, the availability of gas reserves from our suppliers, the ability to purchase additional supplies on a short-term basis and actions by federal and state regulatory authorities. Curtailment rights provide us the flexibility to meet the human-needs requirements of our customers on a firm basis. Priority allocations imposed by federal and state regulatory agencies, as well as other factors beyond our control, may affect our ability to meet the demands of our customers. We do not anticipate any problems with obtaining additional gas supply as needed for our customers.

Pipeline and Storage Segment Overview

Our pipeline and storage segment consists of the pipeline and storage operations of APT and our natural gas transmission operations in Louisiana. APT is one of the largest intrastate pipeline operations in Texas with a heavy concentration in the established natural gas-producing areas of central, northern and eastern Texas, extending into or near the major producing areas of the Barnett Shale, the Texas Gulf Coast and the Delaware and Val Verde Basins of West Texas. Through its system, APT provides transportation and storage services to our Mid-Tex Division, other third party local distribution companies, industrial and electric generation customers, marketers and producers. As part of its pipeline operations, APT owns and operates five underground storage reservoirs in Texas.

Revenues earned from transportation and storage services for APT are subject to traditional ratemaking governed by the RRC. Rates are updated through periodic filings made under Texas’ Gas Reliability Infrastructure Program (GRIP). GRIP allows us to include in our rate base annually approved capital costs incurred in the prior calendar year provided that we file a complete rate case at least once every five years; the most recent of which was completed in August 2017. APT’s existing regulatory mechanisms allow certain transportation and storage services to be provided under market-based rates.

Our natural gas transmission operations in Louisiana are comprised of a proprietary 21-mile pipeline located in the New Orleans, Louisiana area that is primarily used to aggregate gas supply for our distribution division in Louisiana under a long-term contract and on a more limited basis, to third parties. The demand fee charged to our Louisiana distribution division for these services is subject to regulatory approval by the Louisiana Public Service Commission. We also manage two asset management plans in Louisiana that serve distribution affiliates of the Company, which have been approved by applicable state regulatory commissions. Generally, these asset management plans require us to share with our distribution customers a significant portion of the cost savings earned from these arrangements.

Natural Gas Marketing Segment Overview

Through December 31, 2016, we were engaged in a nonregulated natural gas marketing business, which was conducted by Atmos Energy Marketing (AEM). AEM’s primary business was to aggregate and purchase gas supply, arrange transportation and storage logistics and ultimately deliver gas to customers at competitive prices. Additionally, AEM utilized proprietary and customer-owned transportation and storage assets to provide various services to its customers requested.

As more fully described in Note 15, effective January 1, 2017, we sold all of the equity interests of AEM to CenterPoint Energy Services, Inc. (CES), a subsidiary of CenterPoint Energy Inc. As a result of the sale, Atmos Energy has fully exited the nonregulated natural gas marketing business. Accordingly, these operations have been reported as discontinued operations.

Ratemaking Activity

Overview

The method of determining regulated rates varies among the states in which our regulated businesses operate. The regulatory authorities have the responsibility of ensuring that utilities in their jurisdictions operate in the best interests of customers while providing utility companies the opportunity to earn a reasonable return on their investment. Generally, each regulatory authority reviews rate requests and establishes a rate structure intended to generate revenue sufficient to cover the costs of conducting business, including a reasonable return on invested capital.

Our rate strategy focuses on reducing or eliminating regulatory lag, obtaining adequate returns and providing stable, predictable margins, which benefit both our customers and the Company. As a result of our ratemaking efforts in recent years, Atmos Energy has:

- Formula rate mechanisms in place in four states that provide for an annual rate review and adjustment to rates.

- Infrastructure programs in place in the majority of our states that provide for an annual adjustment to rates for qualifying capital expenditures. Through our annual formula rate mechanisms and infrastructure programs, we have the ability to recover over 85 percent of our capital expenditures within six months and 99 percent within twelve months.
- Authorization in tariffs, statute or commission rules that allows us to defer certain elements of our cost of service such as depreciation, ad valorem taxes and pension costs, until they are included in rates.
- WNA mechanisms in seven states that serve to minimize the effects of weather on approximately 97 percent of our distribution Contribution Margin.
- The ability to recover the gas cost portion of bad debts in five states.

The following table provides a jurisdictional rate summary for our regulated operations as of September 30, 2018. This information is for regulatory purposes only and may not be representative of our actual financial position.

| Division | Jurisdiction | Effective Date of Last Rate/GRIP Action | Rate Base (thousands) ⁽¹⁾ | Authorized Rate of Return ⁽¹⁾ | Authorized Debt/Equity Ratio | Authorized Return on Equity ⁽¹⁾ |
|---------------------------|----------------------------------|---|--------------------------------------|--|------------------------------|--|
| Atmos Pipeline — Texas | Texas | 05/22/2018 | \$2,122,194 | 8.87% | 47/53 | 11.50% |
| Colorado-Kansas | Colorado | 05/03/2018 | 134,726 | 7.55% | 44/56 | 9.45% |
| | Colorado SSIR | 01/01/2018 | 29,855 | 7.82% | 48/52 | 9.60% |
| | Kansas | 03/17/2016 | 200,564 | (3) | (3) | (3) |
| | Kansas GSRS | 02/27/2018 | 12,514 | (3) | (3) | (3) |
| Kentucky/Mid-States | Kentucky | 05/03/2018 | 427,646 | 7.41% | 47/53 | 9.70% |
| | Tennessee ⁽⁸⁾ | 06/01/2017 | 302,953 | 7.49% | 47/53 | 9.80% |
| | Virginia | 12/27/2016 | 47,581 | (3) | (3) | (3) |
| Louisiana | Trans La | 05/01/2018 | 169,120 | 7.26% | 49/51 | 9.80% |
| | LGS | 07/01/2018 | 419,080 | 7.55% | 44/56 | 9.80% |
| Mid-Tex Cities | Texas ⁽⁹⁾ | 06/01/2017 | 2,362,937 ⁽²⁾ | 8.36% | 45/55 | 10.50% |
| Mid-Tex — Dallas | Texas | 02/14/2018 | (3) | (3) | (3) | (3) |
| Mississippi | Mississippi ⁽⁷⁾ | 01/01/2018 | 377,954 | 7.47% | 47/53 | 9.67% |
| | Mississippi - SIR ⁽⁷⁾ | 01/01/2018 | 70,141 | 7.60% | 47/53 | 9.92% |
| | Mississippi - SGR | 01/01/2018 | 23,718 | 8.70% | 47/53 | 12.00% |
| West Texas ⁽⁴⁾ | Texas ⁽¹⁰⁾ | 03/15/2017 | (3) | (3) | (3) | 10.50% |
| | Texas-GRIP | 06/05/2018 | 507,831 | 8.57% | 48/52 | 10.50% |

| Division | Jurisdiction | Bad Debt Rider ⁽⁵⁾ | Formula Rate | Infrastructure Mechanism | Performance Based Rate Program ⁽⁶⁾ | WNA Period |
|---------------------------|--------------|-------------------------------|--------------|--------------------------|---|------------------|
| Atmos Pipeline — Texas | Texas | No | Yes | Yes | N/A | N/A |
| Colorado-Kansas | Colorado | No | No | Yes | No | N/A |
| | Kansas | Yes | No | Yes | No | October-May |
| Kentucky/Mid-States | Kentucky | Yes | No | No | Yes | November-April |
| | Tennessee | Yes | Yes | No | Yes | October-April |
| | Virginia | Yes | No | Yes | No | January-December |
| Louisiana | Trans La | No | Yes | Yes | No | December-March |
| | LGS | No | Yes | Yes | No | December-March |
| Mid-Tex Cities | Texas | Yes | Yes | Yes | No | November-April |
| Mid-Tex — Dallas | Texas | Yes | Yes | Yes | No | November-April |
| Mississippi | Mississippi | No | Yes | Yes | Yes | November-April |
| West Texas ⁽⁴⁾ | Texas | Yes | Yes | Yes | No | October-May |

- (1) The rate base, authorized rate of return and authorized return on equity presented in this table are those from the most recent regulatory filing for each jurisdiction. These rate bases, rates of return and returns on equity are not necessarily indicative of current or future rate bases, rates of return or returns on equity.
- (2) The Mid-Tex rate base represents a “system-wide”, or 100 percent, of the Mid-Tex Division’s rate base.
- (3) A rate base, rate of return, return on equity or debt/equity ratio was not included in the respective state commission’s final decision.
- (4) The West Texas Cities includes all West Texas Division cities except Amarillo, Channing, Dalhart and Lubbock.
- (5) The bad debt rider allows us to recover from ratepayers the gas cost portion of uncollectible accounts.
- (6) The performance-based rate program provides incentives to distribution companies to minimize purchased gas costs by allowing the companies and their customers to share the purchased gas costs savings.
- (7) The Mississippi Public Service Commission approved a settlement at its meeting on October 23, 2018, which included a rate base of \$541.7 million, an authorized return of 7.81%, a debt/equity ratio of 45/55 and an authorized ROE of 10.24%. New rates were implemented November 1, 2018.
- (8) The Tennessee Public Utility Commission approved the Formula Rate Mechanism filing at its meeting on October 15, 2018, which included a rate base of \$351.8 million, an authorized return of 7.26%, a debt/equity ratio of 49/51 and an authorized ROE of 9.8%.
- (9) The Mid-Tex Cities approved the Formula Rate Mechanism filing with rates effective October 1, 2018, which included a rate base of \$2,587.3 million, an authorized return of 7.87%, a debt/equity ratio of 42/58 and an authorized ROE of 9.80%.
- (10) The West Texas Cities approved the Formula Rate Mechanism filing with rates effective October 1, 2018, which included a rate base of \$505.7 million, an authorized return of 7.87%, a debt/equity ratio of 42/58 and an authorized ROE of 9.80%.

Although substantial progress has been made in recent years to improve rate design and recovery of investment across our service areas, we are continuing to seek improvements in rate design to address cost variations and pursue tariffs that reduce regulatory lag associated with investments. Further, potential changes in federal energy policy, federal safety regulations and changing economic conditions will necessitate continued vigilance by the Company and our regulators in meeting the challenges presented by these external factors.

Recent Ratemaking Activity

Net operating income increases resulting from ratemaking activity totaling \$80.1 million, \$104.2 million and \$122.5 million, became effective in fiscal 2018, 2017 and 2016, as summarized below. The ratemaking outcomes for fiscal 2018 include the effect of tax reform legislation enacted effective January 1, 2018 and do not reflect the true economic benefit of the outcomes because they do not include the corresponding income tax benefit we will receive due to the decrease in our statutory tax rate.

| Rate Action | Annual Increase (Decrease) to Operating Income For the Fiscal Year Ended September 30 | | |
|--------------------------------|---|-------------------|-------------------|
| | 2018 | 2017 | 2016 |
| | (In thousands) | | |
| Annual formula rate mechanisms | \$ 92,472 | \$ 90,427 | \$ 114,974 |
| Rate case filings | (12,853) | 12,961 | 7,716 |
| Other ratemaking activity | 457 | 784 | (183) |
| | <u>\$ 80,076</u> | <u>\$ 104,172</u> | <u>\$ 122,507</u> |

Additionally, the following ratemaking efforts seeking \$52.8 million in annual operating income were initiated during fiscal 2018 but had not been completed as of September 30, 2018:

| Division | Rate Action | Jurisdiction | Operating Income Requested |
|---------------------|--------------------------------|----------------------------------|----------------------------|
| | | | (In thousands) |
| Mid-Tex | Formula Rate Mechanism | Mid-Tex Cities ⁽¹⁾⁽²⁾ | \$ 28,036 |
| Mid-Tex | Rate Case | ATM Cities ⁽¹⁾ | 4,252 |
| Mid-Tex | Rate Case | Environs ⁽¹⁾⁽⁷⁾ | (1,875) |
| Mississippi | Infrastructure Mechanism | Mississippi ⁽¹⁾⁽³⁾ | 7,976 |
| Mississippi | Formula Rate Mechanism | Mississippi ⁽¹⁾⁽³⁾ | 4,119 |
| Kentucky/Mid-States | Formula Rate Mechanism | Tennessee ⁽¹⁾⁽⁴⁾ | (5,032) |
| Kentucky/Mid-States | Formula Rate Mechanism True-Up | Tennessee ⁽¹⁾⁽⁵⁾ | (3,220) |
| Kentucky/Mid-States | Rate Case | Kentucky ⁽¹⁾ | 14,424 |
| Kentucky/Mid-States | Rate Case | Virginia ⁽¹⁾ | 605 |
| West Texas | Formula Rate Mechanism | WT Cities ⁽¹⁾⁽⁶⁾ | 4,030 |
| West Texas | Rate Case | Environs ⁽¹⁾⁽⁷⁾ | (485) |
| | | | \$ 52,830 |

(1) The filing amount reflects a 21% federal income tax rate resulting from the Tax Cuts and Jobs Act of 2017 (TCJA).

(2) The Mid-Tex Cities approved a rate increase of \$17.6 million effective October 1, 2018.

(3) The Mississippi Public Service Commission approved a settlement at its meeting on October 23, 2018, for a combined \$7.0 million increase. New rates were implemented November 1, 2018.

(4) The Tennessee Public Utility Commission approved the Formula Rate Mechanism filing, which included \$0.4 million related to the May 2017 true-up, at its October 15, 2018 meeting.

(5) The Tennessee Formula Rate Mechanism Test Period Ended May 2018 reflects the discontinuance of the prior year true-up.

(6) The West Texas Cities approved a rate increase of \$2.8 million effective October 1, 2018.

(7) Settlement pending Texas Railroad Commission approval.

Our recent ratemaking activity is discussed in greater detail below.

Annual Formula Rate Mechanisms

As an instrument to reduce regulatory lag, formula rate mechanisms allow us to refresh our rates on an annual basis without filing a formal rate case. However, these filings still involve discovery by the appropriate regulatory authorities prior to the final determination of rates under these mechanisms. The following table summarizes our annual formula rate mechanisms by state.

| State | Annual Formula Rate Mechanisms | |
|-------------|--|---|
| | Infrastructure Programs | Formula Rate Mechanisms |
| Colorado | System Safety and Integrity Rider (SSIR) | — |
| Kansas | Gas System Reliability Surcharge (GSRS) | — |
| Kentucky | Pipeline Replacement Program (PRP) | — |
| Louisiana | (1) | Rate Stabilization Clause (RSC) |
| Mississippi | System Integrity Rider (SIR) | Stable Rate Filing (SRF), Supplemental Growth Filing (SGR) |
| Tennessee | — | Annual Rate Mechanism (ARM) |
| Texas | Gas Reliability Infrastructure Program (GRIP), (1) | Dallas Annual Rate Review (DARR), Rate Review Mechanism (RRM) |
| Virginia | Steps to Advance Virginia Energy (SAVE) | — |

(1) Infrastructure mechanisms in Texas and Louisiana allow for the deferral of all expenses associated with capital expenditures incurred pursuant to these rules, which primarily consists of interest, depreciation and other taxes (Texas only), until the next rate proceeding (rate case or annual rate filing), at which time investment and costs would be recoverable through base rates.

The following table summarizes our annual formula rate mechanisms with effective dates during the fiscal years ended September 30, 2018, 2017 and 2016:

| Division | Jurisdiction | Test Year Ended | Increase (Decrease) in Annual Operating Income (In thousands) | Effective Date |
|------------------------|--|-----------------|--|-------------------|

| Total 2016 Filings | | | <u>\$ 114,974</u> | |

- (1) The operating income reflects a 21% federal income tax rate resulting from the TCJA.
- (2) In our next SRF filing, the SGR rate base will be combined with the SRF rate base, per Commission order.
- (3) The Company completed our Steps to Advance Virginia Energy (SAVE) program. On October 1, 2017 a refund factor was removed from the rate resulting in an operating income increase of \$0.3 million.

Rate Case Filings

A rate case is a formal request from Atmos Energy to a regulatory authority to increase rates that are charged to customers. Rate cases may also be initiated when the regulatory authorities request us to justify our rates. This process is referred to as a “show cause” action. Adequate rates are intended to provide for recovery of the Company’s costs as well as a fair rate of return to our shareholders and ensure that we continue to safely deliver reliable, reasonably priced natural gas service to our customers. The following table summarizes our recent rate cases:

| Division | State | Increase (Decrease) in Annual Operating Income (In thousands) | Effective Date |
|--------------------------------|-------------------------------|--|----------------|
| <i>2018 Rate Case Filings:</i> | | | |
| Colorado-Kansas | Colorado ⁽¹⁾ | \$ (241) | 05/03/2018 |
| Kentucky/Mid-States | Kentucky ⁽¹⁾ | (7,504) | 05/03/2018 |
| Mid-Tex | City of Dallas ⁽¹⁾ | (5,108) | 02/14/2018 |
| Total 2018 Rate Case Filings | | <u>\$ (12,853)</u> | |
| <i>2017 Rate Case Filings:</i> | | | |
| Atmos Pipeline - Texas | Texas | \$ 12,955 | 08/01/2017 |
| Kentucky/Mid-States | Virginia | 6 | 12/27/2016 |
| Total 2017 Rate Case Filings | | <u>\$ 12,961</u> | |
| <i>2016 Rate Case Filings:</i> | | | |
| Kentucky/Mid-States | Kentucky | \$ 2,723 | 08/15/2016 |
| Kentucky/Mid-States | Virginia | 537 | 04/01/2016 |
| Colorado-Kansas | Kansas | 2,372 | 03/17/2016 |
| Colorado-Kansas | Colorado | 2,084 | 01/01/2016 |
| Total 2016 Rate Case Filings | | <u>\$ 7,716</u> | |

- (1) The operating income reflects a 21% federal income tax rate resulting from the TCJA.

Other Ratemaking Activity

The following table summarizes other ratemaking activity during the fiscal years ended September 30, 2018, 2017 and 2016:

| Division | Jurisdiction | Rate Activity | Increase (Decrease) in Annual Operating Income (In thousands) | Effective Date |
|---------------------------------------|---------------------|---------------------------|--|---------------------------|
| 2018 Other Rate Activity: | | | | |
| Colorado-Kansas | Kansas | Ad Valorem ⁽¹⁾ | \$ 457 | 02/01/2018 |
| Total 2018 Other Rate Activity | | | \$ 457 | |
| 2017 Other Rate Activity: | | | | |
| Colorado-Kansas | Kansas | Ad-Valorem ⁽¹⁾ | \$ 784 | 02/01/2017 |
| Total 2017 Other Rate Activity | | | \$ 784 | |
| 2016 Other Rate Activity: | | | | |
| Colorado-Kansas | Kansas | Ad-Valorem ⁽¹⁾ | \$ (183) | 02/01/2016 |
| Total 2016 Other Rate Activity | | | \$ (183) | |

(1) The Ad Valorem filing relates to property taxes that are either over or uncollected compared to the amount included in our Kansas service area's base rates.

Other Regulation

We are regulated by various state or local public utility authorities. We are also subject to regulation by the United States Department of Transportation with respect to safety requirements in the operation and maintenance of our transmission and distribution facilities. In addition, our operations are also subject to various state and federal laws regulating environmental matters. From time to time, we receive inquiries regarding various environmental matters. We believe that our properties and operations substantially comply with, and are operated in substantial conformity with, applicable safety and environmental statutes and regulations. There are no administrative or judicial proceedings arising under environmental quality statutes pending or known to be contemplated by governmental agencies which would have a material adverse effect on us or our operations. Our environmental claims have arisen primarily from former manufactured gas plant sites. The Pipeline and Hazardous Materials Safety Administration (PHMSA), within the U.S. Department of Transportation, develops and enforces regulations for the safe, reliable and environmentally sound operation of the pipeline transportation system. The PHMSA pipeline safety statutes provide for states to assume safety authority over intrastate and natural gas pipelines. State pipeline safety programs are responsible for adopting and enforcing the federal and state pipeline safety regulations for intrastate natural gas transmission and distribution pipelines.

The Federal Energy Regulatory Commission (FERC) allows, pursuant to Section 311 of the Natural Gas Policy Act (NGA), gas transportation services through our Atmos Pipeline—Texas assets “on behalf of” interstate pipelines or local distribution companies served by interstate pipelines, without subjecting these assets to the jurisdiction of the FERC under the NGA. Additionally, the FERC has regulatory authority over the use and release of interstate pipeline and storage capacity. The FERC also has authority to detect and prevent market manipulation and to enforce compliance with FERC’s other rules, policies and orders by companies engaged in the sale, purchase, transportation or storage of natural gas in interstate commerce. We have taken what we believe are the necessary and appropriate steps to comply with these regulations.

The SEC and the Commodities Futures Trading Commission, pursuant to the Dodd–Frank Act, established numerous regulations relating to U.S. financial markets. We enacted procedures and modified existing business practices and contractual arrangements to comply with such regulations. There are, however, some rulemaking proceedings that have not yet been finalized, including those relating to capital and margin rules for (non–cleared) swaps. We do not expect these rules to directly impact our business practices or collateral requirements. However, depending on the substance of these final rules, in addition to certain international regulatory requirements still under development that are similar to Dodd–Frank, our swap counterparties could be subject to additional and potentially significant capitalization requirements. These regulations could motivate counterparties to increase our collateral requirements or cash postings.

Competition

Although our regulated distribution operations are not currently in significant direct competition with any other distributors of natural gas to residential and commercial customers within our service areas, we do compete with other natural gas suppliers and suppliers of alternative fuels for sales to industrial customers. We compete in all aspects of our business with

alternative energy sources, including, in particular, electricity. Electric utilities offer electricity as a rival energy source and compete for the space heating, water heating and cooking markets. Promotional incentives, improved equipment efficiencies and promotional rates all contribute to the acceptability of electrical equipment. The principal means to compete against alternative fuels is lower prices, and natural gas historically has maintained its price advantage in the residential, commercial and industrial markets.

Our pipeline and storage operations have historically faced competition from other existing intrastate pipelines seeking to provide or arrange transportation, storage and other services for customers. In the last few years, several new pipelines have been completed, which has increased the level of competition in this segment of our business.

Employees

At September 30, 2018, we had 4,628 employees, consisting of 4,564 employees in our distribution operations and 64 employees in our pipeline and storage operations.

Available Information

Our Annual Reports on Form 10-K, Quarterly Reports on Form 10-Q, Current Reports on Form 8-K and other reports, and amendments to those reports, and other forms that we file with or furnish to the Securities and Exchange Commission (SEC) at their website, www.sec.gov, are also available free of charge at our website, www.atmosenergy.com, under “Publications and Filings” under the “Investors” tab, as soon as reasonably practicable, after we electronically file these reports with, or furnish these reports to, the SEC. We will also provide copies of these reports free of charge upon request to Shareholder Relations at the address and telephone number appearing below:

Shareholder Relations
Atmos Energy Corporation

Corporate Governance

In accordance with and pursuant to relevant related rules and regulations of the SEC as well as corporate governance-related listing standards of the New York Stock Exchange (NYSE), the Board of Directors of the Company has established and periodically updated our Corporate Governance Guidelines and Code of Conduct, which is applicable to all directors, officers and employees of the Company. In addition, in accordance with and pursuant to such NYSE listing standards, our Chief Executive Officer during fiscal 2018, Michael E. Haefner, certified to the New York Stock Exchange that he was not aware of any violations by the Company of NYSE corporate governance listing standards. The Board of Directors also annually reviews and updates, if necessary, the charters for each of its Audit, Human Resources and Nominating and Corporate Governance Committees. All of the foregoing documents are posted on the Corporate Responsibility page of our website. We will also provide copies of all corporate governance documents free of charge upon request to Shareholder Relations at the address listed above.

ITEM 1A. Risk Factors.

Our financial and operating results are subject to a number of risk factors, many of which are not within our control. Although we have tried to discuss key risk factors below, please be aware that other or new risks may prove to be important in the future. Investors should carefully consider the following discussion of risk factors as well as other information appearing in this report. These factors include the following:

We are subject to state and local regulations that affect our operations and financial results.

We are subject to regulatory oversight from various state and local regulatory authorities in the eight states that we serve. Therefore, our returns are continuously monitored and are subject to challenge for their reasonableness by the appropriate regulatory authorities or other third-party intervenors. In the normal course of business, as a regulated entity, we often need to place assets in service and establish historical test periods before rate cases that seek to adjust our allowed returns to recover that investment can be filed. Further, the regulatory review process can be lengthy in the context of traditional ratemaking. Because of this process, we suffer the negative financial effects of having placed assets in service without the benefit of rate relief, which is commonly referred to as “regulatory lag.”

However, in the last several years, a number of regulatory authorities in the states we serve have approved rate mechanisms that provide for annual adjustments to rates that allow us to recover the cost of investments made to replace existing infrastructure or reflect changes in our cost of service. These mechanisms work to effectively reduce the regulatory lag

inherent in the ratemaking process. However, regulatory lag could significantly increase if the regulatory authorities modify or terminate these rate mechanisms. The regulatory process also involves the risk that regulatory authorities may (i) review our purchases of natural gas and adjust the amount of our gas costs that we pass through to our customers or (ii) limit the costs we may have incurred from our cost of service that can be recovered from customers.

We are also subject to laws, regulations and other legal requirements enacted or adopted by federal, state and local governmental authorities relating to protection of the environment and health and safety matters, including those that govern discharges of substances into the air and water, the management and disposal of hazardous substances and waste, the clean-up of contaminated sites, groundwater quality and availability, plant and wildlife protection, as well as work practices related to employee health and safety. Environmental legislation also requires that our facilities, sites and other properties associated with our operations be operated, maintained, abandoned and reclaimed to the satisfaction of applicable regulatory authorities. Failure to comply with these laws, regulations, permits and licenses may expose us to fines, penalties or interruptions in our operations that could be significant to our financial results. In addition, existing environmental regulations may be revised or our operations may become subject to new regulations.

Some of our operations are subject to increased federal regulatory oversight that could affect our operations and financial results.

FERC has regulatory authority over some of our operations, including the use and release of interstate pipeline and storage capacity. FERC has adopted rules designed to prevent market power abuse and market manipulation and to promote compliance with FERC's other rules, policies and orders by companies engaged in the sale, purchase, transportation or storage of natural gas in interstate commerce. These rules carry increased penalties for violations. Although we have taken steps to structure current and future transactions to comply with applicable current FERC regulations, changes in FERC regulations or their interpretation by FERC or additional regulations issued by FERC in the future could also adversely affect our business, financial condition or financial results.

We may experience increased federal, state and local regulation of the safety of our operations.

The safety and protection of the public, our customers and our employees is our top priority. We constantly monitor and maintain our pipeline and distribution systems to ensure that natural gas is delivered safely, reliably and efficiently through our network of more than 75,000 miles of distribution and transmission lines. However, in recent years, natural gas distribution and pipeline companies have faced increasing federal, state and local oversight of the safety of their operations. Although we believe these costs should be ultimately recoverable through our rates, the costs of complying with new laws and regulations may have at least a short-term adverse impact on our operating costs and financial results.

Distributing, transporting and storing natural gas involve risks that may result in accidents and additional operating costs.

Our operations involve a number of hazards and operating risks inherent in storing and transporting natural gas that could affect the public safety and reliability of our distribution system. While Atmos Energy, with the support from each of its regulatory commissions, is accelerating the replacement of aging pipeline infrastructure, operating issues such as leaks, accidents, equipment problems and incidents, including explosions and fire, could result in legal liability, repair and remediation costs, increased operating costs, significant increased capital expenditures, regulatory fines and penalties and other costs and a loss of customer confidence. We maintain liability and property insurance coverage in place for many of these hazards and risks. However, because some of our transmission pipeline and storage facilities are near or are in populated areas, any loss of human life or adverse financial results resulting from such events could be large. If these events were not fully covered by our general liability and property insurance, which policies are subject to certain limits and deductibles, our operations or financial results could be adversely affected.

Our growth in the future may be limited by the nature of our business, which requires extensive capital spending.

Our operations are capital-intensive. We must make significant capital expenditures on a long-term basis to modernize our distribution and transmission system to improve the safety and reliability and to comply with the safety rules and regulations issued by the regulatory authorities responsible for the service areas we operate. In addition, we must continually build new capacity to serve the growing needs of the communities we serve. The magnitude of these expenditures may be affected by a number of factors, including new regulations, the general state of the economy and weather.

The liquidity required to fund our working capital, capital expenditures and other cash needs is provided from a combination of internally generated cash flows and external debt and equity financing. The cost and availability of borrowing funds from third party lenders or issuing equity is dependent on the liquidity of the credit markets, interest rates and other market conditions. This in turn may limit the amount of funds we can invest in our infrastructure.

The Company is dependent on continued access to the credit and capital markets to execute our business strategy.

Our long-term debt is currently rated as "investment grade" by Standard & Poor's Corporation and Moody's Investors Service, Inc. Similar to most companies, we rely upon access to both short-term and long-term credit and capital markets to

satisfy our liquidity requirements. If adverse credit conditions were to cause a significant limitation on our access to the private credit and public capital markets, we could see a reduction in our liquidity. A significant reduction in our liquidity could in turn trigger a negative change in our ratings outlook or even a reduction in our credit ratings by one or more of the credit rating agencies. Such a downgrade could further limit our access to private credit and/or public capital markets and increase our costs of borrowing.

While we believe we can meet our capital requirements from our operations and the sources of financing available to us, we can provide no assurance that we will continue to be able to do so in the future, especially if the market price of natural gas increases significantly in the near term. The future effects on our business, liquidity and financial results of a deterioration of current conditions in the credit and capital markets could be material and adverse to us, both in the ways described above or in other ways that we do not currently anticipate.

We are exposed to market risks that are beyond our control, which could adversely affect our financial results.

We are subject to market risks beyond our control, including (i) commodity price volatility caused by market supply and demand dynamics, counterparty performance or counterparty creditworthiness, and (ii) interest rate risk. We are generally insulated from commodity price risk through our purchased gas cost mechanisms. With respect to interest rate risk, we have been operating in a relatively low interest-rate environment in recent years compared to historical norms for both short and long-term interest rates. However, increases in interest rates could adversely affect our future financial results to the extent that we do not recover our actual interest expense in our rates.

The concentration of our operations in the State of Texas exposes our operations and financial results to economic conditions, weather patterns and regulatory decisions in Texas.

Approximately 70 percent of our consolidated operations are located in the State of Texas. This concentration of our business in Texas means that our operations and financial results may be significantly affected by changes in the Texas economy in general, weather patterns and regulatory decisions by state and local regulatory authorities in Texas.

A deterioration in economic conditions could adversely affect our customers and negatively impact our financial results.

Any adverse changes in economic conditions in the United States, especially in the states in which we operate, could adversely affect the financial resources of many domestic households. As a result, our customers could seek to use less gas and it may be more difficult for them to pay their gas bills. This would likely lead to slower collections and higher than normal levels of accounts receivable. This, in turn, could increase our financing requirements. Additionally, should economic conditions deteriorate, our industrial customers could seek alternative energy sources, which could result in lower sales volumes.

Increased gas costs could adversely impact our customer base and customer collections and increase our level of indebtedness.

Rapid increases in the costs of purchased gas would cause us to experience a significant increase in short-term debt. We must pay suppliers for gas when it is purchased, which can be significantly in advance of when these costs may be recovered through the collection of monthly customer bills for gas delivered. Increases in purchased gas costs also slow our natural gas distribution collection efforts as customers are more likely to delay the payment of their gas bills, leading to higher than normal accounts receivable. This could result in higher short-term debt levels, greater collection efforts and increased bad debt expense.

If contracted gas supplies, interstate pipeline and/or storage services are not available or delivered in a timely manner, our ability to meet our customers' natural gas requirements may be impaired and our financial condition may be adversely affected.

In order to meet our customers' annual and seasonal natural gas demands, we must obtain a sufficient supply of natural gas, interstate pipeline capacity and storage capacity. If we are unable to obtain these, either from our suppliers' inability to deliver the contracted commodity or the inability to secure replacement quantities, our financial condition and results of operations may be adversely affected. If a substantial disruption to or reduction in interstate natural gas pipelines' transmission and storage capacity occurred due to operational failures or disruptions, legislative or regulatory actions, hurricanes, tornadoes, floods, terrorist or cyber-attacks or acts of war, our operations or financial results could be adversely affected.

Our operations are subject to increased competition.

In residential and commercial customer markets, our distribution operations compete with other energy products, such as electricity and propane. Our primary product competition is with electricity for heating, water heating and cooking. Increases in the price of natural gas could negatively impact our competitive position by decreasing the price benefits of natural gas to the consumer. This could adversely impact our business if our customer growth slows or if our customers further conserve their use of gas, resulting in reduced gas purchases and customer billings.

In the case of industrial customers, such as manufacturing plants, adverse economic conditions, including higher gas costs, could cause these customers to use alternative sources of energy, such as electricity, or bypass our systems in favor of special competitive contracts with lower per-unit costs. Our pipeline and storage operations historically have faced limited competition from other existing intrastate pipelines and gas marketers seeking to provide or arrange transportation, storage and other services for customers. However, in the last few years, several new pipelines have been completed, which has increased the level of competition in this segment of our business.

Adverse weather conditions could affect our operations or financial results.

We have weather-normalized rates for approximately 97 percent of our residential and commercial meters in our distribution operations, which substantially mitigates the adverse effects of warmer-than-normal weather for meters in those service areas. However, there is no assurance that we will continue to receive such regulatory protection from adverse weather in our rates in the future. The loss of such weather-normalized rates could have an adverse effect on our operations and financial results. In addition, our operating results may continue to vary somewhat with the actual temperatures during the winter heating season. Additionally, sustained cold weather could challenge our ability to adequately meet customer demand in our operations.

The costs of providing health care benefits, pension and postretirement health care benefits and related funding requirements may increase substantially.

We provide health care benefits, a cash-balance pension plan and postretirement health care benefits to eligible full-time employees. The costs of providing health care benefits to our employees could significantly increase over time due to rapidly increasing health care inflation, and any future legislative changes related to the provision of health care benefits. The impact of additional costs which are likely to be passed on to the Company is difficult to measure at this time.

The costs of providing a cash-balance pension plan to eligible full-time employees prior to 2011 and postretirement health care benefits to eligible full-time employees and related funding requirements could be influenced by changes in the market value of the assets funding our pension and postretirement health care plans. Any significant declines in the value of these investments due to sustained declines in equity markets or a reduction in bond yields could increase the costs of our pension and postretirement health care plans and related funding requirements in the future. Further, our costs of providing such benefits and related funding requirements are also subject to a number of factors, including (i) changing demographics, including longer life expectancy of beneficiaries and an expected increase in the number of eligible former employees over the next five to ten years; (ii) various actuarial calculations and assumptions which may differ materially from actual results due primarily to changing market and economic conditions, including changes in interest rates, and higher or lower withdrawal rates; and (iii) future government regulation.

The costs to the Company of providing these benefits and related funding requirements could also increase materially in the future, should there be a material reduction in the amount of the recovery of these costs through our rates or should significant delays develop in the timing of the recovery of such costs, which could adversely affect our financial results.

The inability to continue to hire, train and retain operational, technical and managerial personnel could adversely affect our results of operations.

Although the average age of the employee base of Atmos Energy is not significantly changing year over year, there are still a number of employees who will become eligible to retire within the next five to 10 years. If we were unable to hire appropriate personnel or contractors to fill future needs, the Company could encounter operating challenges and increased costs, primarily due to a loss of knowledge, errors due to inexperience or the lengthy time period typically required to adequately train replacement personnel. In addition, higher costs could result from loss of productivity or increased safety compliance issues. The inability to hire, train and retain new operational, technical and managerial personnel adequately and to transfer institutional knowledge and expertise could adversely affect our ability to manage and operate our business. If we were unable to hire, train and retain appropriately qualified personnel, our results of operations could be adversely affected.

The operations and financial results of the Company could be adversely impacted as a result of climate change or related additional legislation or regulation in the future.

To the extent climate change occurs, our businesses could be adversely impacted, although we believe it is likely that any such resulting impacts would occur very gradually over a long period of time and thus would be difficult to quantify with any degree of specificity. To the extent climate change would result in warmer temperatures in our service territories, financial results could be adversely affected through lower gas volumes and revenues. Such climate change could also cause shifts in population, including customers moving away from our service territories near the Gulf Coast in Louisiana and Mississippi.

Another possible climate change would be more frequent and more severe weather events, such as hurricanes and tornadoes, which could increase our costs to repair damaged facilities and restore service to our customers. If we were unable to deliver natural gas to our customers, our financial results would be impacted by lost revenues, and we generally would have to

seek approval from regulators to recover restoration costs. To the extent we would be unable to recover those costs, or if higher rates resulting from our recovery of such costs would result in reduced demand for our services, our future business, financial condition or financial results could be adversely impacted.

In addition, there have been a number of federal and state legislative and regulatory initiatives proposed in recent years in an attempt to control or limit the effects of global warming and overall climate change, including greenhouse gas emissions, such as carbon dioxide. The adoption of this type of legislation by Congress or similar legislation by states or the adoption of related regulations by federal or state governments mandating a substantial reduction in greenhouse gas emissions in the future could have far-reaching and significant impacts on the energy industry. Such new legislation or regulations could result in increased compliance costs for us or additional operating restrictions on our business, affect the demand for natural gas or impact the prices we charge to our customers. At this time, we cannot predict the potential impact of such laws or regulations that may be adopted on our future business, financial condition or financial results.

Cyber-attacks or acts of cyber-terrorism could disrupt our business operations and information technology systems or result in the loss or exposure of confidential or sensitive customer, employee or Company information.

Our business operations and information technology systems may be vulnerable to an attack by individuals or organizations intending to disrupt our business operations and information technology systems, even though the Company has implemented policies, procedures and controls to prevent and detect these activities. We use our information technology systems to manage our distribution and intrastate pipeline and storage operations and other business processes. Disruption of those systems could adversely impact our ability to safely deliver natural gas to our customers, operate our pipeline and storage systems or serve our customers timely. Accordingly, if such an attack or act of terrorism were to occur, our operations and financial results could be adversely affected.

In addition, we use our information technology systems to protect confidential or sensitive customer, employee and Company information developed and maintained in the normal course of our business. Any attack on such systems that would result in the unauthorized release of customer, employee or other confidential or sensitive data could have a material adverse effect on our business reputation, increase our costs and expose us to additional material legal claims and liability. Even though we have insurance coverage in place for many of these cyber-related risks, if such an attack or act of terrorism were to occur, our operations and financial results could be adversely affected to the extent not fully covered by such insurance coverage.

Natural disasters, terrorist activities or other significant events could adversely affect our operations or financial results.

Natural disasters are always a threat to our assets and operations. In addition, the threat of terrorist activities could lead to increased economic instability and volatility in the price of natural gas that could affect our operations. Also, companies in our industry may face a heightened risk of exposure to actual acts of terrorism, which could subject our operations to increased risks. As a result, the availability of insurance covering such risks may become more limited, which could increase the risk that an event could adversely affect our operations or financial results.

ITEM 1B. *Unresolved Staff Comments.*

Not applicable.

ITEM 2. *Properties.*

Distribution, transmission and related assets

At September 30, 2018, in our distribution segment, we owned an aggregate of 70,071 miles of underground distribution and transmission mains throughout our distribution systems. These mains are located on easements or rights-of-way. We maintain our mains through a program of continuous inspection and repair and believe that our system of mains is in good condition. Through our pipeline and storage segment we owned 5,678 miles of gas transmission lines as well.

Storage Assets

We own underground gas storage facilities in several states to supplement the supply of natural gas in periods of peak demand. The following table summarizes certain information regarding our underground gas storage facilities at September 30, 2018:

| State | Usable Capacity (Mcf) | Cushion Gas (Mcf) ⁽¹⁾ | Total Capacity (Mcf) | Maximum Daily Delivery Capability (Mcf) |
|-------------------------------------|-----------------------|----------------------------------|----------------------|---|
| <i>Distribution Segment</i> | | | | |
| Kentucky | 7,956,991 | 9,562,283 | 17,519,274 | 158,100 |
| Kansas | 3,239,000 | 2,300,000 | 5,539,000 | 45,000 |
| Mississippi | 1,907,571 | 2,442,917 | 4,350,488 | 31,000 |
| <i>Total</i> | 13,103,562 | 14,305,200 | 27,408,762 | 234,100 |
| <i>Pipeline and Storage Segment</i> | | | | |
| Texas | 46,083,549 | 15,878,025 | 61,961,574 | 1,710,000 |
| Louisiana | 411,040 | 256,900 | 667,940 | 56,000 |
| <i>Total</i> | 46,494,589 | 16,134,925 | 62,629,514 | 1,766,000 |
| Total | 59,598,151 | 30,440,125 | 90,038,276 | 2,000,100 |

(1) Cushion gas represents the volume of gas that must be retained in a facility to maintain reservoir pressure.

Additionally, we contract for storage service in underground storage facilities on many of the interstate and intrastate pipelines serving us to supplement our proprietary storage capacity. The following table summarizes our contracted storage capacity at September 30, 2018:

| Segment | Division/Company | Maximum Storage Quantity (MMBtu) | Maximum Daily Withdrawal Quantity (MDWQ) ⁽¹⁾ |
|--|------------------------------------|----------------------------------|---|
| <i>Distribution Segment</i> | | | |
| | Colorado-Kansas Division | 6,129,562 | 136,996 |
| | Kentucky/Mid-States Division | 8,175,103 | 226,739 |
| | Louisiana Division | 2,536,779 | 174,805 |
| | Mid-Tex Division | 5,500,000 | 225,000 |
| | Mississippi Division | 5,083,801 | 163,627 |
| | West Texas Division | 5,000,000 | 161,000 |
| <i>Total</i> | | 32,425,245 | 1,088,167 |
| <i>Pipeline and Storage Segment</i> | | | |
| | Trans Louisiana Gas Pipeline, Inc. | 1,000,000 | 47,500 |
| Total Contracted Storage Capacity | | 33,425,245 | 1,135,667 |

(1) Maximum daily withdrawal quantity (MDWQ) amounts will fluctuate depending upon the season and the month. Unless otherwise noted, MDWQ amounts represent the MDWQ amounts as of November 1, which is the beginning of the winter heating season.

Offices

Our administrative offices and corporate headquarters are consolidated in a leased facility in Dallas, Texas. We also maintain field offices throughout our service territory, some of which are located in leased facilities.

ITEM 3. Legal Proceedings.

See Note 11 to the consolidated financial statements, which is incorporated in this Item 3 by reference.

ITEM 4. Mine Safety Disclosures.

Not applicable.

PART II

ITEM 5. *Market for Registrant’s Common Equity, Related Stockholder Matters and Issuer Purchases of Equity Securities.*

Our stock trades on the New York Stock Exchange under the trading symbol “ATO.” The dividends paid per share of our common stock for fiscal 2018 and 2017 are listed below.

|-----------------------|----------------|----------------|
| Quarter ended: | | |
| December 31 | \$ 0.485 | \$ 0.450 |
| March 31 | 0.485 | 0.450 |
| June 30 | 0.485 | 0.450 |
| September 30 | 0.485 | 0.450 |
| | <u>\$ 1.94</u> | <u>\$ 1.80</u> |

Dividends are payable at the discretion of our Board of Directors out of legally available funds. The Board of Directors typically declares dividends in the same fiscal quarter in which they are paid. The number of record holders of our common stock on October 31, 2018 was 12,550. Future payments of dividends, and the amounts of these dividends, will depend on our financial condition, results of operations, capital requirements and other factors. We sold no securities during fiscal 2018 that were not registered under the Securities Act of 1933, as amended.

Performance Graph

The performance graph and table below compares the yearly percentage change in our total return to shareholders for the last five fiscal years with the total return of the S&P 500 Stock Index (S&P 500) and the cumulative total return of a customized peer company group, the Comparison Company Index. The Comparison Company Index is comprised of natural gas distribution companies with similar revenues, market capitalizations and asset bases to that of the Company. The graph and table below assume that \$100.00 was invested on September 30, 2013 in our common stock, the S&P 500 and in the common stock of the companies in the Comparison Company Indices, as well as a reinvestment of dividends paid on such investments throughout the period.

**Comparison of Five-Year Cumulative Total Return
among Atmos Energy Corporation, S&P 500 Index
and Comparison Company Index**

| | Cumulative Total Return | | | | | |
|--------------------------|-------------------------|-----------|-----------|-----------|-----------|-----------|
| | 9/30/2013 | 9/30/2014 | 9/30/2015 | 9/30/2016 | 9/30/2017 | 9/30/2018 |
| Atmos Energy Corporation | 100.00 | 115.52 | 145.03 | 190.13 | 218.98 | 250.80 |
| S&P 500 Stock Index | 100.00 | 119.73 | 119.00 | 137.36 | 162.92 | 192.10 |
| Peer Group | 100.00 | 116.03 | 128.49 | 158.62 | 185.66 | 196.95 |

The Comparison Company Index reflects the cumulative total return of companies in our peer group, which is comprised of a hybrid group of utility companies, primarily natural gas distribution companies, recommended by our independent executive compensation consulting firm and approved by the Board of Directors. The companies in the index are Alliant Energy Corporation, Ameren Corporation, CenterPoint Energy, Inc., CMS Energy Corporation, DTE Energy Company, National Fuel Gas Company, NiSource Inc., ONE Gas, Inc., Spire Inc. (formerly The Laclede Group, Inc.), Vectren Corporation, WEC Energy Group, Inc., WGL Holdings, Inc., and Xcel Energy, Inc.

(1) WGL Holdings Inc. was acquired prior to September 30, 2018. As a result, the cumulative total return of this company is not included in the Comparison Company Index represented in the graph above.

The following table sets forth the number of securities authorized for issuance under our equity compensation plans at September 30, 2018.

| | Number of securities to be issued upon exercise of outstanding options, restricted stock units, warrants and rights | Weighted-average exercise price of outstanding options, warrants and rights | Number of securities remaining available for future issuance under equity compensation plans (excluding securities reflected in column (a)) |
|---|---|---|---|
| | (a) | (b) | (c) |
| Equity compensation plans approved by security holders: | | | |
| 1998 Long-Term Incentive Plan | 1,041,519 ⁽¹⁾ | \$ — | 1,752,235 |
| Total equity compensation plans approved by security holders | 1,041,519 | — | 1,752,235 |
| Equity compensation plans not approved by security holders | | | |
| | — | — | — |
| Total | 1,041,519 | \$ — | 1,752,235 |

(1) Comprised of a total of 422,996 time-lapse restricted stock units, 343,952 director share units and 274,571 performance-based restricted stock units at the target level of performance granted under our 1998 Long-Term Incentive Plan.

ITEM 6. *Selected Financial Data.*

The following table sets forth selected financial data of the Company and should be read in conjunction with the consolidated financial statements included herein.

| | Fiscal Year Ended September 30 | | | | |
|---|--------------------------------|---------------|---------------|--------------|--------------|
| | 2018 | 2017 | 2016 | 2015 | 2014 |
| (In thousands, except per share data) | | | | | |
| Results of Operations | | | | | |
| Operating revenues | \$ 3,115,546 | \$ 2,759,735 | \$ 2,454,648 | \$ 2,926,985 | \$ 3,243,904 |
| Contribution margin | \$ 1,947,698 | \$ 1,834,199 | \$ 1,708,456 | \$ 1,631,310 | \$ 1,521,844 |
| Income from continuing operations | \$ 603,064 | \$ 382,711 | \$ 345,542 | \$ 305,623 | \$ 270,331 |
| Net income | \$ 603,064 | \$ 396,421 | \$ 350,104 | \$ 315,075 | \$ 289,817 |

| Total capitalization | \$ 7,263,616 | \$ 6,965,711 | \$ 5,651,838 | \$ 5,632,312 | \$ 5,528,520 |

(1) Amounts shown are net of assets held for sale related to the divestiture of our natural gas marketing business for fiscal years 2014 through 2016.

ITEM 7. Management's Discussion and Analysis of Financial Condition and Results of Operations.**INTRODUCTION**

This section provides management's discussion of the financial condition, changes in financial condition and results of operations of Atmos Energy Corporation and its consolidated subsidiaries with specific information on results of operations and liquidity and capital resources. It includes management's interpretation of our financial results, the factors affecting these results, the major factors expected to affect future operating results and future investment and financing plans. This discussion should be read in conjunction with our consolidated financial statements and notes thereto.

Several factors exist that could influence our future financial performance, some of which are described in Item 1A above, "Risk Factors". They should be considered in connection with evaluating forward-looking statements contained in this report or otherwise made by or on behalf of us since these factors could cause actual results and conditions to differ materially from those set out in such forward-looking statements.

Cautionary Statement for the Purposes of the Safe Harbor under the Private Securities Litigation Reform Act of 1995

The statements contained in this Annual Report on Form 10-K may contain "forward-looking statements" within the meaning of Section 27A of the Securities Act of 1933 and Section 21E of the Securities Exchange Act of 1934. All statements other than statements of historical fact included in this Report are forward-looking statements made in good faith by us and are intended to qualify for the safe harbor from liability established by the Private Securities Litigation Reform Act of 1995. When used in this Report, or any other of our documents or oral presentations, the words "anticipate", "believe", "estimate", "expect", "forecast", "goal", "intend", "objective", "plan", "projection", "seek", "strategy" or similar words are intended to identify forward-looking statements. Such forward-looking statements are subject to risks and uncertainties that could cause actual results to differ materially from those expressed or implied in the statements relating to our strategy, operations, markets, services, rates, recovery of costs, availability of gas supply and other factors. These risks and uncertainties include the following: state and local regulatory trends and decisions, including the impact of rate proceedings before various state regulatory commissions; increased federal regulatory oversight and potential penalties; possible increased federal, state and local regulation of the safety of our operations; the inherent hazards and risks involved in distributing, transporting and storing natural gas; the capital-intensive nature of our business; our ability to continue to access the credit and capital markets to execute our business strategy; market risks beyond our control affecting our risk management activities, including commodity price volatility, counterparty performance or creditworthiness and interest rate risk; the concentration of our operations in Texas; the impact of adverse economic conditions on our customers; changes in the availability and price of natural gas; the availability and accessibility of contracted gas supplies, interstate pipeline and/or storage services; increased competition from energy suppliers and alternative forms of energy; adverse weather conditions; increased costs of providing health care benefits, along with pension and postretirement health care benefits and increased funding requirements; the inability to continue to hire, train and retain operational, technical and managerial personnel; the impact of climate change or related additional legislation or regulation in the future; the threat of cyber-attacks or acts of cyber-terrorism that could disrupt our business operations and information technology systems or result in the loss or exposure of confidential or sensitive customer, employee or Company information; natural disasters, terrorist activities or other events and other risks and uncertainties discussed herein, all of which are difficult to predict and many of which are beyond our control. Accordingly, while we believe these forward-looking statements to be reasonable, there can be no assurance that they will approximate actual experience or that the expectations derived from them will be realized. Further, we undertake no obligation to update or revise any of our forward-looking statements whether as a result of new information, future events or otherwise.

CRITICAL ACCOUNTING POLICIES

Our consolidated financial statements were prepared in accordance with accounting principles generally accepted in the United States. Preparation of these financial statements requires us to make estimates and judgments that affect the reported amounts of assets, liabilities, revenues and expenses and the related disclosures of contingent assets and liabilities. We base our estimates on historical experience and various other assumptions that we believe to be reasonable under the circumstances. Actual results may differ from estimates.

Our significant accounting policies are discussed in Notes 2 and 15 to our consolidated financial statements. The accounting policies discussed below are both important to the presentation of our financial condition and results of operations and require management to make difficult, subjective or complex accounting estimates. Accordingly, these critical accounting policies are reviewed periodically by the Audit Committee of the Board of Directors.

| Critical Accounting Policy | Summary of Policy | Factors Influencing Application of the Policy |
|-----------------------------------|--|---|
| <i>Regulation</i> | <p>Our distribution and pipeline operations meet the criteria of a cost-based, rate-regulated entity under accounting principles generally accepted in the United States. Accordingly, the financial results for these operations reflect the effects of the ratemaking and accounting practices and policies of the various regulatory commissions to which we are subject.</p> <p>As a result, certain costs that would normally be expensed under accounting principles generally accepted in the United States are permitted to be capitalized or deferred on the balance sheet because it is probable they can be recovered through rates. Further, regulation may impact the period in which revenues or expenses are recognized. The amounts expected to be recovered or recognized are based upon historical experience and our understanding of the regulations.</p> <p>Discontinuing the application of this method of accounting for regulatory assets and liabilities or changes in the accounting for our various regulatory mechanisms could significantly increase our operating expenses as fewer costs would likely be capitalized or deferred on the balance sheet, which could reduce our net income.</p> | <p>Decisions of regulatory authorities</p> <p>Issuance of new regulations or regulatory mechanisms</p> <p>Assessing the probability of the recoverability of deferred costs</p> <p>Continuing to meet the criteria of a cost-based, rate regulated entity for accounting purposes</p> |
| <i>Unbilled Revenue</i> | <p>We follow the revenue accrual method of accounting for distribution segment revenues whereby revenues attributable to gas delivered to customers, but not yet billed under the cycle billing method, are estimated and accrued and the related costs are charged to expense.</p> <p>When permitted, we implement rates that have not been formally approved by our regulatory authorities, subject to refund. We recognize this revenue and establish a reserve for amounts that could be refunded based on our experience for the jurisdiction in which the rates were implemented.</p> | <p>Estimates of delivered sales volumes based on actual tariff information and weather information and estimates of customer consumption and/or behavior</p> <p>Estimates of purchased gas costs related to estimated deliveries</p> <p>Estimates of amounts billed subject to refund</p> |

| Critical Accounting Policy | Summary of Policy | Factors Influencing Application of the Policy |
|--|--|--|
| <i>Pension and other postretirement plans</i> | <p>Pension and other postretirement plan costs and liabilities are determined on an actuarial basis using a September 30 measurement date and are affected by numerous assumptions and estimates including the market value of plan assets, estimates of the expected return on plan assets, assumed discount rates and current demographic and actuarial mortality data. The assumed discount rate and the expected return are the assumptions that generally have the most significant impact on our pension costs and liabilities. The assumed discount rate, the assumed health care cost trend rate and assumed rates of retirement generally have the most significant impact on our postretirement plan costs and liabilities.</p> <p>The discount rate is utilized principally in calculating the actuarial present value of our pension and postretirement obligations and net periodic pension and postretirement benefit plan costs. When establishing our discount rate, we consider high quality corporate bond rates based on bonds available in the marketplace that are suitable for settling the obligations, changes in those rates from the prior year and the implied discount rate that is derived from matching our projected benefit disbursements with currently available high quality corporate bonds.</p> <p>The expected long-term rate of return on assets is utilized in calculating the expected return on plan assets component of our annual pension and postretirement plan costs. We estimate the expected return on plan assets by evaluating expected bond returns, equity risk premiums, asset allocations, the effects of active plan management, the impact of periodic plan asset rebalancing and historical performance. We also consider the guidance from our investment advisors in making a final determination of our expected rate of return on assets. To the extent the actual rate of return on assets realized over the course of a year is greater than or less than the assumed rate, that year's annual pension or postretirement plan costs are not affected. Rather, this gain or loss reduces or increases future pension or postretirement plan costs over a period of approximately ten to twelve years.</p> <p>The market-related value of our plan assets represents the fair market value of the plan assets, adjusted to smooth out short-term market fluctuations over a five-year period. The use of this methodology will delay the impact of current market fluctuations on the pension expense for the period.</p> <p>We estimate the assumed health care cost trend rate used in determining our postretirement net expense based upon our actual health care cost experience, the effects of recently enacted legislation and general economic conditions. Our assumed rate of retirement is estimated based upon our annual review of our participant census information as of the measurement date.</p> | <p>General economic and market conditions</p> <p>Assumed investment returns by asset class</p> <p>Assumed future salary increases</p> <p>Assumed discount rate</p> <p>Projected timing of future cash disbursements</p> <p>Health care cost experience trends</p> <p>Participant demographic information</p> <p>Actuarial mortality assumptions</p> <p>Impact of legislation</p> <p>Impact of regulation</p> |
| <i>Impairment assessments</i> | <p>We review the carrying value of our long-lived assets, including goodwill and identifiable intangibles, whenever events or changes in circumstance indicate that such carrying values may not be recoverable, and at least annually for goodwill, as required by U.S. accounting standards.</p> <p>The evaluation of our goodwill balances and other long-lived assets or identifiable assets for which uncertainty exists regarding the recoverability of the carrying value of such assets involves the assessment of future cash flows and external market conditions and other subjective factors that could impact the estimation of future cash flows including, but not limited to the commodity prices, the amount and timing of future cash flows, future growth rates and the discount rate. Unforeseen events and changes in circumstances or market conditions could adversely affect these estimates, which could result in an impairment charge.</p> | <p>General economic and market conditions</p> <p>Projected timing and amount of future discounted cash flows</p> <p>Judgment in the evaluation of relevant data</p> |

Non-GAAP Financial Measures

Our operations are affected by the cost of natural gas, which is passed through to our customers without markup and includes commodity price, transportation, storage, injection and withdrawal fees and settlements of financial instruments used to mitigate commodity price risk. These costs are reflected in the income statement as purchased gas cost. Therefore, increases in the cost of gas are offset by a corresponding increase in revenues. Accordingly, we believe Contribution Margin, a non-GAAP financial measure, defined as operating revenues less purchased gas cost, is a more useful and relevant measure to analyze our financial performance than operating revenues. As such, the following discussion and analysis of our financial performance will reference Contribution Margin rather than operating revenues and purchased gas cost individually. Further, the term Contribution Margin is not intended to represent operating income, the most comparable GAAP financial measure, as an indicator of operating performance and is not necessarily comparable to similarly titled measures reported by other companies.

As described further in Note 12, the enactment of the Tax Cuts and Jobs Act of 2017 (the "TCJA") required us to remeasure our deferred tax assets and liabilities at our new federal statutory income tax rate as of December 22, 2017. The remeasurement of our net deferred tax liabilities resulted in the recognition of a non-cash income tax benefit of \$158.8 million for the fiscal year ended September 30, 2018. Due to the non-recurring nature of this benefit, we believe that income from continuing operations and diluted earnings per share from continuing operations before the non-cash income tax benefit provide a more relevant measure to analyze our financial performance than income from continuing operations and consolidated diluted earnings per share from continuing operations in order to allow investors to better analyze our core results and allow the information to be presented on a comparative basis to the prior year. Accordingly, the following discussion and analysis of our financial performance will reference adjusted income from continuing operations and diluted earnings per share, which is calculated as follows:

| | For the Fiscal Year Ended September 30 | | |
|---|--|-------------------|------------------|
| | 2018 | 2017 | Change |
| | (In thousands, except per share data) | | |
| Income from continuing operations | \$ 603,064 | \$ 382,711 | \$ 220,353 |
| TCJA non-cash income tax benefit | (158,782) | — | (158,782) |
| Adjusted income from continuing operations | <u>\$ 444,282</u> | <u>\$ 382,711</u> | <u>\$ 61,571</u> |
| Consolidated diluted EPS from continuing operations | \$ 5.43 | \$ 3.60 | \$ 1.83 |
| Diluted EPS from TCJA non-cash income tax benefit | (1.43) | — | (1.43) |
| Adjusted diluted EPS from continuing operations | <u>\$ 4.00</u> | <u>\$ 3.60</u> | <u>\$ 0.40</u> |

RESULTS OF OPERATIONS**Overview**

Atmos Energy strives to operate its businesses safely and reliably while delivering superior shareholder value. Our commitment to modernizing our natural gas distribution and transmission systems requires a significant level of capital spending. We have the ability to begin recovering a significant portion of these investments timely through rate designs and mechanisms that reduce or eliminate regulatory lag and separate the recovery of our approved rate from customer usage patterns. The execution of our capital spending program, the ability to recover these investments timely and our ability to access the capital markets to satisfy our financing needs are the primary drivers that affect our financial performance.

During fiscal 2018, we recorded income from continuing operations of \$603.1 million, or \$5.43 per diluted share, compared to income from continuing operations of \$382.7 million, or \$3.60 per diluted share in the prior year.

After adjusting for the nonrecurring benefit recognized after implementing the TCJA, we recognized adjusted income from continuing operations of \$444.3 million, or \$4.00 per diluted share for the year ended September 30, 2018, compared to adjusted income from continuing operations of \$382.7 million, or \$3.60 per diluted share for the year ended September 30, 2017. The year-over-year increase of \$61.6 million, or 16 percent, largely reflects rate increases driven by safety and reliability spending, weather that was 36 percent colder than the prior year, customer growth in our distribution business and the impact of the TCJA on our effective income tax rate, partially offset by reduced revenues as a result of implementing the TCJA. During the year ended September 30, 2018, we completed 18 regulatory proceedings, resulting in an increase in annual operating income of \$80.1 million and had 11 ratemaking efforts in progress at September 30, 2018, seeking a total increase in annual operating income of \$52.8 million.

Capital expenditures for fiscal 2018 totaled \$1,467.6 million. Over 80 percent was invested to improve the safety and reliability of our distribution and transmission systems, with a significant portion of this investment incurred under regulatory mechanisms that reduce regulatory lag to six months or less. We funded our current-year capital expenditures program primarily through operating cash flows of \$1,124.7 million. Additionally, we issued \$400 million of common stock during the year ended September 30, 2018. The net proceeds from the issuance were primarily used to repay short-term debt under our commercial paper program, to fund capital spending and for general corporate purposes. On October 4, 2018, we completed a public offering of \$600 million 4.30% senior notes due 2048. We received net proceeds from the offering, after underwriting discount and estimated offering expenses of approximately \$591 million, that were used to repay working capital borrowings pursuant to our commercial paper program. The effective interest rate of these notes is 4.37% after giving effect to the offering costs.

As a result of the continued contribution and stability of our earnings, cash flows and capital structure, our Board of Directors increased the quarterly dividend by 8.2% percent for fiscal 2019.

TCJA Impact

The TCJA introduced several significant changes to corporate income tax laws in the United States, which have been reflected in our consolidated financial statements for the year ended September 30, 2018. As a rate regulated entity, the effects of lower tax rates included in our cost of service rates will ultimately flow through to our utility customers in the form of adjusted rates. Therefore, the favorable impact of the reduction in our federal statutory income tax rate on our financial performance will be limited to items that impact our income before income taxes in the current period that have not yet been reflected in our rates (most notably increases to and decreases in commission-approved regulatory assets and liabilities recorded on our consolidated balance sheet) and market-based revenues that are earned from customers who utilize our assets. Note 12 to the consolidated financial statements details the various impacts of the TCJA on our financial position and results from operations. The most significant changes are summarized as follows:

- Because our fiscal year started on October 1, 2017, our federal statutory income tax rate for fiscal 2018 was reduced from 35% to 24.5%. Our effective income tax rate for fiscal 2018 was 27.5%, before the effect of the return of the excess deferred tax liability and the one-time, non-cash income tax benefit. Our federal statutory income tax rate declined to 21% on October 1, 2018.
- As a result of implementing the TCJA, we remeasured our net deferred tax liability using our new federal statutory income tax rate, which reduced our net deferred tax liability by \$905.3 million. Of this amount, \$746.5 million was reclassified to a regulatory liability called excess deferred tax liability. The remaining \$158.8 million was recognized as a one-time, non-cash income tax benefit in our consolidated statement of income for the year ended September 30, 2018.
- Atmos Energy supports our regulators' efforts to ensure our utility customers receive the full benefits of changes in our cost of service rates arising from tax reform. Income taxes, like other costs, are passed through to our customers in our rates; however, changes to customer rates must be approved by our regulators.
 - Beginning in the second quarter of fiscal 2018, we established regulatory liabilities in all our jurisdictions for the difference in taxes included in our cost of service rates that have been calculated based on a 35% statutory income tax rate and a 21% statutory income tax rate, which reduced our revenues. We have received approval from most of our regulators to adjust customer rates for the lower statutory income tax rate.
 - We have also received approval from regulators in several of our states to return amounts to customers related to the regulatory liability recorded for differences in our cost of service rates due to the change in the statutory income tax rate within one year.
 - We have received approval from regulators in several of our states to begin returning the Excess Deferred Tax Liability created upon implementation of the TCJA, as discussed above, over a period ranging from 18 to 40 years. For the year ended September 30, 2018, we amortized \$1.6 million of this regulatory liability.
- The enactment of the TCJA is expected to reduce our future cash flows from operations primarily due to 1) the collection of taxes at a lower rate and 2) the return of regulatory liabilities established in response to the enactment of the TCJA and regulatory activities to our utility customers. We intend to externally finance this reduction in operating cash flow in a balanced fashion in order to maintain an equity-to-total-capitalization ratio ranging from 50% to 60% to maintain our current credit ratings.

Consolidated Results

The following table presents our consolidated financial highlights for the fiscal years ended September 30, 2018, 2017 and 2016.

| | For the Fiscal Year Ended September 30 | | |
|---|--|--------------|--------------|
| | 2018 | 2017 | 2016 |
| | (In thousands, except per share data) | | |
| Operating revenues | \$ 3,115,546 | \$ 2,759,735 | \$ 2,454,648 |
| Purchased gas cost | 1,167,848 | 925,536 | 746,192 |
| Operating expenses | 1,224,564 | 1,106,653 | 1,051,226 |
| Operating income | 723,134 | 727,546 | 657,230 |
| Interest charges | 106,646 | 120,182 | 114,812 |
| Income from continuing operations before income taxes | 611,144 | 604,094 | 542,184 |
| Income tax expense | 166,862 | 221,383 | 196,642 |
| One-time, non-cash income tax benefit | (158,782) | — | — |
| Net income from continuing operations | 603,064 | 382,711 | 345,542 |
| Net income from discontinued operations | — | 13,710 | 4,562 |
| Net income | \$ 603,064 | \$ 396,421 | \$ 350,104 |
| Diluted net income from continuing operations per share | \$ 5.43 | \$ 3.60 | \$ 3.33 |
| Diluted net income from discontinued operations per share | — | 0.13 | 0.05 |
| Diluted net income per share | \$ 5.43 | \$ 3.73 | \$ 3.38 |

Our consolidated net income during the last three fiscal years was earned across our business segments as follows:

| | For the Fiscal Year Ended September 30 | | |
|---|--|------------|------------|
| | 2018 | 2017 | 2016 |
| | (In thousands) | | |
| Distribution segment | \$ 442,966 | \$ 268,369 | \$ 233,830 |
| Pipeline and storage segment | 160,098 | 114,342 | 111,712 |
| Net income from continuing operations | 603,064 | 382,711 | 345,542 |
| Net income from discontinued natural gas marketing operations | — | 13,710 | 4,562 |
| Net income | \$ 603,064 | \$ 396,421 | \$ 350,104 |

See the following discussion regarding the results of operations for each of our business operating segments.

Distribution Segment

The distribution segment is primarily comprised of our regulated natural gas distribution and related sales operations in eight states. The primary factors that impact the results of our distribution operations are our ability to earn our authorized rates of return, competitive factors in the energy industry and economic conditions in our service areas.

Our ability to earn our authorized rates is based primarily on our ability to improve the rate design in our various ratemaking jurisdictions to minimize regulatory lag and, ultimately, separate the recovery of our approved rates from customer usage patterns. Improving rate design is a long-term process and is further complicated by the fact that we operate in multiple rate jurisdictions. The “*Ratemaking Activity*” section of this Form 10-K describes our current rate strategy, progress towards implementing that strategy and recent ratemaking initiatives in more detail.

We are generally able to pass the cost of gas through to our customers without markup under purchased gas cost adjustment mechanisms; therefore, increases in the cost of gas are offset by a corresponding increase in revenues. Contribution margin in our Texas and Mississippi service areas include franchise fees and gross receipt taxes, which are calculated as a percentage of revenue (inclusive of gas costs). Therefore, the amount of these taxes included in revenue is influenced by the cost of gas and the level of gas sales volumes. We record the associated tax expense as a component of taxes, other than

income. Although changes in revenue related taxes arising from changes in gas costs affect Contribution Margin, over time the impact is offset within operating income.

Although the cost of gas typically does not have a direct impact on our Contribution Margin, higher gas costs may adversely impact our accounts receivable collections, resulting in higher bad debt expense, and may require us to increase borrowings under our credit facilities resulting in higher interest expense. In addition, higher gas costs, as well as competitive factors in the industry and general economic conditions may cause customers to conserve or, in the case of industrial consumers, to use alternative energy sources. Currently, gas cost risk has been mitigated by rate design that allows us to collect from our customers the gas cost portion of our bad debt expense on approximately 76 percent of our residential and commercial margins.

During fiscal 2018, we completed 16 regulatory proceedings in our distribution segment, resulting in an \$8.9 million increase in annual operating income.

Review of Financial and Operating Results

Financial and operational highlights for our distribution segment for the fiscal years ended September 30, 2018, 2017 and 2016 are presented below.

| | For the Fiscal Year Ended September 30 | | | | |
|--|--|-------------------|-------------------|-------------------|------------------|
| | 2018 | 2017 | 2016 | 2018 vs. 2017 | 2017 vs. 2016 |
| | (In thousands, unless otherwise noted) | | | | |
| Operating revenues | \$ 3,003,047 | \$ 2,649,175 | \$ 2,339,778 | \$ 353,872 | \$ 309,397 |
| Purchased gas cost | 1,559,836 | 1,269,456 | 1,058,576 | 290,380 | 210,880 |
| Contribution Margin | 1,443,211 | 1,379,719 | 1,281,202 | 63,492 | 98,517 |
| Operating expenses | 962,344 | 874,077 | 839,318 | 88,267 | 34,759 |
| Operating income | 480,867 | 505,642 | 441,884 | (24,775) | 63,758 |
| Miscellaneous income (expense) | (1,849) | (1,695) | 1,171 | (154) | (2,866) |
| Interest charges | 65,850 | 79,789 | 78,238 | (13,939) | 1,551 |
| Income before income taxes | 413,168 | 424,158 | 364,817 | (10,990) | 59,341 |
| Income tax expense | 107,880 | 155,789 | 130,987 | (47,909) | 24,802 |
| One-time, non-cash income tax benefit | (137,678) | — | — | (137,678) | — |
| Net income | \$ 442,966 | \$ 268,369 | \$ 233,830 | \$ 174,597 | \$ 34,539 |
| Consolidated distribution sales volumes — MMcf | 300,817 | 246,825 | 258,650 | 53,992 | (11,825) |
| Consolidated distribution transportation volumes — MMcf | 150,566 | 141,540 | 133,378 | 9,026 | 8,162 |
| Total consolidated distribution throughput — MMcf | 451,383 | 388,365 | 392,028 | 63,018 | (3,663) |
| Consolidated distribution average cost of gas per Mcf sold | \$ 5.19 | \$ 5.14 | \$ 4.09 | \$ 0.05 | \$ 1.05 |

Fiscal year ended September 30, 2018 compared with fiscal year ended September 30, 2017

Income before income taxes for our distribution segment decreased three percent, primarily due to an \$88.3 million increase in operating expenses, partially offset by a \$63.5 million increase in Contribution Margin. The year-to-date increase in Contribution Margin primarily reflects:

- a \$70.7 million net increase in rate adjustments, excluding rate adjustments resulting from the TCJA, primarily in our Mid-Tex, Kentucky/Mid-States, Mississippi and West Texas Divisions. These rate adjustments were driven primarily by increased safety and reliability spending.
- a \$12.2 million increase in net consumption, primarily in our Mid-Tex, Mississippi, Kentucky/Mid-States and Louisiana Divisions.
- a \$14.8 million increase in revenue-related taxes primarily in our Mid-Tex Division, offset by a corresponding \$15.5 million increase in the related tax expense.
- an \$8.9 million increase in transportation margin primarily in our Kentucky/Mid-States Division.
- an \$8.4 million increase from customer growth, primarily in our Mid-Tex Division.

- a \$51.3 million decrease in Contribution Margin due to the inclusion of the lower statutory federal income tax rate in our revenues due to implementation of the TCJA. Of this amount, \$30.0 million has been reflected in customer bills. The remaining \$21.3 million relates to the establishment of regulatory liabilities for the difference between the former 35% federal statutory income tax rate and the current 21% rate.

The increase in operating expenses, which include operation and maintenance expense, bad debt expense, depreciation and amortization expense and taxes, other than income, largely reflects expenses incurred after we decided to undertake a planned outage of our natural gas distribution system in Northwest Dallas that affected approximately 2,400 homes. While the system was replaced, we provided financial assistance to the affected residents and incurred other related costs of approximately \$24 million.

The remaining increase in operating expenses is primarily attributable to an increase in employee-related costs and incremental system integrity activities of \$19.3 million, increased revenue-related taxes, as discussed above, and increased depreciation and property taxes of \$22.5 million associated with increased capital investments.

Interest charges decreased \$13.9 million, primarily from interest deferrals associated with our infrastructure spending activities in Texas and Louisiana.

The decrease in income tax expense primarily reflects a reduction in our effective tax rate from 36.7% to 26.1%, as a result of the TCJA. During fiscal 2018, in certain jurisdictions, we began amortizing the excess deferred income taxes in the amount of \$1.6 million.

Fiscal year ended September 30, 2017 compared with fiscal year ended September 30, 2016

Income before income taxes for our distribution segment increased 16 percent, primarily due to a \$98.5 million increase in Contribution Margin, partially offset by a \$34.8 million increase in operating expenses. The year-over-year increase in Contribution Margin primarily reflects:

- a \$72.4 million net increase in rate adjustments, primarily in our Mid-Tex, Louisiana, Mississippi and West Texas Divisions. These rate adjustments were driven primarily by increased safety and reliability spending.
- Customer growth, primarily in our Mid-Tex and Kentucky/Mid-States Divisions, which contributed an incremental \$5.8 million.
- a \$5.8 million increase in transportation margin, primarily in the Kentucky/Mid-States and Mid-Tex Divisions.
- a \$5.2 million increase in revenue-related taxes primarily in our Mid-Tex and West Texas Divisions, offset by a corresponding \$5.1 million increase in the related tax expense.
- a \$2.9 million increase in net consumption, despite weather that was 12 percent warmer than the prior year.

The increase in operating expenses was primarily due to increased depreciation expense and property taxes associated with increased capital investments, higher employee-related costs, increased revenue-related taxes, as discussed above, and higher pipeline maintenance and related activities, partially offset by lower legal costs.

The following table shows our operating income by distribution division, in order of total rate base, for the fiscal years ended September 30, 2018, 2017 and 2016. The presentation of our distribution operating income is included for financial reporting purposes and may not be appropriate for ratemaking purposes.

| | For the Fiscal Year Ended September 30 | | | | |
|---------------------|--|------------|------------|---------------|---------------|
| | 2018 | 2017 | 2016 | 2018 vs. 2017 | 2017 vs. 2016 |
| | (In thousands) | | | | |
| Mid-Tex | \$ 202,444 | \$ 233,158 | \$ 210,608 | \$ (30,714) | \$ 22,550 |
| Kentucky/Mid-States | 81,105 | 75,214 | 63,730 | 5,891 | 11,484 |
| Louisiana | 70,609 | 69,300 | 55,857 | 1,309 | 13,443 |
| West Texas | 45,494 | 46,859 | 41,131 | (1,365) | 5,728 |
| Mississippi | 47,237 | 38,505 | 37,398 | 8,732 | 1,107 |
| Colorado-Kansas | 32,333 | 34,658 | 31,840 | (2,325) | 2,818 |
| Other | 1,645 | 7,948 | 1,320 | (6,303) | 6,628 |
| Total | \$ 480,867 | \$ 505,642 | \$ 441,884 | \$ (24,775) | \$ 63,758 |

Pipeline and Storage Segment

Our pipeline and storage segment consists of the pipeline and storage operations of Atmos Pipeline-Texas Division (APT) and our natural gas transmission operations in Louisiana. APT is one of the largest intrastate pipeline operations in Texas with a heavy concentration in the established natural gas producing areas of central, northern and eastern Texas, extending into or near the major producing areas of the Barnett Shale, the Texas Gulf Coast and the Delaware and Midland Basins of West Texas. APT provides transportation and storage services to our Mid-Tex Division, other third party local distribution companies, industrial and electric generation customers, as well as marketers and producers. As part of its pipeline operations, APT owns and operates five underground storage facilities in Texas.

Our natural gas transmission operations in Louisiana are comprised of a proprietary 21-mile pipeline located in the New Orleans, Louisiana area that is primarily used to aggregate gas supply for our distribution division in Louisiana under a long-term contract and, on a more limited basis, to third parties. The demand fee charged to our Louisiana distribution division for these services is subject to regulatory approval by the Louisiana Public Service Commission. We also manage two asset management plans, which have been approved by applicable state regulatory commissions. Generally, these asset management plans require us to share with our distribution customers a significant portion of the cost savings earned from these arrangements.

Our pipeline and storage segment is impacted by seasonal weather patterns, competitive factors in the energy industry and economic conditions in our Texas and Louisiana service areas. Natural gas prices do not directly impact the results of this segment as revenues are derived from the transportation and storage of natural gas. However, natural gas prices and demand for natural gas could influence the level of drilling activity in the supply areas that we serve, which may influence the level of throughput we may be able to transport on our pipelines. Further, natural gas price differences between the various hubs that we serve in Texas could influence the volumes of gas transported for shippers through Texas pipeline systems and rates for such transportation.

The results of APT are also significantly impacted by the natural gas requirements of its local distribution company customers. Additionally, its operations may be impacted by the timing of when costs and expenses are incurred and when these costs and expenses are recovered through its tariffs.

APT annually uses the Gas Reliability Infrastructure Program (GRIP) to recover capital costs incurred in the prior calendar year. Following the conclusion of its rate case in August 2017, APT made a GRIP filing that covered changes in net investment from October 1, 2016 through December 31, 2016 with a requested increase in operating income of \$29.0 million. On December 5, 2017, the filing was approved. On February 15, 2018, APT made a GRIP filing that covered changes in net investment from January 1, 2017 through December 31, 2017 with a requested increase in operating income of \$42.2 million. On May 22, 2018, the filing was approved.

On December 21, 2016, the Louisiana Public Service Commission approved an annual increase of five percent to the demand fee charged by our natural gas transmission pipeline for each of the next 10 years, effective October 1, 2017.

Review of Financial and Operating Results

Financial and operational highlights for our pipeline and storage segment for the fiscal years ended September 30, 2018, 2017 and 2016 are presented below.

| | For the Fiscal Year Ended September 30 | | | | |
|---|--|-------------------|-------------------|------------------|-----------------|
| | 2018 | 2017 | 2016 | 2018 vs. 2017 | 2017 vs. 2016 |
| | (In thousands, unless otherwise noted) | | | | |
| Mid-Tex / Affiliate transportation revenue | \$ 354,885 | \$ 338,850 | \$ 315,726 | \$ 16,035 | \$ 23,124 |
| Third-party transportation revenue | 140,231 | 100,100 | 89,498 | 40,131 | 10,602 |
| Other revenue | 12,597 | 18,080 | 21,972 | (5,483) | (3,892) |
| Total operating revenues | 507,713 | 457,030 | 427,196 | 50,683 | 29,834 |
| Total purchased gas cost | 1,978 | 2,506 | (58) | (528) | 2,564 |
| Contribution Margin | 505,735 | 454,524 | 427,254 | 51,211 | 27,270 |
| Operating expenses | 263,468 | 232,620 | 211,908 | 30,848 | 20,712 |
| Operating income | 242,267 | 221,904 | 215,346 | 20,363 | 6,558 |
| Miscellaneous expense | (3,495) | (1,575) | (1,405) | (1,920) | (170) |
| Interest charges | 40,796 | 40,393 | 36,574 | 403 | 3,819 |
| Income before income taxes | 197,976 | 179,936 | 177,367 | 18,040 | 2,569 |
| Income tax expense | 58,982 | 65,594 | 65,655 | (6,612) | (61) |
| One-time, non-cash income tax benefit | (21,104) | — | — | (21,104) | — |
| Net income | \$ 160,098 | \$ 114,342 | \$ 111,712 | \$ 45,756 | \$ 2,630 |
| Gross pipeline transportation volumes — MMcf | 871,904 | 770,348 | 686,042 | 101,556 | 84,306 |
| Consolidated pipeline transportation volumes — MMcf | 663,900 | 596,179 | 505,303 | 67,721 | 90,876 |

Fiscal year ended September 30, 2018 compared with fiscal year ended September 30, 2017

Income before income taxes for our pipeline and storage segment increased ten percent, primarily due to a \$51.2 million increase in Contribution Margin, partially offset by a \$30.8 million increase in operating expenses. The increase in Contribution Margin primarily reflects:

- a \$74.3 million increase in rates from the approved APT rate case and the GRIP filings approved in December 2017 and May 2018. The increase in rates was driven primarily by increased safety and reliability spending.
- a net increase of \$1.3 million due to wider spreads and positive supply and demand dynamics affecting the Permian Basin.
- a \$24.1 million decrease in Contribution Margin due to the inclusion of the lower statutory federal income tax rate in our revenues due to implementation of the TCJA. Of this amount, \$11.4 million has been reflected in customer bills. The remaining \$12.7 million relates to the establishment of regulatory liabilities, as discussed above.

The increase in operating expenses is primarily due to higher depreciation expense of \$25.8 million associated with increased capital investments and an increase in employee-related costs.

The decrease in income tax expense primarily reflects a reduction in our effective tax rate from 36.5% to 29.8%, as a result of the TCJA.

Fiscal year ended September 30, 2017 compared with fiscal year ended September 30, 2016

Income before income taxes for our pipeline and storage segment increased slightly, primarily due to a \$27.3 million increase in Contribution Margin, partially offset by a \$20.7 million increase in operating expenses. The increase in Contribution Margin primarily reflects a \$24.6 million increase in rates from the approved 2016 GRIP filing and the rate case finalized in August 2017 and higher through system revenue of \$8.3 million, largely related to higher basis spreads due to increased production in the Permian Basin and incremental throughput on a pipeline acquired in the first quarter of fiscal 2017. Partially offsetting these increases was a decrease in Contribution Margin of \$2.3 million due to lower excess retention gas sales in the current year. As noted above, as a result of the annual rate case, we did not file our annual GRIP filing during the second quarter of fiscal 2017, which influenced this segment's performance year-over-year.

Operating expenses increased \$20.7 million, primarily due to increased depreciation expense and property taxes associated with increased capital investments.

Natural Gas Marketing Segment

Through December 31, 2016, we were engaged in an unregulated natural gas marketing business, which was conducted by Atmos Energy Marketing (AEM). AEM's primary business was to aggregate and purchase gas supply, arrange transportation and storage logistics and ultimately deliver gas to customers at competitive prices.

As more fully described in Note 15, effective January 1, 2017, we sold all of the equity interests of AEM to CenterPoint Energy Services, Inc. (CES), a subsidiary of CenterPoint Energy Inc. As a result of the sale, Atmos Energy has fully exited the nonregulated natural gas marketing business. Accordingly, a gain on sale from discontinued operations for \$2.7 million was recorded and net income of \$11.0 million for AEM is reported as discontinued operations for the year ended September 30, 2017, compared to net income of \$4.6 million for AEM reported for discontinued operations for the year ended September 30, 2016.

Review of Financial and Operating Results

Financial and operational highlights for our natural gas marketing segment for the fiscal years ended September 30, 2017 and 2016 are presented below.

| | For the Fiscal Year Ended September 30 | | |
|---|--|--------------|---------------|
| | 2017 | 2016 | 2017 vs. 2016 |
| | (In thousands, unless otherwise noted) | | |
| Operating revenues | \$ 303,474 | \$ 1,005,090 | \$ (701,616) |
| Purchased gas cost | 277,554 | 968,118 | (690,564) |
| Contribution Margin | 25,920 | 36,972 | (11,052) |
| Operating expenses | 7,874 | 26,184 | (18,310) |
| Operating income | 18,046 | 10,788 | 7,258 |
| Miscellaneous income | 30 | 109 | (79) |
| Interest charges | 241 | 2,604 | (2,363) |
| Income before income taxes | 17,835 | 8,293 | 9,542 |
| Income tax expense | 6,841 | 3,731 | 3,110 |
| Income from discontinued operations | 10,994 | 4,562 | 6,432 |
| Gain on sale of discontinued operations, net of tax | 2,716 | — | 2,716 |
| Net income from discontinued operations | \$ 13,710 | \$ 4,562 | \$ 9,148 |
| Gross natural gas marketing delivered gas sales volumes — MMcf | 90,223 | 371,319 | (281,096) |
| Consolidated natural gas marketing delivered gas sales volumes — MMcf | 78,646 | 325,537 | (246,891) |
| Net physical position (Bcf) | — | 18.1 | (18.1) |

Fiscal year ended September 30, 2017 compared with fiscal year ended September 30, 2016

The \$9.1 million year-over-year increase in net income from discontinued operations primarily reflects the recognition of a net \$6.6 million noncash gain from unwinding hedge accounting for certain of the natural gas marketing business's financial positions in connection with the sale of AEM. Additionally we recognized a \$2.7 million net gain on sale upon completion of the sale of AEM to CES in January 2017.

LIQUIDITY AND CAPITAL RESOURCES

The liquidity required to fund our working capital, capital expenditures and other cash needs is provided from a combination of internally generated cash flows and external debt and equity financing. External debt financing is provided primarily through the issuance of long-term debt, a \$1.5 billion commercial paper program and three committed revolving credit facilities with a total availability from third-party lenders of approximately \$1.5 billion. The commercial paper program and credit facilities provide cost-effective, short-term financing until it can be replaced with a balance of long-term debt and equity financing that achieves the Company's desired capital structure with an equity-to-total-capitalization ratio between 50% and 60%, inclusive of long-term and short-term debt. Additionally, we have various uncommitted trade credit lines with our gas suppliers that we utilize to purchase natural gas on a monthly basis. The liquidity provided by these sources is expected to be sufficient to fund the Company's working capital needs and capital expenditures program for fiscal year 2019 and beyond. Please refer to the *TCJA Impact* section above regarding anticipated impacts on our liquidity, capital resources and cash flows.

To support our capital market activities, we have a registration statement on file with the SEC that permits us to issue a total of \$2.5 billion in common stock and/or debt securities. The shelf registration statement expires on March 26, 2019. Under

the shelf registration statement, in November 2017, we filed a prospectus supplement for an at-the-market (ATM) equity distribution program under which we may issue and sell shares of our common stock up to an aggregate offering price of \$500 million.

At September 30, 2018, approximately \$650.0 million of securities remained available for issuance under the shelf registration statement. On October 4, 2018, we completed a public offering of \$600 million of 4.30% senior notes due 2048. The effective rate of this note is 4.37% after giving effect to the offering costs. We received net proceeds from the offering, after underwriting discount and estimated offering expenses of approximately \$591 million, that were used to repay working capital borrowings pursuant to our commercial paper program. The issuance of these notes effectively exhausted our existing shelf registration statement.

During the first quarter of fiscal 2019, we intend to file a new registration statement for the issuance, from time to time, of up to \$3.0 billion in common stock and/or debt securities. In addition, during the first quarter of fiscal 2019, we plan to enter into a new ATM equity distribution agreement under which we may issue and sell shares of our common stock, up to an aggregate offering price of \$500 million, under the new shelf registration statement.

The following table presents our capitalization as of September 30, 2018 and 2017:

| | September 30 | | | |
|---|------------------------------------|--------|--------------|--------|
| | 2018 | | 2017 | |
| | (In thousands, except percentages) | | | |
| Short-term debt | \$ 575,780 | 6.8% | \$ 447,745 | 6.0% |
| Long-term debt | 3,068,665 | 36.5% | 3,067,045 | 41.4% |
| Shareholders' equity | 4,769,951 | 56.7% | 3,898,666 | 52.6% |
| Total capitalization, including short-term debt | \$ 8,414,396 | 100.0% | \$ 7,413,456 | 100.0% |

Cash Flows

Our internally generated funds may change in the future due to a number of factors, some of which we cannot control. These factors include regulatory changes, the price for our services, the demand for such products and services, margin requirements resulting from significant changes in commodity prices, operational risks and other factors.

Cash flows from operating, investing and financing activities for the years ended September 30, 2018, 2017 and 2016 are presented below.

| | For the Fiscal Year Ended September 30 | | | | |
|--|--|-------------|-------------|---------------|---------------|
| | 2018 | 2017 | 2016 | 2018 vs. 2017 | 2017 vs. 2016 |
| | (In thousands) | | | | |
| Total cash provided by (used in) | | | | | |
| Operating activities | \$ 1,124,662 | \$ 867,090 | \$ 794,990 | \$ 257,572 | \$ 72,100 |
| Investing activities | (1,463,566) | (1,056,306) | (1,079,732) | (407,260) | 23,426 |
| Financing activities | 326,266 | 168,091 | 303,623 | 158,175 | (135,532) |
| Change in cash and cash equivalents | (12,638) | (21,125) | 18,881 | 8,487 | (40,006) |
| Cash and cash equivalents at beginning of period | 26,409 | 47,534 | 28,653 | (21,125) | 18,881 |
| Cash and cash equivalents at end of period | \$ 13,771 | \$ 26,409 | \$ 47,534 | \$ (12,638) | \$ (21,125) |

Cash flows from operating activities

Year-over-year changes in our operating cash flows primarily are attributable to changes in net income and working capital changes, particularly within our distribution segment resulting from changes in the price of natural gas and the timing of customer collections, payments for natural gas purchases and deferred gas cost recoveries.

Fiscal Year ended September 30, 2018 compared with fiscal year ended September 30, 2017

For the fiscal year ended September 30, 2018, we generated operating cash flows of \$1,124.7 million compared with \$867.1 million in the prior year. The year-over-year increase primarily reflects the positive cash effects of successful rate case outcomes achieved in fiscal 2017 driven primarily by increased safety and reliability spending and changes in working capital, primarily as a result of the timing of gas cost recoveries under our purchase gas cost mechanisms as a result of a year-over-year increase in sale volumes. This increase in sales volumes also contributed to the year-over-year increase in operating cash flow.

Fiscal Year ended September 30, 2017 compared with fiscal year ended September 30, 2016

For the fiscal year ended September 30, 2017, we generated operating cash flows of \$867.1 million compared with \$795.0 million in fiscal 2016. The year-over-year increase primarily reflects the positive cash effect of successful rate case outcomes achieved in fiscal 2016.

Cash flows from investing activities

In recent years, we have used substantial amounts of cash to fund our ongoing construction program, which enables us to improve safety and reliability by modernizing our distribution and transmission system, used to provide distribution services to our existing customer base, expand our natural gas distribution services into new markets, enhance the integrity of our pipelines and, more recently, expand our intrastate pipeline network. Over the last three fiscal years, approximately 82 percent of our capital spending has been committed to improving the safety and reliability of our system.

In executing our regulatory strategy, we target our capital spending on regulatory mechanisms that permit us to earn an adequate return timely on our investment without compromising the safety or reliability of our system. Substantially all of our regulated jurisdictions have rate tariffs that provide the opportunity to include in their rate base approved capital costs on a periodic basis without being required to file a rate case.

For the fiscal year ended September 30, 2018, we had \$1,467.6 million in capital expenditures compared with \$1,137.1 million for the fiscal year ended September 30, 2017 and \$1,087.0 million for the fiscal year ended September 30, 2016.

Fiscal Year ended September 30, 2018 compared with fiscal year ended September 30, 2017

The \$330.5 million increase in capital expenditures in fiscal 2018 compared to fiscal 2017 primarily reflects planned increases to modernize our distribution and transmission system, and increases in spending in our pipeline and storage segment to improve the reliability of gas service to our local distribution company customers. The year-over-year increase also reflects the absence in the current year period of \$140.3 million in net proceeds received from the sale of AEM, \$29.8 million in proceeds received from the completion of a State of Texas use tax audit and the \$86.1 million used to acquire a pipeline in December 2016.

Fiscal Year ended September 30, 2017 compared with fiscal year ended September 30, 2016

The \$50.1 million increase in capital expenditures in fiscal 2017 compared to fiscal 2016 primarily reflects a:

- \$109.7 million increase due to planned increases in our distribution segment to replace vintage pipe.
- \$59.2 million decrease in spending in our pipeline and storage segment as a result of the substantial completion of an APT project to improve the reliability of gas service to its local distribution company customers.

Cash flows from investing activities for the year ended September 30, 2017 also include proceeds of \$140.3 million received from the sale of AEM, proceeds received from the completion of a State of Texas use tax audit and \$86.1 million used to purchase a pipeline in the first fiscal quarter of 2017.

Cash flows from financing activities

We generated a net amount of \$326.3 million, \$168.1 million and \$303.6 million in cash from financing activities for fiscal years 2018, 2017 and 2016. Our significant financing activities for the fiscal years ended September 30, 2018, 2017 and 2016 are summarized as follows:

2018

During the fiscal year ended September 30, 2018, our financing activities generated \$326.3 million of cash compared with \$168.1 million of cash generated in the prior year. The \$158.2 million increase in cash provided by financing activities reflects higher net short-term borrowings due to increased capital expenditures and period-over-period changes in working capital funding needs compared to the prior year, as well as net proceeds received of \$395.1 million from equity financing. Cash dividends increased due to a 7.8% increase in our dividend rate and an increase in shares outstanding.

2017

During the fiscal year ended September 30, 2017, our financing activities generated \$168.1 million of cash compared with \$303.6 million of cash generated in the prior year. The \$135.5 million decrease in cash provided by financing activities is primarily due to the reduction in our short-term debt, partially offset by an increase in our long-term debt.

During fiscal 2017, we completed approximately \$975 million of debt and equity financing. On June 8, 2017, we completed a public offering of \$500 million of 3.00% senior unsecured notes due 2027 and \$250 million of 4.125% senior unsecured notes due 2044. The net proceeds of approximately \$753 million were used to repay our \$250 million 6.35% senior unsecured notes at maturity on June 15, 2017 and for general corporate purposes, including the repayment of working capital

borrowings pursuant to our commercial paper program. In October 2016, we issued \$125 million of long-term debt under our three year, \$200 million multi-draw term loan agreement.

Additionally, during fiscal 2017 we issued 1.3 million shares under our ATM program and received net proceeds of \$98.8 million. As of September 30, 2017, substantially all of shares under this program had been issued.

2016

During the fiscal year ended September 30, 2016, our financing activities generated \$303.6 million of cash compared with \$131.1 million of cash generated in fiscal 2015. The increase is primarily due to higher net short-term borrowings due to increased capital expenditures and period-over-period changes in working capital funding needs compared to the prior year, as well as proceeds received from the issuance of common stock under our ATM program in the third fiscal quarter of 2016.

The following table shows the number of shares issued for the fiscal years ended September 30, 2018, 2017 and 2016:

| | For the Fiscal Year Ended September 30 | | |
|--|--|-----------|-----------|
| | 2018 | 2017 | 2016 |
| Shares issued: | | | |
| Direct Stock Purchase Plan | 131,213 | 112,592 | 133,133 |
| Retirement Savings Plan | 94,081 | 228,326 | 359,414 |
| 1998 Long-Term Incentive Plan (LTIP) | 385,351 | 529,662 | 598,439 |
| November 2017 Offering | 4,558,404 | — | — |
| At-the-Market (ATM) Equity Sales Program | — | 1,303,494 | 1,360,756 |
| Total shares issued | 5,169,049 | 2,174,074 | 2,451,742 |

Credit Ratings

Our credit ratings directly affect our ability to obtain short-term and long-term financing, in addition to the cost of such financing. In determining our credit ratings, the rating agencies consider a number of quantitative factors, including debt to total capitalization, operating cash flow relative to outstanding debt, operating cash flow coverage of interest and pension liabilities and funding status. In addition, the rating agencies consider qualitative factors such as consistency of our earnings over time, the quality of our management and business strategy and the regulatory environment in the states where we operate.

Our debt is rated by two rating agencies: Standard & Poor's Corporation (S&P) and Moody's Investors Service (Moody's). As of September 30, 2018, both rating agencies maintained a stable outlook.

Our current debt ratings are all considered investment grade and are as follows:

| | S&P | Moody's |
|---------------------------------|-----|---------|
| Senior unsecured long-term debt | A | A2 |
| Short-term debt | A-1 | P-1 |

A significant degradation in our operating performance or a significant reduction in our liquidity caused by more limited access to the private and public credit markets as a result of deteriorating global or national financial and credit conditions could trigger a negative change in our ratings outlook or even a reduction in our credit ratings by the two credit rating agencies. This would mean more limited access to the private and public credit markets and an increase in the costs of such borrowings.

A credit rating is not a recommendation to buy, sell or hold securities. The highest investment grade credit rating is AAA for S&P and Aaa for Moody's. The lowest investment grade credit rating is BBB- for S&P and Baa3 for Moody's. Our credit ratings may be revised or withdrawn at any time by the rating agencies, and each rating should be evaluated independently of any other rating. There can be no assurance that a rating will remain in effect for any given period of time or that a rating will not be lowered, or withdrawn entirely, by a rating agency if, in its judgment, circumstances so warrant.

Debt Covenants

We were in compliance with all of our debt covenants as of September 30, 2018. Our debt covenants are described in Note 5 to the consolidated financial statements.

Contractual Obligations and Commercial Commitments

The following table provides information about contractual obligations and commercial commitments at September 30, 2018.

| | Payments Due by Period | | | | |
|--|------------------------|---------------------|-------------------|-------------------|----------------------|
| | Total | Less than 1 year | 1-3 years | 3-5 years | More than 5 years |
| (In thousands) | | | | | |
| Contractual Obligations | | | | | |
| Long-term debt ⁽¹⁾ | \$ 3,085,000 | \$ 575,000 | \$ — | \$ — | \$ 2,510,000 |
| Short-term debt ⁽¹⁾ | 575,780 | 575,780 | — | — | — |
| Interest charges ⁽²⁾ | 2,257,307 | 134,227 | 222,759 | 222,759 | 1,677,562 |
| Operating leases ⁽³⁾ | 104,191 | 17,655 | 32,685 | 31,625 | 22,226 |
| Financial instrument obligations ⁽⁴⁾ | 56,837 | 56,734 | 103 | — | — |
| Pension and postretirement benefit plan contributions ⁽⁵⁾ | 275,907 | 24,882 | 56,310 | 63,525 | 131,190 |
| Uncertain tax positions ⁽⁶⁾ | 26,203 | — | 26,203 | — | — |
| Total contractual obligations | \$ 6,381,225 | \$ 1,384,278 | \$ 338,060 | \$ 317,909 | \$ 4,340,978 |

(1) See Note 5 to the consolidated financial statements.

(2) Interest charges were calculated using the effective rate for each debt issuance.

(3) See Note 10 to the consolidated financial statements.

(4) Represents liabilities for natural gas commodity and interest rate financial instruments that were valued as of September 30, 2018. The ultimate settlement amounts of these remaining liabilities are unknown because they are subject to continuing market risk until the financial instruments are settled.

(5) Represents expected contributions to our pension and postretirement benefit plans, which are discussed in Note 7 to the consolidated financial statements.

(6) Represents liabilities associated with uncertain tax positions claimed or expected to be claimed on tax returns. The amount does not include interest and penalties that may be applied to these positions.

We maintain supply contracts with several vendors that generally cover a period of up to one year. Commitments for estimated base gas volumes are established under these contracts on a monthly basis at contractually negotiated prices. Commitments for incremental daily purchases are made as necessary during the month in accordance with the terms of individual contracts. Our Mid-Tex Division also maintains a limited number of long-term supply contracts to ensure a reliable source of gas for our customers in its service area which obligate it to purchase specified volumes at market and fixed prices. At September 30, 2018, we were committed to purchase 54.1 Bcf within one year and 37.2 Bcf within two to three years under indexed contracts.

The passage of the TCJA resulted in the remeasurement of our net deferred tax liability. At September 30, 2018, we recorded \$744.9 million, which relates to our regulated operations and has been recorded as a regulatory liability. The period and timing of the return of the excess deferred taxes is being determined by regulators in each of our jurisdictions. See Note 12 for further information.

Risk Management Activities

We use financial instruments to mitigate commodity price risk and, periodically, to manage interest rate risk. In our distribution and pipeline and storage segments, we use a combination of physical storage, fixed physical contracts and fixed financial contracts to reduce our exposure to unusually large winter-period gas price increases. Additionally, we manage interest rate risk by entering into financial instruments to effectively fix the Treasury yield component of the interest cost associated with anticipated financings.

We record our financial instruments as a component of risk management assets and liabilities, which are classified as current or noncurrent based upon the anticipated settlement date of the underlying financial instrument. Substantially all of our financial instruments are valued using external market quotes and indices.

The following table shows the components of the change in fair value of our financial instruments for the fiscal year ended September 30, 2018 (in thousands):

| | |
|---|--------------|
| Fair value of contracts at September 30, 2017 | \$ (109,159) |
| Contracts realized/settled | (1,254) |
| Fair value of new contracts | 241 |
| Other changes in value | 54,954 |
| Fair value of contracts at September 30, 2018 | (55,218) |
| Netting of cash collateral | — |
| Cash collateral and fair value of contracts at September 30, 2018 | \$ (55,218) |

The fair value of our financial instruments at September 30, 2018, is presented below by time period and fair value source:

| Source of Fair Value | Fair Value of Contracts at September 30, 2018 | | | | |
|--|---|--------|------|----------------|------------------|
| | Maturity in years | | | | Total Fair Value |
| | Less than 1 | 1-3 | 4-5 | Greater than 5 | |
| | (In thousands) | | | | |
| Prices actively quoted | \$ (55,365) | \$ 147 | \$ — | \$ — | \$ (55,218) |
| Prices based on models and other valuation methods | — | — | — | — | — |
| Total Fair Value | \$ (55,365) | \$ 147 | \$ — | \$ — | \$ (55,218) |

Employee Benefits Programs

An important element of our total compensation program, and a significant component of our operation and maintenance expense, is the offering of various benefits programs to our employees. These programs include medical and dental insurance coverage and pension and postretirement programs.

Medical and Dental Insurance

We offer medical and dental insurance programs to substantially all of our employees. We believe these programs are compliant with all current regulatory provisions and are consistent with other programs in our industry. In recent years, we have endeavored to actively manage our health care costs through the introduction of a wellness strategy that is focused on helping employees to identify health risks and to manage these risks through improved lifestyle choices.

Over the last five fiscal years, we have experienced annual medical and prescription inflation of approximately seven percent. For fiscal 2019, we anticipate the medical and prescription drug inflation rate will increase at approximately six percent, primarily due to the inflation of health care costs and normalization of large claim activity.

Net Periodic Pension and Postretirement Benefit Costs

For the fiscal year ended September 30, 2018, our total net periodic pension and other benefits costs was \$41.4 million, compared with \$49.0 million and \$46.0 million for the fiscal years ended September 30, 2017 and 2016. These costs are recoverable through our rates. A portion of these costs is capitalized into our distribution rate base and the remaining costs are recorded as a component of operation and maintenance expense.

Our fiscal 2018 costs were determined using a September 30, 2017 measurement date. At that date, interest and corporate bond rates utilized to determine our discount rates were higher than the interest and corporate bond rates as of September 30, 2016, the measurement date for our fiscal 2017 net periodic cost. Therefore, we increased the discount rate used to measure our fiscal 2018 net periodic cost from 3.73 percent to 3.89 percent. We lowered the expected return on plan assets from 7.00 percent to 6.75 percent in the determination of our fiscal 2018 net periodic pension cost based upon expected market returns for our targeted asset allocation. On October 20, 2017, the Society of Actuaries released its annually-updated mortality improvement scale for pension plans incorporating new assumptions surrounding life expectancies in the United States. As of September 30, 2017, we updated our assumed mortality rates to incorporate the updated mortality table. As a result of the net impact of changes in these and other assumptions, our fiscal 2018 pension and postretirement medical costs were higher than in the prior year.

Our fiscal 2017 costs were determined using a September 30, 2016 measurement date. At that date, interest and corporate bond rates utilized to determine our discount rates were lower than the interest and corporate bond rates as of September 30,

2015, the measurement date for our fiscal 2016 net periodic cost. Therefore, we decreased the discount rate used to measure our fiscal 2017 net periodic cost from 4.55 percent to 3.73 percent. We maintained the expected return on plan assets of 7.00 percent in the determination of our fiscal 2017 net periodic pension cost based upon expected market returns for our targeted asset allocation. On October 20, 2016, the Society of Actuaries released its annually-updated mortality improvement scale for pension plans incorporating new assumptions surrounding life expectancies in the United States. As of September 30, 2016, we updated our assumed mortality rates to incorporate the updated mortality table. As a result of the net impact of changes in these and other assumptions, our fiscal 2017 pension and postretirement medical costs were consistent with the prior year.

Pension and Postretirement Plan Funding

Generally, our funding policy is to contribute annually an amount that will at least equal the minimum amount required to comply with the Employee Retirement Income Security Act of 1974 (ERISA). However, additional voluntary contributions are made from time to time as considered necessary. Contributions are intended to provide not only for benefits attributed to service to date but also for those expected to be earned in the future.

In accordance with the Pension Protection Act of 2006 (PPA), we determined the funded status of our plans as of January 1, 2018, 2017 and 2016. Based on these valuations, we have not had a minimum required contribution for the last three fiscal years. However, we made voluntary contributions of \$7.0 million, \$5.0 million and \$15.0 million to our pension plans during fiscal 2018, 2017 and 2016 to achieve a desired PPA funding threshold.

We contributed \$17.4 million, \$13.7 million and \$16.6 million to our postretirement benefits plans for the fiscal years ended September 30, 2018, 2017 and 2016. The contributions represent the portion of the postretirement costs we are responsible for under the terms of our plan and minimum funding required by state regulatory commissions.

Outlook for Fiscal 2019 and Beyond

As of September 30, 2018, interest and corporate bond rates were higher than the rates as of September 30, 2017. Therefore, we increased the discount rate used to measure our fiscal 2019 net periodic cost from 3.89 percent to 4.38 percent. The expected return on plan assets remained consistent with the prior year at 6.75 percent in the determination of our fiscal 2019 net periodic pension cost based upon expected market returns for our targeted asset allocation. On October 23, 2018, the Society of Actuaries released its annually-updated mortality improvement scale for pension plans incorporating new assumptions surrounding life expectancies in the United States. As of September 30, 2018, we updated our assumed mortality rates to incorporate the updated mortality table. As a result of the net impact of changes in these and other assumptions, we expect our fiscal 2019 net periodic pension cost to be lower than fiscal 2018.

Based upon current market conditions, the current funded position of the plans and the funding requirements under the PPA, we do not anticipate a minimum required contribution for fiscal 2019. However, we may consider whether a voluntary contribution is prudent to maintain certain funding levels. The amount of this funding is contingent upon several factors, including the issuance of new mortality tables by the US Treasury Department used to establish plan funding requirements. With respect to our postretirement medical plans, we anticipate contributing between \$10 million and \$20 million during fiscal 2019.

Actual changes in the fair market value of plan assets and differences between the actual and expected return on plan assets could have a material effect on the amount of pension costs ultimately recognized. A 0.25 percent change in our discount rate would impact our pension and postretirement costs by approximately \$2.5 million. A 0.25 percent change in our expected rate of return would impact our pension and postretirement costs by approximately \$1.4 million.

The projected liability, future funding requirements and the amount of expense or income recognized for each of our pension and other post-retirement benefit plans are subject to change, depending on the actuarial value of plan assets, and the determination of future benefit obligations as of each subsequent calculation date. These amounts are impacted by actual investment returns, changes in interest rates, changes in the demographic composition of the participants in the plans and other actuarial assumptions.

RECENT ACCOUNTING DEVELOPMENTS

Recent accounting developments and their impact on our financial position, results of operations and cash flows are described in Note 2 to the consolidated financial statements.

ITEM 7A. *Quantitative and Qualitative Disclosures About Market Risk.*

We are exposed to risks associated with commodity prices and interest rates. Commodity price risk is the potential loss that we may incur as a result of changes in the fair value of a particular instrument or commodity. Interest-rate risk is the potential increased cost we could incur when we issue debt instruments or to provide financing and liquidity for our business activities. Additionally, interest-rate risk could affect our ability to issue cost effective equity instruments.

We conduct risk management activities in our distribution and pipeline and storage segments. In our distribution segment, we use a combination of physical storage, fixed-price forward contracts and financial instruments, primarily over-the-counter swap and option contracts, in an effort to minimize the impact of natural gas price volatility on our customers during the winter heating season. Our risk management activities and related accounting treatment are described in further detail in Note 13 to the consolidated financial statements. Additionally, our earnings are affected by changes in short-term interest rates as a result of our issuance of short-term commercial paper and our other short-term borrowings.

Commodity Price Risk

We purchase natural gas for our distribution operations. Substantially all of the costs of gas purchased for distribution operations are recovered from our customers through purchased gas cost adjustment mechanisms. Therefore, our distribution operations have limited commodity price risk exposure.

Interest Rate Risk

Our earnings are exposed to changes in short-term interest rates associated with our short-term commercial paper program and other short-term borrowings. We use a sensitivity analysis to estimate our short-term interest rate risk. For purposes of this analysis, we estimate our short-term interest rate risk as the difference between our actual interest expense for the period and estimated interest expense for the period assuming a hypothetical average one percent increase in the interest rates associated with our short-term borrowings. Had interest rates associated with our short-term borrowings increased by an average of one percent, our net interest expense would have increased by approximately \$0.2 million during 2018.

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

To the Shareholders and the Board of Directors of Atmos Energy Corporation

Opinion on the Financial Statements

We have audited the accompanying consolidated balance sheets of Atmos Energy Corporation (the "Company") as of September 30, 2018 and 2017, the related consolidated statements of income, comprehensive income, shareholders' equity, and cash flows, for each of the three years in the period ended September 30, 2018, and the related notes and financial statement schedule listed in the Index at Item 8 (collectively referred to as the "financial statements"). In our opinion, the consolidated financial statements present fairly, in all material respects, the financial position of the Company as of September 30, 2018 and 2017, and the results of its operations and its cash flows for each of the three years in the period ended September 30, 2018, in conformity with US generally accepted accounting principles.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States) (PCAOB), the Company's internal control over financial reporting as of September 30, 2018, based on criteria established in Internal Control-Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (2013 framework) and our report dated November 13, 2018 expressed an unqualified opinion thereon.

Basis for Opinion

These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on the Company's financial statements based on our audits. We are a public accounting firm registered with the PCAOB and are required to be independent with respect to the Company in accordance with the US federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission and the PCAOB.

We conducted our audits in accordance with the standards of the PCAOB. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement, whether due to error or fraud. Our audits included performing procedures to assess the risks of material misstatement of the financial statements, whether due to error or fraud, and performing procedures that respond to those risks. Such procedures include examining, on a test basis, evidence regarding the amounts and disclosures in the financial statements. Our audits also included evaluating the accounting principles used and significant estimates made by management, as well as evaluating the overall presentation of the financial statements. We believe that our audits provide a reasonable basis for our opinion.

/s/ Ernst & Young LLP

We have served as the Company's auditor since 1983.

ATMOS ENERGY CORPORATION
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

1. Nature of Business

Atmos Energy Corporation (“Atmos Energy” or the “Company”) and its subsidiaries are engaged in the regulated natural gas distribution and pipeline and storage businesses. Through our distribution business, we deliver natural gas through sales and transportation arrangements to over three million residential, commercial, public-authority and industrial customers through our six regulated distribution divisions in the service areas described below:

| Division | Service Area |
|---|--|
| Atmos Energy Colorado-Kansas Division | Colorado, Kansas |
| Atmos Energy Kentucky/Mid-States Division | Kentucky, Tennessee, Virginia ⁽¹⁾ |
| Atmos Energy Louisiana Division | Louisiana |
| Atmos Energy Mid-Tex Division | Texas, including the Dallas/Fort Worth metropolitan area |
| Atmos Energy Mississippi Division | Mississippi |
| Atmos Energy West Texas Division | West Texas |

(1) Denotes location where we have more limited service areas.

In addition, we transport natural gas for others through our distribution system. Our distribution business is subject to federal and state regulation and/or regulation by local authorities in each of the states in which our distribution divisions operate. Our corporate headquarters and shared-services function are located in Dallas, Texas, and our customer support centers are located in Amarillo and Waco, Texas.

Our pipeline and storage business, which is also subject to federal and state regulation, consists of the the pipeline and storage operations of our Atmos Pipeline–Texas (APT) Division and our natural gas transmission business in Louisiana. The APT division provides transportation and storage services to our Mid-Tex Division, other third-party local distribution companies, industrial and electric generation customers, as well as marketers and producers. As part of its pipeline operations, APT manages five underground storage facilities in Texas. We also provide ancillary services customary to the pipeline industry including parking arrangements, lending and sales of inventory on hand. Our natural gas transmission operations in Louisiana are comprised of a proprietary 21-mile pipeline located in the New Orleans, Louisiana area that is primarily used to aggregate gas supply for our distribution division in Louisiana under a long-term contract and on a more limited basis, to third parties.

2. Summary of Significant Accounting Policies

Principles of consolidation — The accompanying consolidated financial statements include the accounts of Atmos Energy Corporation and its wholly-owned subsidiaries. All material intercompany transactions have been eliminated; however, we have not eliminated intercompany profits when such amounts are probable of recovery under the affiliates’ rate regulation process.

Use of estimates — The preparation of financial statements in conformity with accounting principles generally accepted in the United States requires management to make estimates and assumptions that affect the reported amounts of assets, liabilities, revenues and expenses. The most significant estimates include the allowance for doubtful accounts, unbilled revenues, contingency accruals, pension and postretirement obligations, deferred income taxes, impairment of long-lived assets, risk management and trading activities, fair value measurements and the valuation of goodwill and other long-lived assets. Actual results could differ from those estimates.

Regulation — Our distribution and pipeline and storage operations are subject to regulation with respect to rates, service, maintenance of accounting records and various other matters by the respective regulatory authorities in the states in which we operate. Our accounting policies recognize the financial effects of the ratemaking and accounting practices and policies of the various regulatory commissions. Accounting principles generally accepted in the United States require cost-based, rate-regulated entities that meet certain criteria to reflect the authorized recovery of costs due to regulatory decisions in their financial statements. As a result, certain costs are permitted to be capitalized rather than expensed because they can be recovered through rates. We record certain costs as regulatory assets when future recovery through customer rates is considered probable. Regulatory liabilities are recorded when it is probable that revenues will be reduced for amounts that will be credited to customers through the ratemaking process. The amounts to be recovered or recognized are based upon historical experience and our understanding of the regulations. Further, regulation may impact the period in which revenues or expenses are recognized.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

Substantially all of our regulatory assets are recorded as a component of deferred charges and other assets and a portion of our regulatory liabilities are recorded as a component of other current liabilities and deferred credits and other liabilities. Deferred gas costs are recorded either in other current assets or liabilities and our regulatory excess deferred taxes and regulatory cost of removal obligation are reported separately. Significant regulatory assets and liabilities as of September 30, 2018 and 2017 included the following:

| | September 30 | |
|---|---------------------|-------------------|
| | 2018 | 2017 |
| | (In thousands) | |
| Regulatory assets: | | |
| Pension and postretirement benefit costs ⁽¹⁾ | \$ 6,496 | \$ 26,826 |
| Infrastructure mechanisms ⁽²⁾ | 96,739 | 46,437 |
| Deferred gas costs | 1,927 | 65,714 |
| Recoverable loss on reacquired debt | 8,702 | 11,208 |
| Deferred pipeline record collection costs | 20,467 | 11,692 |
| APT annual adjustment mechanism | — | 2,160 |
| Rate case costs | 2,741 | 2,629 |
| Other | 6,739 | 10,132 |
| | <u>\$ 143,811</u> | <u>\$ 176,798</u> |
| Regulatory liabilities: | | |
| Regulatory excess deferred taxes ⁽³⁾ | \$ 744,895 | \$ — |
| Regulatory cost of service reserve ⁽⁴⁾ | 22,508 | — |
| Regulatory cost of removal obligation | 522,175 | 521,330 |
| Deferred gas costs | 94,705 | 15,559 |
| Asset retirement obligation | 12,887 | 12,827 |
| APT annual adjustment mechanism | 35,228 | — |
| Pension and postretirement benefit costs | 69,113 | — |
| Other | 9,486 | 5,941 |
| | <u>\$ 1,510,997</u> | <u>\$ 555,657</u> |

(1) Includes \$6.5 million and \$9.4 million of pension and postretirement expense deferred pursuant to regulatory authorization.

(2) Infrastructure mechanisms in Texas and Louisiana allow for the deferral of all eligible expenses associated with capital expenditures incurred pursuant to these rules, including the recording of interest on the deferred expenses until the next rate proceeding (rate case or annual rate filing), at which time investment and costs would be recovered through base rates.

(3) The TCJA resulted in the remeasurement of the net deferred tax liability included in our rate base. Of this amount, \$5.2 million is recorded in other current liabilities. The period and timing of the return of the excess deferred taxes is being determined by regulators in each of our jurisdictions. See Note 12 for further information.

(4) Effective January 1, 2018, regulators in each of our service areas required us to establish a regulatory liability for the difference in recoverable federal taxes included in revenues based on the former 35% federal statutory rate and the new 21% federal statutory rate for service provided on or after January 1, 2018. The period and timing of the return of this liability to utility customers is being determined by regulators in each of our jurisdictions. See Note 12 for further information.

Revenue recognition — Sales of natural gas to our distribution customers are billed on a monthly basis; however, the billing cycle periods for certain classes of customers do not necessarily coincide with accounting periods used for financial reporting purposes. We follow the revenue accrual method of accounting for distribution segment revenues whereby revenues applicable to gas delivered to customers, but not yet billed under the cycle billing method, are estimated and accrued and the related costs are charged to expense.

On occasion, we are permitted to implement new rates that have not been formally approved by our state regulatory commissions, which are subject to refund. As permitted by accounting principles generally accepted in the United States, we recognize this revenue and establish a reserve for amounts that could be refunded based on our experience for the jurisdiction in which the rates were implemented.

Rates established by regulatory authorities are adjusted for increases and decreases in our purchased gas costs through purchased gas cost adjustment mechanisms. Purchased gas cost adjustment mechanisms provide gas distribution companies a method of recovering purchased gas costs on an ongoing basis without filing a rate case to address all of their non-gas costs.

There is no margin generated through purchased gas cost adjustments, but they provide a dollar-for-dollar offset to increases or decreases in our distribution segment's gas costs. The effects of these purchased gas cost adjustment mechanisms are recorded as deferred gas costs on our balance sheet.

Operating revenues for our pipeline and storage segment are recognized in the period in which volumes are transported.

Discontinued operations — Accounting policies specific to our discontinued natural gas marketing business are described in more detail in Note 15.

Cash and cash equivalents — We consider all highly liquid investments with an original maturity of three months or less to be cash equivalents.

Accounts receivable and allowance for doubtful accounts — Accounts receivable arise from natural gas sales to residential, commercial, industrial, municipal and other customers. We establish an allowance for doubtful accounts to reduce the net receivable balance to the amount we reasonably expect to collect based on our collection experience or where we are aware of a specific customer's inability or reluctance to pay. However, if circumstances change, our estimate of the recoverability of accounts receivable could be affected. Circumstances which could affect our estimates include, but are not limited to, customer credit issues, the level of natural gas prices, customer deposits and general economic conditions. Accounts are written off once they are deemed to be uncollectible.

Gas stored underground — Our gas stored underground is comprised of natural gas injected into storage to support the winter season withdrawals for our distribution operations. The average cost method is used for all of our distribution operations. Gas in storage that is retained as cushion gas to maintain reservoir pressure is classified as property, plant and equipment and is valued at cost.

Property, plant and equipment — Regulated property, plant and equipment is stated at original cost, net of contributions in aid of construction. The cost of additions includes direct construction costs, payroll related costs (taxes, pensions and other fringe benefits), administrative and general costs and an allowance for funds used during construction. The allowance for funds used during construction represents the estimated cost of funds used to finance the construction of major projects and are capitalized in the rate base for ratemaking purposes when the completed projects are placed in service. Interest expense of \$6.8 million, \$2.5 million and \$2.8 million was capitalized in 2018, 2017 and 2016.

Major renewals, including replacement pipe, and betterments that are recoverable under our regulatory rate base are capitalized while the costs of maintenance and repairs that are not capitalizable are charged to expense as incurred. The costs of large projects are accumulated in construction in progress until the project is completed. When the project is completed, tested and placed in service, the balance is transferred to the regulated plant in service account included in the rate base and depreciation begins.

Regulated property, plant and equipment is depreciated at various rates on a straight-line basis. These rates are approved by our regulatory commissions and are comprised of two components: one based on average service life and one based on cost of removal. Accordingly, we recognize our cost of removal expense as a component of depreciation expense. The related cost of removal accrual is reflected as a regulatory liability on the consolidated balance sheet. At the time property, plant and equipment is retired, removal expenses less salvage, are charged to the regulatory cost of removal accrual. The composite depreciation rate was 3.2 percent, 3.1 percent and 3.2 percent for the fiscal years ended September 30, 2018, 2017 and 2016.

Other property, plant and equipment is stated at cost. Depreciation is generally computed on the straight-line method for financial reporting purposes based upon estimated useful lives.

Asset retirement obligations — We record a liability at fair value for an asset retirement obligation when the legal obligation to retire the asset has been incurred with an offsetting increase to the carrying value of the related asset. Accretion of the asset retirement obligation due to the passage of time is recorded as an operating expense.

As of September 30, 2018 and 2017, we had asset retirement obligations of \$12.9 million and \$12.8 million. Additionally, we had \$7.5 million and \$7.8 million of asset retirement costs recorded as a component of property, plant and equipment that will be depreciated over the remaining life of the underlying associated assets.

We believe we have a legal obligation to retire our natural gas storage facilities. However, we have not recognized an asset retirement obligation associated with our storage facilities because we are not able to determine the settlement date of this obligation as we do not anticipate taking our storage facilities out of service permanently. Therefore, we cannot reasonably estimate the fair value of this obligation.

Impairment of long-lived assets — We periodically evaluate whether events or circumstances have occurred that indicate that other long-lived assets may not be recoverable or that the remaining useful life may warrant revision. When such events or circumstances are present, we assess the recoverability of long-lived assets by determining whether the carrying value will be

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

recovered through the expected future cash flows. In the event the sum of the expected future cash flows resulting from the use of the asset is less than the carrying value of the asset, an impairment loss equal to the excess of the asset's carrying value over its fair value is recorded.

Goodwill — We annually evaluate our goodwill balances for impairment during our second fiscal quarter or more frequently as impairment indicators arise. During the second quarter of fiscal 2018, we completed our annual goodwill impairment assessment using a qualitative assessment, as permitted under U.S. GAAP. We test goodwill for impairment at the reporting unit level on an annual basis and between annual tests if an event occurs or circumstances change that would more likely than not reduce the fair value of the reporting unit. Based on the assessment performed, we determined that our goodwill was not impaired. Although not applicable for the fiscal 2018 analysis, if the qualitative assessment resulted in impairment indicators, we would then use a present value technique based on discounted cash flows to estimate the fair value of our reporting units. These calculations are dependent on several subjective factors including the timing of future cash flows, future growth rates and the discount rate. An impairment charge is recognized if the carrying value of a reporting unit's goodwill exceeds its fair value.

Marketable securities — As of September 30, 2018 and 2017, all of our marketable securities were classified as available for sale. In accordance with the current authoritative accounting standards, these securities, including both debt and equity securities, are reported at market value with unrealized gains and losses shown as a component of accumulated other comprehensive income (loss). We regularly evaluate the performance of these investments on an individual investment by investment basis for impairment, taking into consideration the fund's purpose, volatility and current returns. If a determination is made that a decline in fair value is other than temporary, the related investment is written down to its estimated fair value. Beginning on October 1, 2018, changes in fair value of our equity available for sale securities will be recorded in net income as discussed further below in the *Recent accounting pronouncements* section.

Financial instruments and hedging activities — We use financial instruments to mitigate commodity price risk in our distribution and pipeline and storage segments and to mitigate interest rate risk. The objectives and strategies for using financial instruments have been tailored to our continuing business and are discussed in Note 13.

We record all of our financial instruments on the balance sheet at fair value, with changes in fair value ultimately recorded in the income statement. These financial instruments are reported as risk management assets and liabilities and are classified as current or noncurrent other assets or liabilities based upon the anticipated settlement date of the underlying financial instrument. We record the cash flow impact of our financial instruments in operating cash flows based upon their balance sheet classification.

The timing of when changes in fair value of our financial instruments are recorded in the income statement depends on whether the financial instrument has been designated and qualifies as a part of a hedging relationship or if regulatory rulings require a different accounting treatment. Changes in fair value for financial instruments that do not meet one of these criteria are recognized in the income statement as they occur.

Financial Instruments Associated with Commodity Price Risk

In our distribution segment, the costs associated with and the realized gains and losses arising from the use of financial instruments to mitigate commodity price risk are included in our purchased gas cost adjustment mechanisms in accordance with regulatory requirements. Therefore, changes in the fair value of these financial instruments are initially recorded as a component of deferred gas costs and recognized in the consolidated statement of income as a component of purchased gas cost when the related costs are recovered through our rates and recognized in revenue in accordance with accounting principles generally accepted in the United States. Accordingly, there is no earnings impact on our distribution segment as a result of the use of financial instruments.

Financial Instruments Associated with Interest Rate Risk

We manage interest rate risk, primarily when we plan to issue long-term debt. We currently manage this risk through the use of forward starting interest rate swaps to fix the Treasury yield component of the interest cost associated with anticipated financings. We designate these financial instruments as cash flow hedges at the time the agreements are executed. Unrealized gains and losses associated with the instruments are recorded as a component of accumulated other comprehensive income (loss). When the instruments settle, the realized gain or loss is recorded as a component of accumulated other comprehensive income (loss) and recognized as a component of interest expense over the life of the related financing arrangement. Hedge ineffectiveness to the extent incurred is reported as a component of interest expense. As of September 30, 2018 and September 30, 2017, no cash was required to be held in margin accounts.

Fair Value Measurements — We report certain assets and liabilities at fair value, which is defined as the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the

measurement date (exit price). We primarily use quoted market prices and other observable market pricing information in valuing our financial assets and liabilities and minimize the use of unobservable pricing inputs in our measurements.

Fair-value estimates also consider our own creditworthiness and the creditworthiness of the counterparties involved. Our counterparties consist primarily of financial institutions and major energy companies. This concentration of counterparties may materially impact our exposure to credit risk resulting from market, economic or regulatory conditions. We seek to minimize counterparty credit risk through an evaluation of their financial condition and credit ratings and the use of collateral requirements under certain circumstances.

Amounts reported at fair value are subject to potentially significant volatility based upon changes in market prices, including, but not limited to, the valuation of the portfolio of our contracts, maturity and settlement of these contracts and newly originated transactions and interest rates, each of which directly affect the estimated fair value of our financial instruments. We believe the market prices and models used to value these financial instruments represent the best information available with respect to closing exchange and over-the-counter quotations, time value and volatility factors underlying the contracts. Values are adjusted to reflect the potential impact of an orderly liquidation of our positions over a reasonable period of time under then current market conditions.

Authoritative accounting literature establishes a fair value hierarchy that prioritizes the inputs used to measure fair value based on observable and unobservable data. The hierarchy categorizes the inputs into three levels, with the highest priority given to unadjusted quoted prices in active markets for identical assets and liabilities (Level 1) and the lowest priority given to unobservable inputs (Level 3). The levels of the hierarchy are described below:

Level 1 — Represents unadjusted quoted prices in active markets for identical assets or liabilities. An active market for the asset or liability is defined as a market in which transactions for the asset or liability occur with sufficient frequency and volume to provide pricing information on an ongoing basis. Prices actively quoted on national exchanges are used to determine the fair value of most of our assets and liabilities recorded on our balance sheet at fair value.

Our Level 1 measurements consist primarily of our available-for-sale securities. The Level 1 measurements for investments in the Atmos Energy Corporation Master Retirement Trust (the Master Trust), Supplemental Executive Benefit Plan and postretirement benefit plan consist primarily of exchange-traded financial instruments.

Level 2 — Represents pricing inputs other than quoted prices included in Level 1 that are either directly or indirectly observable for the asset or liability as of the reporting date. These inputs are derived principally from, or corroborated by, observable market data. Our Level 2 measurements primarily consist of non-exchange-traded financial instruments, such as over-the-counter options and swaps and municipal and corporate bonds where market data for pricing is observable. The Level 2 measurements for investments in our Master Trust, Supplemental Executive Benefit Plan and postretirement benefit plan consist primarily of non-exchange traded financial instruments such as corporate bonds and government securities.

Level 3 — Represents generally unobservable pricing inputs which are developed based on the best information available, including our own internal data, in situations where there is little if any market activity for the asset or liability at the measurement date. The pricing inputs utilized reflect what a market participant would use to determine fair value. We currently do not have any Level 3 investments.

Pension and other postretirement plans — Pension and other postretirement plan costs and liabilities are determined on an actuarial basis and are affected by numerous assumptions and estimates including the market value of plan assets, estimates of the expected return on plan assets, assumed discount rates and current demographic and actuarial mortality data. Our measurement date is September 30. The assumed discount rate and the expected return are the assumptions that generally have the most significant impact on our pension costs and liabilities. The assumed discount rate, the assumed health care cost trend rate and assumed rates of retirement generally have the most significant impact on our postretirement plan costs and liabilities.

The discount rate is utilized principally in calculating the actuarial present value of our pension and postretirement obligation and net pension and postretirement cost. When establishing our discount rate, we consider high quality corporate bond rates based on bonds available in the marketplace that are suitable for settling the obligations, changes in those rates from the prior year and the implied discount rate that is derived from matching our projected benefit disbursements with currently available high quality corporate bonds.

The expected long-term rate of return on assets is utilized in calculating the expected return on plan assets component of the annual pension and postretirement plan cost. We estimate the expected return on plan assets by evaluating expected bond returns, equity risk premiums, asset allocations, the effects of active plan management, the impact of periodic plan asset rebalancing and historical performance. We also consider the guidance from our investment advisors when making a final determination of our expected rate of return on assets. To the extent the actual rate of return on assets realized over the course of a year is greater than or less than the assumed rate, that year's annual pension or postretirement plan cost is not affected. Rather, this gain or loss is amortized over the expected future working lifetime of the plan participants.

The expected return on plan assets is then calculated by applying the expected long-term rate of return on plan assets to the market-related value of the plan assets. The market-related value of our plan assets represents the fair market value of the plan assets, adjusted to smooth out short-term market fluctuations over a five-year period. The use of this calculation will delay the impact of current market fluctuations on the pension expense for the period.

We use a corridor approach to amortize actuarial gains and losses. Under this approach, net gains or losses in excess of ten percent of the larger of the pension benefit obligation or the market-related value of the assets are amortized on a straight-line basis. The period of amortization is the average remaining service of active participants who are expected to receive benefits under the plan.

We estimate the assumed health care cost trend rate used in determining our annual postretirement net cost based upon our actual health care cost experience, the effects of recently enacted legislation and general economic conditions. Our assumed rate of retirement is estimated based upon the annual review of our participant census information as of the measurement date.

Income taxes — Income taxes are determined based on the liability method, which results in income tax assets and liabilities arising from temporary differences. Temporary differences are differences between the tax bases of assets and liabilities and their reported amounts in the financial statements that will result in taxable or deductible amounts in future years. The liability method requires the effect of tax rate changes on accumulated deferred income taxes to be reflected in the period in which the rate change was enacted. The liability method also requires that deferred tax assets be reduced by a valuation allowance unless it is more likely than not that the assets will be realized.

The Company may recognize the tax benefit from uncertain tax positions only if it is at least more likely than not that the tax position will be sustained on examination by the taxing authorities, based on the technical merits of the position. The tax benefits recognized in the financial statements from such a position should be measured based on the largest benefit that has a greater than fifty percent likelihood of being realized upon settlement with the taxing authorities. We recognize accrued interest related to unrecognized tax benefits as a component of interest expense. We recognize penalties related to unrecognized tax benefits as a component of miscellaneous income (expense) in accordance with regulatory requirements.

Tax collections — We are allowed to recover from customers revenue-related taxes that are imposed upon us. We record such taxes as operating expenses and record the corresponding customer charges as operating revenues. However, we do collect and remit various other taxes on behalf of various governmental authorities, and we record these amounts in our consolidated balance sheets on a net basis. We do not collect income taxes from our customers on behalf of governmental authorities.

Contingencies — In the normal course of business, we are confronted with issues or events that may result in a contingent liability. These generally relate to lawsuits, claims made by third parties or the action of various regulatory agencies. For such matters, we record liabilities when they are considered probable and estimable, based on currently available facts and our estimates of the ultimate outcome or resolution of the liability in the future. Actual results may differ from estimates, depending on actual outcomes or changes in the facts or expectations surrounding each potential exposure.

Subsequent events — Except as noted in Note 5 and 6 regarding the public offering of senior notes, no events occurred subsequent to the balance sheet date that would require recognition or disclosure in the financial statements.

Recent accounting pronouncements

Accounting pronouncements adopted in fiscal 2018

In February 2018, the Financial Accounting Standards Board (FASB) issued new guidance as a result of the Tax Cuts and Jobs Act of 2017 (the "TCJA"), related to the treatment of certain tax effects from accumulated other comprehensive income. The new guidance allows entities to reclassify from accumulated other comprehensive income to retained earnings the stranded tax effects resulting from the adoption of the TCJA. The new guidance will be effective for us in the fiscal year beginning on October 1, 2019 and for interim periods within that year. Early adoption is permitted, including adoption in any interim period for public business entities for reporting periods for which financial statements have not yet been issued and should be applied either in the period of adoption or retrospectively to each period (or periods) in which the effect of the change in the U.S. federal corporate income tax rate in the Tax Cuts and Jobs Act is recognized. We have early adopted the new standard effective as of September 30, 2018, and reclassified the stranded tax effects of \$22.9 million, resulting from the TCJA from accumulated other comprehensive income to retained earnings. This change is reflected on our consolidated statement of shareholders' equity.

In January 2017, the FASB issued new guidance that simplified the accounting for goodwill impairments by eliminating step 2 from the goodwill impairment test. Under the new guidance, if the carrying amount of a reporting unit exceeds its fair value, an impairment loss will be recognized in an amount equal to that excess, limited to the total amount of goodwill allocated to that reporting unit. We early adopted the new standard, effective for our goodwill impairment test performed in our second

fiscal quarter of 2018. The new standard did not have a material impact on our results of operations, consolidated balance sheets or cash flows.

Accounting pronouncements that will be effective in fiscal 2019

In May 2014, the FASB issued a comprehensive new revenue recognition standard that superseded virtually all existing revenue recognition guidance under generally accepted accounting principles in the United States. Under the new standard, an entity recognizes revenue when it transfers promised goods or services to customers in an amount that reflects the consideration to which the company expects to be entitled in exchange for those goods or services. In doing so, companies may need to use more judgment and make more estimates than under current guidance. The new guidance will become effective for us October 1, 2018 and can be applied either retrospectively to each period presented or as a cumulative-effect adjustment as of the date of adoption.

We have completed the evaluation of our sources of revenue and the impact that the new guidance will have on our financial position, results of operations, cash flows and business processes. Based on this evaluation, we do not believe the implementation of the new guidance will have a material effect on our financial position, results of operations, cash flows or business processes. We intend to apply the new guidance using the modified retrospective method on the date of adoption. The most impactful change from the adoption of this standard will be the disclosure requirements. In the first quarter of fiscal 2019, we will add a new revenue footnote which will contain a disaggregation of revenues from contracts with customers by customer type.

In March 2017, the FASB issued new guidance related to the income statement presentation of the components of net periodic benefit cost for an entity's sponsored defined benefit pension and other postretirement plans. The new guidance requires entities to disaggregate the current service cost component of the net benefit cost from the other components and present it with other current compensation costs for related employees in the statement of income. The other components of net benefit cost will be presented outside of income from operations on the statement of income. In addition, only the service cost component of net benefit cost is eligible for capitalization (e.g., as part of inventory or property, plant, and equipment). The Federal Energy Regulatory Commission ("FERC"), which regulates interstate transmission pipelines and also establishes, through its Uniform System of Accounts, accounting practices for rate-regulated entities, has issued guidance that states it will permit an election to either continue to capitalize non-service benefit costs or to cease capitalizing such costs for regulatory purposes. Accounting guidelines by the FERC are typically also followed by state commissions. As such, we plan to continue to capitalize into property, plant and equipment all components of net periodic benefit cost for ratemaking purposes and will defer the non-service cost components as a regulatory asset for U.S. GAAP reporting purposes. The new guidance will be effective for us in the fiscal year beginning on October 1, 2018 and for interim periods within that year. The standard requires retrospective application for presentation of non-service cost components outside of income from operations in the statement of income and prospective application of the change in eligible costs for capitalization. We do not anticipate the new standard will have a material impact on our financial position, results of operations and cash flows.

In January 2016, the FASB issued guidance related to the classification and measurement of financial instruments. The amendments modify the accounting and presentation for certain financial liabilities and equity investments not consolidated or reported using the equity method. The guidance is effective for us beginning October 1, 2018. The standard will require that changes in fair value of our available-for-sale equity securities be recorded in net income. However, the accounting for our available-for-sale debt securities remains unchanged as a result of this guidance. The new guidance will be applied by means of a cumulative-effect adjustment to the balance sheet as of the beginning of fiscal year 2019. We expect to record a cumulative-effect adjustment of approximately \$8 million from accumulated other comprehensive income to retained earnings. We do not anticipate the new standard will have a material impact on our financial position, results of operations or cash flows.

In August 2018, the FASB issued new guidance aligning the requirements for capitalizing implementation costs incurred in a hosting arrangement that is a service contract with the requirements for capitalizing implementation costs incurred to develop or obtain internal-use software (and hosting arrangements that include an internal-use software license). The amendments require a customer in a hosting arrangement that is a service contract to follow the guidance in Subtopic 350-40 to determine which implementation costs to capitalize as an asset related to the service contract and which costs to expense. The new guidance is effective for us in the fiscal year beginning October 1, 2020 and for interim periods within that year. Early adoption is permitted, including adoption in any interim period. The amendments should be applied either retrospectively or prospectively to all implementation costs incurred after the date of adoption. We intend to early adopt the guidance prospectively as of the fiscal year beginning October 1, 2018. We do not anticipate the new standard will have a material impact on our financial position, results of operations or cash flows.

Recently issued accounting pronouncements that will be effective after fiscal 2019

In February 2016, the FASB issued a comprehensive new leasing standard that will require lessees to recognize a lease liability and a right-of-use asset for all leases, including operating leases, with a term greater than 12 months on its balance sheet. The new standard will be effective for us beginning on October 1, 2019; early adoption is permitted. The new leasing standard requires modified retrospective transition, which requires application of the new guidance at the beginning of the earliest comparative period presented in the year of adoption. Additionally, in January 2018, the FASB issued amendments to the standard that provides a practical expedient for entities to not evaluate existing or expired land easements that were not previously accounted for as leases under the current guidance. In July 2018, the FASB issued an amendment to the standard that provides an additional and optional transition method to adopt the standard at the adoption date and recognize a cumulative-effect adjustment to the opening balance of retained earnings in the period of adoption. We are currently evaluating the effect of this standard and amendments on our financial position, results of operations, cash flows and business processes.

In June 2016, the FASB issued new guidance which will require credit losses on most financial assets measured at amortized cost and certain other instruments to be measured using an expected credit loss model. Under this model, entities will estimate credit losses over the entire contractual term of the instrument from the date of initial recognition of that instrument. In contrast, current U.S. GAAP is based on an incurred loss model that delays recognition of credit losses until it is probable the loss has been incurred. The new guidance also introduces a new impairment recognition model for available-for-sale securities that will require credit losses for available-for-sale debt securities to be recorded through an allowance account. The new standard will be effective for us beginning on October 1, 2021; early adoption is permitted beginning on October 1, 2019. We are currently evaluating the potential impact of this new guidance on our financial position, results of operations and cash flows.

In August 2018, the FASB issued new guidance that modifies the disclosure requirements for employers that sponsor defined benefit pension or other postretirement plans. The guidance removes the disclosure requirements for the amounts of gain/loss and prior service cost/credit amortization expected in the following year and the disclosure of the effect of a one-percentage-point change in the health care cost trend rate, among other changes. The guidance adds certain disclosures including the weighted average interest crediting rate for cash balance plans and a narrative description for the significant change in gains and losses as well as any other significant change in the plan obligations or assets. The new guidance is effective for us in the fiscal year beginning October 1, 2020 and should be applied on a retrospective basis to all periods presented. Early adoption is permitted. The adoption of this new guidance impacts only our disclosures; however we are still evaluating the timing of our adoption.

3. Segment Information

As of September 30, 2018, we manage and review our consolidated operations through the following three reportable segments:

- The *distribution segment* is primarily comprised of our regulated natural gas distribution and related sales operations in eight states.
- The *pipeline and storage segment* is comprised primarily of the pipeline and storage operations of our Atmos Pipeline-Texas division and our natural gas transmission operations in Louisiana.
- The *natural gas marketing segment* is comprised of our discontinued natural gas marketing business.

Our determination of reportable segments considers the strategic operating units under which we manage sales of various products and services to customers in differing regulatory environments. Although our distribution segment operations are geographically dispersed, they are aggregated and reported as a single segment as each natural gas distribution division has similar economic characteristics. In addition, because the pipeline and storage operations of our Atmos Pipeline-Texas division and our natural gas transmission operations in Louisiana have similar economic characteristics, they have been aggregated and reported as a single segment.

The accounting policies of the segments are the same as those described in the summary of significant accounting policies. We evaluate performance based on net income or loss of the respective operating units. We allocate interest and pension expense to the pipeline and storage segment; however, there is no debt or pension liability recorded on the pipeline and storage segment balance sheet. All material intercompany transactions have been eliminated; however, we have not eliminated intercompany profits when such amounts are probable of recovery under the affiliates' rate regulation process. Income taxes are allocated to each segment as if each segment's taxes were calculated on a separate return basis.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

Income statements and capital expenditures by segment are shown in the following tables.

| | Year Ended September 30, 2018 | | | |
|--|-------------------------------|----------------------|--------------|--------------|
| | Distribution | Pipeline and Storage | Eliminations | Consolidated |

| Total operating revenues | \$ 3,115,546 | \$ 2,759,735 | \$ 2,454,648 |

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

Balance sheet information at September 30, 2018 and 2017 by segment is presented in the following tables.

| September 30, 2018 | | | | |
|------------------------------------|-------------------------|---------------------|-----------------------|----------------------|
| Distribution | Pipeline and Storage | Eliminations | Consolidated | |
| (In thousands) | | | | |
| Property, plant and equipment, net | \$ 7,644,693 | \$ 2,726,454 | \$ — | \$ 10,371,147 |
| Total assets | <u>\$ 11,109,128</u> | <u>\$ 2,963,480</u> | <u>\$ (2,198,171)</u> | <u>\$ 11,874,437</u> |

| September 30, 2017 | | | | |
|------------------------------------|-------------------------|---------------------|-----------------------|----------------------|
| Distribution | Pipeline and Storage | Eliminations | Consolidated | |
| (In thousands) | | | | |
| Property, plant and equipment, net | \$ 6,849,517 | \$ 2,409,665 | \$ — | \$ 9,259,182 |
| Total assets | <u>\$ 10,050,164</u> | <u>\$ 2,621,601</u> | <u>\$ (1,922,169)</u> | <u>\$ 10,749,596</u> |

4. Earnings Per Share

We use the two-class method of computing earnings per share because we have participating securities in the form of non-vested restricted stock units with a nonforfeitable right to dividend equivalents, for which vesting is predicated solely on the passage of time. The calculation of earnings per share using the two-class method excludes income attributable to these participating securities from the numerator and excludes the dilutive impact of those shares from the denominator.

Basic and diluted earnings per share for the fiscal years ended September 30 are calculated as follows:

| | 2018 | 2017 | 2016 |
|---|---------------------------------------|-------------------|-------------------|
| | (In thousands, except per share data) | | |
| Basic and Diluted Earnings Per Share from continuing operations | | | |
| Income from continuing operations | \$ 603,064 | \$ 382,711 | \$ 345,542 |
| Less: Income from continuing operations allocated to participating securities | 580 | 475 | 538 |
| Income from continuing operations available to common shareholders | <u>\$ 602,484</u> | <u>\$ 382,236</u> | <u>\$ 345,004</u> |
| Basic and diluted weighted average shares outstanding | <u>111,012</u> | <u>106,100</u> | <u>103,524</u> |
| Income from continuing operations per share — Basic and Diluted | <u>\$ 5.43</u> | <u>\$ 3.60</u> | <u>\$ 3.33</u> |
| Basic and Diluted Earnings Per Share from discontinued operations | | | |
| Income from discontinued operations | \$ — | \$ 13,710 | \$ 4,562 |
| Less: Income from discontinued operations allocated to participating securities | — | 12 | 8 |
| Income from discontinued operations available to common shareholders | <u>\$ —</u> | <u>\$ 13,698</u> | <u>\$ 4,554</u> |
| Basic and diluted weighted average shares outstanding | <u>111,012</u> | <u>106,100</u> | <u>103,524</u> |
| Income from discontinued operations per share - Basic and Diluted | <u>\$ —</u> | <u>\$ 0.13</u> | <u>\$ 0.05</u> |
| Net Income per share — Basic and Diluted | <u>\$ 5.43</u> | <u>\$ 3.73</u> | <u>\$ 3.38</u> |

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

5. Debt

Long-term debt

Long-term debt at September 30, 2018 and 2017 consisted of the following:

| | 2018 | 2017 |
|--|---------------------|---------------------|
| | (In thousands) | |
| Unsecured 8.50% Senior Notes, due March 2019 | \$ 450,000 | \$ 450,000 |
| Unsecured 3.00% Senior Notes, due 2027 | 500,000 | 500,000 |
| Unsecured 5.95% Senior Notes, due 2034 | 200,000 | 200,000 |
| Unsecured 5.50% Senior Notes, due 2041 | 400,000 | 400,000 |

| | <u>\$ 2,493,665</u> | <u>\$ 3,067,045</u> |

(1) Up to \$200 million can be drawn under this term loan.

Maturities of long-term debt at September 30, 2018 were as follows (in thousands):

| | |
|------------|---------------------|
| 2019 | \$ 575,000 |
| 2020 | — |
| 2021 | — |
| 2022 | — |
| 2023 | — |
| Thereafter | 2,510,000 |
| | <u>\$ 3,085,000</u> |

On October 4, 2018, we completed a public offering of \$600 million of 4.30% senior notes due 2048. We received net proceeds from the offering, after the underwriting discount and estimated offering expenses, of approximately \$591 million, that were used to repay working capital borrowings pursuant to our commercial paper program. The effective interest rate of these notes is 4.37% after giving effect to the offering costs.

On June 8, 2017, we completed a public offering of \$500 million of 3.00% senior notes due 2027 and \$250 million of 4.125% senior notes due 2044. The effective rate of these notes is 3.12% and 4.40%, after giving effect to the offering costs and the settlement of the associated forward starting interest rate swaps. The net proceeds, excluding the loss on the settlement of the interest rate swaps of \$37 million, of approximately \$753 million were used to repay our \$250 million 6.35% senior unsecured notes at maturity on June 15, 2017 and for general corporate purposes, including the repayment of working capital borrowings pursuant to our commercial paper program.

We utilize short-term debt to provide cost-effective, short-term financing until it can be replaced with a balance of long-term debt and equity financing that achieves the Company's desired capital structure with an equity-to-capitalization ratio between 50% and 60%, inclusive of long-term and short-term debt. Our short-term borrowing requirements are affected primarily by the seasonal nature of the natural gas business. Changes in the price of natural gas and the amount of natural gas we need to supply our customers' needs could significantly affect our borrowing requirements. Our short-term borrowings typically reach their highest levels in the winter months.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

Currently, our short-term borrowing requirements are satisfied through a combination of a \$1.5 billion commercial paper program and three committed revolving credit facilities with third-party lenders that provide approximately \$1.5 billion of total working capital funding. The primary source of our funding is our commercial paper program, which is supported by a five-year unsecured \$1.5 billion credit facility. On March 26, 2018, we executed one of our two one-year extension options which extended the maturity date from September 25, 2021 to September 25, 2022. The facility bears interest at a base rate or at a LIBOR-based rate for the applicable interest period, plus a spread ranging from zero percent to 1.25 percent, based on the Company's credit ratings. Additionally, the facility contains a \$250 million accordion feature, which provides the opportunity to increase the total committed loan to \$1.75 billion. At September 30, 2018 and 2017, there was \$575.8 million and \$447.7 million outstanding under our commercial paper program with weighted average interest rates of 2.15% and 1.25%, with weighted average maturities of less than one month.

Additionally, we have a \$25 million 364-day unsecured facility, which was renewed on April 1, 2018 and expires March 31, 2019, and a \$10 million 364-day unsecured revolving credit facility, which is used primarily to issue letters of credit and which was renewed on September 30, 2018. At September 30, 2018, there were no borrowings outstanding under either of these facilities; however, outstanding letters of credit reduced the total amount available to us under our \$10 million unsecured revolving facility to \$4.4 million.

The availability of funds under these credit facilities is subject to conditions specified in the respective credit agreements, all of which we currently satisfy. These conditions include our compliance with financial covenants and the continued accuracy of representations and warranties contained in these agreements. We are required by the financial covenants in each of these facilities to maintain, at the end of each fiscal quarter, a ratio of total debt to total capitalization of no greater than 70 percent. At September 30, 2018, our total-debt-to-total-capitalization ratio, as defined, was 44 percent. In addition, both the interest margin and the fee that we pay on unused amounts under each of these facilities are subject to adjustment depending upon our credit ratings.

These credit facilities and our public indentures contain usual and customary covenants for our business, including covenants substantially limiting liens, substantial asset sales and mergers. Additionally, our public debt indentures relating to our senior notes and debentures, as well as certain of our revolving credit agreements, each contain a default provision that is triggered if outstanding indebtedness arising out of any other credit agreements in amounts ranging from in excess of \$15 million to in excess of \$100 million becomes due by acceleration or is not paid at maturity. We were in compliance with all of our debt covenants as of September 30, 2018. If we were unable to comply with our debt covenants, we would likely be required to repay our outstanding balances on demand, provide additional collateral or take other corrective actions.

6. Shareholders' Equity

Shelf Registration, At-the-Market Equity Sales Program and Equity Issuance

On March 28, 2016, we filed a registration statement with the Securities and Exchange Commission (SEC) that originally permitted us to issue, from time to time, up to \$2.5 billion in common stock and/or debt securities, which expires March 28, 2019. At September 30, 2018, approximately \$650.0 million of securities remained available for issuance under the shelf registration statement. The issuance of our \$600 million senior unsecured notes in October 2018, as discussed in Note 5, effectively exhausted this shelf registration statement.

On November 14, 2017, we filed a prospectus supplement under the registration statement relating to an at-the-market (ATM) equity sales program under which we may issue and sell shares of our common stock up to an aggregate offering price of \$500 million, which expires March 28, 2019. During the year ended September 30, 2018, no shares of common stock were sold under our ATM equity sales program.

On November 30, 2017, we filed a prospectus supplement under the registration statement relating to an underwriting agreement to sell 4,558,404 shares of our common stock for \$400 million. After expenses, net proceeds from the offering were \$395.1 million.

1998 Long-Term Incentive Plan

In August 1998, the Board of Directors approved and adopted the 1998 Long-Term Incentive Plan (LTIP), which became effective in October 1998 after approval by our shareholders. The LTIP is a comprehensive, long-term incentive compensation plan providing for discretionary awards of incentive stock options, non-qualified stock options, stock appreciation rights, bonus stock, time-lapse restricted stock, time-lapse restricted stock units, performance-based restricted stock units and stock units to certain employees and non-employee directors of the Company and our subsidiaries. The objectives of this plan include attracting and retaining the best available personnel, providing for additional performance incentives and promoting our success by providing employees with the opportunity to acquire our common stock.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

Accumulated Other Comprehensive Income (Loss)

We record deferred gains (losses) in accumulated other comprehensive income (AOCI) related to available-for-sale securities, which include equity and debt securities, interest rate agreement cash flow hedges and commodity contract cash flow hedges. Deferred gains (losses) for our available-for-sale securities and commodity contract cash flow hedges are recognized in earnings upon settlement, while deferred gains (losses) related to our interest rate agreement cash flow hedges are recognized in earnings as a component of interest expense, as they are amortized. The following tables provide the components of our accumulated other comprehensive income (loss) balances, net of the related tax effects allocated to each component of other comprehensive income (loss). Additionally, as discussed further in Note 2, we have early adopted a new accounting standard effective as of September 30, 2018. The adoption resulted in a reclassification of the stranded tax effects resulting from the TCJA, from accumulated other comprehensive income to retained earnings, as seen in the table below.

| | Available- for-Sale Securities | Interest Rate Agreement Cash Flow Hedges | Total |
|--|--------------------------------------|--|--------------------|
| (In thousands) | | | |
| September 30, 2017 | \$ 7,048 | \$ (112,302) | \$ (105,254) |

| Total reclassifications | <u>\$ 4,141</u> | Net of tax |

(1) Amounts are presented as part of income from discontinued operations on the consolidated statements of income.

(2) Our available-for-sale securities include both debt and equity securities.

7. Retirement and Post-Retirement Employee Benefit Plans

We have both funded and unfunded noncontributory defined benefit plans that together cover most of our employees. We also maintain post-retirement plans that provide health care benefits to retired employees. Finally, we sponsor a defined contribution plan that covers substantially all employees. These plans are discussed in further detail below.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

As a rate regulated entity, we generally recover our pension costs in our rates over a period of up to 15 years. The amounts that have not yet been recognized in net periodic pension cost that have been recorded as regulatory assets or liabilities are as follows:

| | Defined Benefit Plan | Supplemental Executive Retirement Plans | Postretirement Plans | Total |
|--|-------------------------|---|-------------------------|--------------------|
| | (In thousands) | | | |
| September 30, 2018 | | | | |
| Unrecognized prior service (credit) cost | \$ (1,047) | \$ — | \$ 1,298 | \$ 251 |
| Unrecognized actuarial (gain) loss | (2,310) | 33,912 | (100,966) | (69,364) |

| | <u>\$ 61,110</u> | <u>\$ 42,170</u> | <u>\$ (85,887)</u> | <u>\$ 17,393</u> |

Defined Benefit Plans*Employee Pension Plan*

As of September 30, 2018, we maintained one defined benefit plan, the Atmos Energy Corporation Pension Account Plan (the Plan). The assets of the Plan are held within the Atmos Energy Corporation Master Retirement Trust (the Master Trust). The Plan is a cash balance pension plan that was established effective January 1999 and covers most of the employees of Atmos Energy that were hired on or before September 30, 2010. The plan was closed to new participants effective October 1, 2010.

Opening account balances were established for participants as of January 1999 equal to the present value of their respective accrued benefits under the pension plans which were previously in effect as of December 31, 1998. The Plan credits an allocation to each participant's account at the end of each year according to a formula based on the participant's age, service and total pay (excluding incentive pay). In addition, at the end of each year, a participant's account is credited with interest on the employee's prior year account balance. Participants are fully vested in their account balances after three years of service and may choose to receive their account balances as a lump sum or an annuity.

Generally, our funding policy is to contribute annually an amount in accordance with the requirements of the Employee Retirement Income Security Act of 1974, including the funding requirements under the Pension Protection Act of 2006 (PPA). However, additional voluntary contributions are made from time to time as considered necessary. Contributions are intended to provide not only for benefits attributed to service to date but also for those expected to be earned in the future.

During fiscal 2018 and 2017 we contributed \$7.0 million and \$5.0 million in cash to the Plan to achieve a desired level of funding while maximizing the tax deductibility of this payment. Based upon market conditions at September 30, 2018, the current funded position of the Plan and the funding requirements under the PPA, we do not anticipate a minimum required contribution for fiscal 2019. However, we may consider whether a voluntary contribution is prudent to maintain certain funding levels.

We make investment decisions and evaluate performance of the assets in the Master Trust on a medium-term horizon of at least three to five years. We also consider our current financial status when making recommendations and decisions regarding the Master Trust's assets. Finally, we strive to ensure the Master Trust's assets are appropriately invested to maintain an acceptable level of risk and meet the Master Trust's long-term asset investment policy adopted by the Board of Directors.

To achieve these objectives, we invest the Master Trust's assets in equity securities, fixed income securities, interests in commingled pension trust funds, other investment assets and cash and cash equivalents. Investments in equity securities are diversified among the market's various subsectors in an effort to diversify risk and maximize returns. Fixed income securities are invested in investment grade securities. Cash equivalents are invested in securities that either are short term (less than 180 days) or readily convertible to cash with modest risk.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

The following table presents asset allocation information for the Master Trust as of September 30, 2018 and 2017.

| Security Class | Targeted Allocation Range | Actual Allocation September 30 | |
|------------------------|------------------------------|--------------------------------------|-------|
| | | 2018 | 2017 |
| Domestic equities | 35%-55% | 44.3% | 43.9% |
| International equities | 10%-20% | 15.4% | 17.2% |
| Fixed income | 5%-30% | 16.9% | 10.6% |
| Company stock | 0%-15% | 12.7% | 11.8% |
| Other assets | 0%-20% | 10.7% | 16.5% |

At September 30, 2018 and 2017, the Plan held 716,700 shares of our common stock which represented 12.7 percent and 11.8 percent of total Plan assets. These shares generated dividend income for the Plan of approximately \$1.4 million and \$1.7 million during fiscal 2018 and 2017.

Our employee pension plan expenses and liabilities are determined on an actuarial basis and are affected by numerous assumptions and estimates including the market value of plan assets, estimates of the expected return on plan assets and assumed discount rates and demographic data. We review the estimates and assumptions underlying our employee pension plans annually based upon a September 30 measurement date. The development of our assumptions is fully described in our significant accounting policies in Note 2. The actuarial assumptions used to determine the pension liability for the Plan was determined as of September 30, 2018 and 2017 and the actuarial assumptions used to determine the net periodic pension cost for the Plan was determined as of September 30, 2017, 2016 and 2015. On October 23, 2018, the Society of Actuaries released its annually-updated mortality improvement scale for pension plans incorporating new assumptions surrounding life expectancies in the United States. As of September 30, 2018, we updated our assumed mortality rates to incorporate the updated mortality table.

Additional assumptions are presented in the following table:

| | Pension Liability | | Pension Cost | | |
|--------------------------------|----------------------|-------|--------------|-------|-------|
| | 2018 | 2017 | 2018 | 2017 | 2016 |
| Discount rate | 4.38% | 3.89% | 3.89% | 3.73% | 4.55% |
| Rate of compensation increase | 3.50% | 3.50% | 3.50% | 3.50% | 3.50% |
| Expected return on plan assets | 6.75% | 6.75% | 6.75% | 7.00% | 7.00% |

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

The following table presents the Plan's accumulated benefit obligation, projected benefit obligation and funded status as of September 30, 2018 and 2017:

| | 2018 | 2017 |
|--|-------------------|--------------------|
| | (In thousands) | |
| Accumulated benefit obligation | <u>\$ 478,750</u> | <u>\$ 505,355</u> |
| Change in projected benefit obligation: | | |
| Benefit obligation at beginning of year | \$ 533,455 | \$ 545,480 |
| Service cost | 17,264 | 18,109 |
| Interest cost | 20,803 | 20,443 |
| Actuarial (gain) loss | (29,087) | (16,347) |
| Benefits paid | (37,716) | (34,230) |
| Benefit obligation at end of year | <u>504,719</u> | <u>533,455</u> |
| Change in plan assets: | | |
| Fair value of plan assets at beginning of year | 508,244 | 473,950 |

| Expected return on assets | (27,666) | (27,975) | (27,522) |
| Amortization of prior service credit | (231) | (231) | (226) |
| Recognized actuarial loss | 9,114 | 12,744 | 10,693 |
| Net periodic pension cost | <u>\$ 19,284</u> | <u>\$ 23,090</u> | <u>\$ 22,557</u> |

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

The following table sets forth by level, within the fair value hierarchy, the Plan's assets at fair value as of September 30, 2018 and 2017. As required by authoritative accounting literature, assets are categorized in their entirety based on the lowest level of input that is significant to the fair value measurement. The methods used to determine fair value for the assets held by the Plan are fully described in Note 2. Investments in our common/collective trusts and limited partnerships that are measured at net asset value per share equivalent are not classified in the fair value hierarchy. The net asset value amounts presented are intended to reconcile the fair value hierarchy to the total investments. In addition to the assets shown below, the Plan had net accounts receivable of \$2.0 million and \$0.6 million at September 30, 2018 and 2017, which materially approximates fair value due to the short-term nature of these assets.

| Assets at Fair Value as of September 30, 2018 | | | | |
|---|-------------------|------------------|-------------|-------------------|
| | Level 1 | Level 2 | Level 3 | Total |

| Registered investment companies | 64,102 | — | — | 64,102 |
| Government securities: | | | | |
| Mortgage-backed securities | — | 15,664 | — | 15,664 |
| U.S. treasuries | 5,129 | 822 | — | 5,951 |
| Corporate bonds | — | 32,314 | — | 32,314 |
| Total assets in the fair value hierarchy | <u>\$ 234,141</u> | <u>\$ 58,388</u> | <u>\$ —</u> | <u>292,529</u> |
| Investments measured at net asset value: | | | | |
| Common/collective trusts ⁽¹⁾ | | | | 150,976 |
| Limited partnerships ⁽¹⁾ | | | | 64,135 |
| Total investments at fair value | | | | <u>\$ 507,640</u> |

(1) The fair value of our common/collective trusts and limited partnerships are measured using the net asset value per share practical expedient. There are no redemption restrictions, redemption notice periods or unfunded commitments for these investments. The redemption frequency is daily.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

Supplemental Executive Retirement Plans

We have three nonqualified supplemental plans which provide additional pension, disability and death benefits to our officers, division presidents and certain other employees of the Company.

The first plan is referred to as the Supplemental Executive Benefits Plan (SEBP) and covers our officers, division presidents and certain other employees of the Company who were employed on or before August 12, 1998. The SEBP is a defined benefit arrangement which provides a benefit equal to 75 percent of covered compensation under which benefits paid from the underlying qualified defined benefit plan are an offset to the benefits under the SEBP.

In August 1998, we adopted the Supplemental Executive Retirement Plan (SERP) (formerly known as the Performance-Based Supplemental Executive Benefits Plan), which covers all officers or division presidents selected to participate in the plan between August 12, 1998 and August 5, 2009 and any corporate officer who was appointed to the Management Committee through December 31, 2016. The SERP is a defined benefit arrangement which provides a benefit equal to 60 percent of covered compensation under which benefits paid from the underlying qualified defined benefit plan are an offset to the benefits under the SERP.

Effective August 5, 2009, we adopted a new defined benefit Supplemental Executive Retirement Plan (the 2009 SERP), for corporate officers, division presidents or any other employees selected at the discretion of the Board. Under the 2009 SERP, a nominal account has been established for each participant, to which the Company contributes at the end of each calendar year an amount equal to ten percent (25 percent for members of the Management Committee appointed on or after January 1, 2017) of the total of each participant's base salary and cash incentive compensation earned during each prior calendar year, beginning December 31, 2009. The benefits vest after three years of service and attainment of age 55 and earn interest credits at the same annual rate as the Company's Pension Account Plan (currently 4.69%).

Due to the retirement of certain executives, during fiscal 2018 we recognized a one-time settlement charge of \$4.2 million associated with our SERP and paid \$13.9 million in lump sums in relation to the retirements.

Similar to our employee pension plans, we review the estimates and assumptions underlying our supplemental plans annually based upon a September 30 measurement date using the same techniques as our employee pension plans. The actuarial assumptions used to determine the pension liability for the supplemental plans were determined as of September 30, 2018 and 2017 and the actuarial assumptions used to determine the net periodic pension cost for the supplemental plans were determined as of September 30, 2017, 2016 and 2015. These assumptions are presented in the following table:

| | Pension Liability | | Pension Cost | | |
|-------------------------------|-------------------|-------|--------------|-------|-------|
| | 2018 | 2017 | 2018 | 2017 | 2016 |
| Discount rate ⁽¹⁾ | 4.38% | 3.89% | 4.08% | 3.73% | 4.55% |
| Rate of compensation increase | 3.50% | 3.50% | 3.50% | 3.50% | 3.50% |

(1) Reflects a weighted average discount rate for pension cost for fiscal 2018 due to settlements during the year.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

The following table presents the supplemental plans' accumulated benefit obligation, projected benefit obligation and funded status as of September 30, 2018 and 2017:

| | 2018 | 2017 |
|--|----------------|--------------|
| | (In thousands) | |
| Accumulated benefit obligation | \$ 116,943 | \$ 130,070 |
| Change in projected benefit obligation: | | |
| Benefit obligation at beginning of year | \$ 134,480 | \$ 142,574 |
| Service cost | 1,332 | 2,756 |
| Interest cost | 4,988 | 4,744 |
| Actuarial (gain) loss | (1,020) | (2,452) |
| Benefits paid | (4,523) | (4,588) |
| Settlements | (13,887) | (8,554) |
| Benefit obligation at end of year | 121,370 | 134,480 |
| Change in plan assets: | | |
| Fair value of plan assets at beginning of year | — | — |
| Employer contribution | 18,410 | 13,142 |
| Benefits paid | (4,523) | (4,588) |
| Settlements | (13,887) | (8,554) |
| Fair value of plan assets at end of year | — | — |
| Reconciliation: | | |
| Funded status | (121,370) | (134,480) |
| Unrecognized prior service cost | — | — |
| Unrecognized net loss | — | — |
| Accrued pension cost | \$ (121,370) | \$ (134,480) |

Assets for the supplemental plans are held in separate rabbi trusts. At September 30, 2018 and 2017, assets held in the rabbi trusts consisted of available-for-sale securities of \$46.5 million and \$42.9 million, which are included in our fair value disclosures in Note 14.

Net periodic pension cost for the supplemental plans for fiscal 2018, 2017 and 2016 is recorded as operating expense and included the following components:

| | Fiscal Year Ended September 30 | | |
|---|--------------------------------|-----------|-----------|
| | 2018 | 2017 | 2016 |
| | (In thousands) | | |
| Components of net periodic pension cost: | | | |
| Service cost | \$ 1,332 | \$ 2,756 | \$ 2,371 |
| Interest cost | 4,988 | 4,744 | 5,185 |
| Recognized actuarial loss | 3,079 | 4,251 | 2,586 |
| Settlements | 4,159 | 2,685 | — |
| Net periodic pension cost | \$ 13,558 | \$ 14,436 | \$ 10,142 |

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

Estimated Future Benefit Payments

The following benefit payments for our defined benefit plans, which reflect expected future service, as appropriate, are expected to be paid in the following fiscal years:

| | Pension Plan | Supplemental Plans |
|-----------|-----------------|-----------------------|
| | (In thousands) | |
| 2019 | \$ 32,603 | \$ 10,475 |
| 2020 | 33,509 | 24,778 |
| 2021 | 35,838 | 4,597 |
| 2022 | 37,176 | 20,882 |
| 2023 | 38,684 | 12,735 |
| 2024-2028 | 206,563 | 43,070 |

Postretirement Benefits

We sponsor the Retiree Medical Plan for Retirees and Disabled Employees of Atmos Energy Corporation (the Atmos Retiree Medical Plan). This plan provides medical and prescription drug protection to all qualified participants based on their date of retirement. The Atmos Retiree Medical Plan provides different levels of benefits depending on the level of coverage chosen by the participants and the terms of predecessor plans; however, we generally pay 80 percent of the projected net claims and administrative costs and participants pay the remaining 20 percent. Effective January 1, 2015, for employees who had not met the participation requirements by September 30, 2009, the contribution rates for the Company are limited to a three percent cost increase in claims and administrative costs each year, with the participant responsible for the additional costs.

Generally, our funding policy is to contribute annually an amount in accordance with the requirements of ERISA. However, additional voluntary contributions are made annually as considered necessary. Contributions are intended to provide not only for benefits attributed to service to date but also for those expected to be earned in the future. We expect to contribute between \$10 million and \$20 million to our postretirement benefits plan during fiscal 2019.

We maintain a formal investment policy with respect to the assets in our postretirement benefits plan to ensure the assets funding the postretirement benefit plan are appropriately invested to maintain an acceptable level of risk. We also consider our current financial status when making recommendations and decisions regarding the postretirement benefits plan.

We currently invest the assets funding our postretirement benefit plan in diversified investment funds which consist of common stocks, preferred stocks and fixed income securities. The diversified investment funds may invest up to 75 percent of assets in common stocks and convertible securities. The following table presents asset allocation information for the postretirement benefit plan assets as of September 30, 2018 and 2017.

| <u>Security Class</u> | Actual Allocation September 30 | |
|------------------------------|--------------------------------------|-------|
| | 2018 | 2017 |
| Diversified investment funds | 97.5% | 97.5% |
| Cash and cash equivalents | 2.5% | 2.5% |

Similar to our employee pension and supplemental plans, we review the estimates and assumptions underlying our postretirement benefit plan annually based upon a September 30 measurement date using the same techniques as our employee pension plans. The actuarial assumptions used to determine the pension liability for our postretirement plan were determined as of September 30, 2018 and 2017 and the actuarial assumptions used to determine the net periodic pension cost for the postretirement plan were determined as of September 30, 2017, 2016 and 2015. The assumptions are presented in the following table:

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

Assumed health care cost trend rates have a significant effect on the amounts reported for the plan. A one-percentage point change in assumed health care cost trend rates would have the following effects on the latest actuarial calculations:

| | One-Percentage Point Increase | One-Percentage Point Decrease |
|--|----------------------------------|----------------------------------|
| | (In thousands) | |
| Effect on total service and interest cost components | \$ 4,228 | \$ (3,377) |
| Effect on postretirement benefit obligation | \$ 38,633 | \$ (31,872) |

We are currently recovering other postretirement benefits costs through our regulated rates in substantially all of our service areas under accrual accounting as prescribed by accounting principles generally accepted in the United States. Other postretirement benefits costs have been specifically addressed in rate orders in each jurisdiction served by our Kentucky/Mid-States, West Texas, Mid-Tex and Mississippi Divisions as well as our Kansas jurisdiction and Atmos Pipeline – Texas or have been included in a rate case and not disallowed. Management believes that this accounting method is appropriate and will continue to seek rate recovery of accrual-based expenses in its ratemaking jurisdictions that have not yet approved the recovery of these expenses.

The following tables set forth by level, within the fair value hierarchy, the Retiree Medical Plan’s assets at fair value as of September 30, 2018 and 2017. The methods used to determine fair value for the assets held by the Retiree Medical Plan are fully described in Note 2.

| Assets at Fair Value as of September 30, 2018 | | | | |
|---|-------------------|-----------------|-------------|-------------------|
| | Level 1 | Level 2 | Level 3 | Total |
| | (In thousands) | | | |

| 2024-2028 | 88,120 | 29,514 | — | 117,634 |

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

Defined Contribution Plan

The Atmos Energy Corporation Retirement Savings Plan and Trust (the Retirement Savings Plan) covers substantially all employees and is subject to the provisions of Section 401(k) of the Internal Revenue Code. Effective January 1, 2007, employees automatically become participants of the Retirement Savings Plan on the date of employment. Participants may elect a salary reduction up to a maximum of 65 percent of eligible compensation, as defined by the Plan, not to exceed the maximum allowed by the Internal Revenue Service. New participants are automatically enrolled in the Plan at a contribution rate of four percent of eligible compensation, from which they may opt out. We match 100 percent of a participant's contributions, limited to four percent of the participant's salary. Participants are eligible to receive matching contributions after completing one year of service, in which they are immediately vested. Participants are also permitted to take out a loan against their accounts subject to certain restrictions. Employees hired on or after October 1, 2010 participate in the enhanced plan in which participants receive a fixed annual contribution of four percent of eligible earnings to their Retirement Savings Plan account. Participants will continue to be eligible for company matching contributions of up to four percent of their eligible earnings and will be fully vested in the fixed annual contribution after three years of service.

Matching and fixed annual contributions to the Retirement Savings Plan are expensed as incurred and amounted to \$16.2 million, \$15.4 million and \$15.8 million for fiscal years 2018, 2017 and 2016. At September 30, 2018 and 2017, the Retirement Savings Plan held 3.2 percent and 3.7 percent of our outstanding common stock.

8. Stock and Other Compensation Plans***Stock-Based Compensation Plans***

Total stock-based compensation cost was \$23.9 million, \$23.1 million and \$24.6 million for the fiscal years ended September 30, 2018, 2017 and 2016. Of this amount, \$11.1 million, \$9.0 million and \$9.8 million was capitalized. Tax benefits related to stock-based compensation were \$2.3 million, \$4.4 million and \$5.0 million for the fiscal years ended September 30, 2018, 2017 and 2016.

1998 Long-Term Incentive Plan

We have a Long-Term Incentive Plan (LTIP), which provides a long-term incentive compensation plan providing for discretionary awards of incentive stock options, non-qualified stock options, stock appreciation rights, bonus stock, time-lapse restricted stock, time-lapse restricted stock units, performance-based restricted stock units and stock units to certain employees and non-employee directors of the Company and our subsidiaries. The objectives of this plan include attracting and retaining the best available personnel, providing for additional performance incentives and promoting our success by providing employees with the opportunity to acquire common stock.

As of September 30, 2018, we were authorized to grant awards for up to a maximum cumulative amount of 11.2 million shares of common stock under this plan subject to certain adjustment provisions. As of September 30, 2018, non-qualified stock options, bonus stock, time-lapse restricted stock, time-lapse restricted stock units, performance-based restricted stock units and stock units had been issued under this plan, and 1.8 million shares are available for future issuance through September 30, 2021.

Restricted Stock Units Award Grants

As noted above, the LTIP provides for discretionary awards of restricted stock units to help attract, retain and reward employees of Atmos Energy and its subsidiaries. Certain of these awards vest based upon the passage of time and other awards vest based upon the passage of time and the achievement of specified performance targets. The fair value of the awards granted is based on the market price of our stock at the date of grant. We estimate forfeitures using our historical forfeiture rate. The associated expense is recognized ratably over the vesting period. We use authorized and unissued shares to meet share requirements for the vesting of restricted stock units.

Employees who are granted time-lapse restricted stock units under our LTIP have a nonforfeitable right to dividend equivalents that are paid at the same rate and at the same time at which they are paid on shares of stock without restrictions. Time-lapse restricted stock units contain only a service condition that the employee recipients render continuous services to the Company for a period of three years from the date of grant, except for accelerated vesting in the event of death, disability, change of control of the Company or termination without cause (with certain exceptions). There are no performance conditions required to be met for employees to be vested in time-lapse restricted stock units.

Employees who are granted performance-based restricted stock units under our LTIP have a forfeitable right to dividend equivalents that accrue at the same rate at which they are paid on shares of stock without restrictions. Dividend equivalents on the performance-based restricted stock units are paid either in cash or in the form of shares upon the vesting of the award.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

Performance-based restricted stock units contain a service condition that the employee recipients render continuous services to the Company for a period of three years from the beginning of the applicable three-year performance period, except for accelerated vesting in the event of death, disability, change of control of the Company or termination without cause (with certain exceptions) and a performance condition based on a cumulative earnings per share target amount.

The following summarizes information regarding the restricted stock units granted under the plan during the fiscal years ended September 30, 2018, 2017 and 2016:

| | 2018 | | 2017 | | 2016 | |
|--------------------------------|----------------------------|--|----------------------------|--|----------------------------|--|
| | Number of Restricted Units | Weighted Average Grant-Date Fair Value | Number of Restricted Units | Weighted Average Grant-Date Fair Value | Number of Restricted Units | Weighted Average Grant-Date Fair Value |
| Nonvested at beginning of year | 570,814 | \$ 69.45 | 782,431 | \$ 57.66 | 878,104 | \$ 48.24 |
| Granted | 248,710 | 85.62 | 273,497 | 74.15 | 357,323 | 65.98 |
| Vested | (274,392) | 64.43 | (448,326) | 52.23 | (448,136) | 45.88 |
| Forfeited | (6,540) | 74.87 | (36,788) | 63.48 | (4,860) | 53.52 |
| Nonvested at end of year | 538,592 | \$ 80.91 | 570,814 | \$ 69.45 | 782,431 | \$ 57.66 |

As of September 30, 2018, there was \$11.5 million of total unrecognized compensation cost related to nonvested restricted stock units granted under the LTIP. That cost is expected to be recognized over a weighted average period of 1.6 years. The fair value of restricted stock vested during the fiscal years ended September 30, 2018, 2017 and 2016 was \$17.2 million, \$23.4 million and \$20.6 million.

Other Plans

Direct Stock Purchase Plan

We maintain a Direct Stock Purchase Plan, open to all investors, which allows participants to have all or part of their cash dividends paid quarterly in additional shares of our common stock. The minimum initial investment required to join the plan is \$1,250. Direct Stock Purchase Plan participants may purchase additional shares of our common stock as often as weekly with voluntary cash payments of at least \$25, up to an annual maximum of \$100,000.

Equity Incentive and Deferred Compensation Plan for Non-Employee Directors

We have an Equity Incentive and Deferred Compensation Plan for Non-Employee Directors, which provides non-employee directors of Atmos Energy with the opportunity to defer receipt, until retirement, of compensation for services rendered to the Company and invest deferred compensation into either a cash account or a stock account.

Other Discretionary Compensation Plans

We have an annual incentive program covering substantially all employees to give each employee an opportunity to share in our financial success based on the achievement of key performance measures considered critical to achieving business objectives for a given year with minimum and maximum thresholds. The Company must meet the minimum threshold for the plan to be funded and distributed to employees. These performance measures may include earnings growth objectives, improved cash flow objectives or crucial customer satisfaction and safety results. We monitor progress towards the achievement of the performance measures throughout the year and record accruals based upon the expected payout using the best estimates available at the time the accrual is recorded. During the last several fiscal years, we have used earnings per share as our sole performance measure.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

9. Details of Selected Consolidated Balance Sheet Captions

The following tables provide additional information regarding the composition of certain of our balance sheet captions.

Accounts receivable

Accounts receivable was comprised of the following at September 30, 2018 and 2017:

| | September 30 | |
|---------------------------------------|-------------------|-------------------|
| | 2018 | 2017 |
| (In thousands) | | |
| Billed accounts receivable | \$ 138,794 | \$ 135,091 |
| Unbilled revenue | 81,005 | 73,143 |
| Other accounts receivable | 48,291 | 24,894 |
| Total accounts receivable | 268,090 | 233,128 |
| Less: allowance for doubtful accounts | (14,795) | (10,865) |
| Net accounts receivable | <u>\$ 253,295</u> | <u>\$ 222,263</u> |

Other current assets

Other current assets as of September 30, 2018 and 2017 were comprised of the following accounts.

| | September 30 | |
|--|------------------|-------------------|
| | 2018 | 2017 |
| (In thousands) | | |
| Deferred gas costs | \$ 1,927 | \$ 65,714 |
| Prepaid expenses | 33,233 | 32,163 |
| Materials and supplies | 8,106 | 4,472 |
| Assets from risk management activities | 1,369 | 2,436 |
| Other | 1,420 | 1,536 |
| Total | <u>\$ 46,055</u> | <u>\$ 106,321</u> |

Property, plant and equipment

Property, plant and equipment was comprised of the following as of September 30, 2018 and 2017:

| | September 30 | |
|--|----------------------|---------------------|
| | 2018 | 2017 |
| (In thousands) | | |
| Storage plant | \$ 414,857 | \$ 369,510 |
| Transmission plant | 2,851,423 | 2,521,671 |
| Distribution plant | 8,141,733 | 7,306,021 |
| General plant | 771,355 | 765,728 |
| Intangible plant | 38,280 | 38,980 |
| | 12,217,648 | 11,001,910 |
| Construction in progress | 349,725 | 299,394 |
| | 12,567,373 | 11,301,304 |
| Less: accumulated depreciation and amortization | (2,196,226) | (2,042,122) |
| Net property, plant and equipment ⁽¹⁾ | <u>\$ 10,371,147</u> | <u>\$ 9,259,182</u> |

(1) Net property, plant and equipment includes plant acquisition adjustments of \$(55.5) million and \$(64.1) million at September 30, 2018 and 2017.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)
Goodwill

The following presents our goodwill balance allocated by segment and changes in the balance for the fiscal year ended September 30, 2018:

| | <u>Distribution</u> | <u>Pipeline and Storage</u> | <u>Total</u> |
|---|---------------------|---------------------------------|-------------------|
| | (In thousands) | | |
| Balance as of September 30, 2017 | \$ 587,080 | \$ 143,052 | \$ 730,132 |
| Deferred tax adjustments on prior acquisitions ⁽¹⁾ | 262 | 25 | 287 |
| Balance as of September 30, 2018 | <u>\$ 587,342</u> | <u>\$ 143,077</u> | <u>\$ 730,419</u> |

(1) We annually adjust certain deferred taxes recorded in connection with acquisitions completed in fiscal 2001 and fiscal 2005, which resulted in an increase to goodwill and net deferred tax liabilities of \$0.3 million for fiscal 2018.

Deferred charges and other assets

Deferred charges and other assets as of September 30, 2018 and 2017 were comprised of the following accounts.

| | <u>September 30</u> | |
|--|---------------------|-------------------|
| | <u>2018</u> | <u>2017</u> |
| | (In thousands) | |
| Marketable securities | \$ 99,385 | \$ 88,409 |
| Regulatory assets | 141,778 | 110,977 |
| Assets from risk management activities | 250 | 803 |
| Pension asset | 26,972 | — |
| Tax receivable | 10,099 | — |
| Other | 15,534 | 20,447 |
| Total | <u>\$ 294,018</u> | <u>\$ 220,636</u> |

Accounts payable and accrued liabilities

Accounts payable and accrued liabilities as of September 30, 2018 and 2017 were comprised of the following accounts.

| | <u>September 30</u> | |
|------------------------|---------------------|-------------------|
| | <u>2018</u> | <u>2017</u> |
| | (In thousands) | |
| Trade accounts payable | \$ 135,159 | \$ 143,422 |
| Accrued gas payable | 48,721 | 50,253 |
| Accrued liabilities | 33,403 | 39,375 |
| Total | <u>\$ 217,283</u> | <u>\$ 233,050</u> |

Other current liabilities

Other current liabilities as of September 30, 2018 and 2017 were comprised of the following accounts.

| | September 30 | |
|--|-------------------|-------------------|
| | 2018 | 2017 |
| | (In thousands) | |
| Customer credit balances and deposits | \$ 52,648 | \$ 54,627 |
| Accrued employee costs | 52,101 | 46,653 |
| Deferred gas costs | 94,705 | 15,559 |
| Accrued interest | 39,486 | 39,624 |
| Liabilities from risk management activities | 56,734 | 322 |
| Taxes payable | 123,457 | 116,291 |
| Pension and postretirement obligations | 10,475 | 18,411 |
| Regulatory cost of service reserve | 22,508 | — |
| Regulatory cost of removal obligation | 55,770 | 35,910 |
| APT annual adjustment mechanism | 19,918 | — |
| Regulatory excess deferred taxes (See Note 12) | 5,225 | — |
| Other | 14,041 | 5,251 |
| Total | \$ 547,068 | \$ 332,648 |

Deferred credits and other liabilities

Deferred credits and other liabilities as of September 30, 2018 and 2017 were comprised of the following accounts.

| | September 30 | |
|---|-------------------|-------------------|
| | 2018 | 2017 |
| | (In thousands) | |
| Customer advances for construction | \$ 11,010 | \$ 9,309 |
| Other regulatory liabilities | 78,599 | 5,257 |
| Asset retirement obligation | 12,887 | 12,827 |
| Liabilities from risk management activities | 103 | 112,076 |
| APT annual adjustment mechanism | 15,310 | — |
| Other | 40,119 | 36,266 |
| Total | \$ 158,028 | \$ 175,735 |

10. Leases

We have entered into operating leases for towers, office and warehouse space, vehicles and heavy equipment used in our operations. The remaining lease terms range from one to 13 years and generally provide for the payment of taxes, insurance and maintenance by the lessee. Renewal options exist for certain of these leases.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

The related future minimum lease payments at September 30, 2018 were as follows:

| | Operating Leases ⁽¹⁾ |
|-------------------------------------|------------------------------------|
| | (In thousands) |
| 2019 | \$ 17,655 |
| 2020 | 16,483 |
| 2021 | 16,202 |
| 2022 | 16,004 |
| 2023 | 15,621 |
| Thereafter | 22,226 |
| Total minimum lease payments | \$ 104,191 |

(1) Future minimum lease payments do not include amounts for fleet leases and other de minimis items that can be renewed beyond the initial lease term. The Company anticipates renewing the leases beyond the initial term, but the anticipated payments associated with the renewals do not meet the definition of expected minimum lease payments and therefore are not included above. Expected payments are \$17.7 million in 2019, \$14.7 million in 2020, \$11.3 million in 2021, \$8.0 million in 2022, \$4.6 million in 2023 and \$2.3 million thereafter.

Consolidated lease and rental expense amounted to \$33.8 million, \$32.7 million and \$32.6 million for fiscal 2018, 2017 and 2016.

11. Commitments and Contingencies

Litigation

In the normal course of business, we are subject to various legal and regulatory proceedings. For such matters, we record liabilities when they are considered probable and estimable, based on currently available facts, our historical experience, and our estimates of the ultimate outcome or resolution of the liability in the future. While the outcome of these proceedings is uncertain and a loss in excess of the amount we have accrued is possible though not reasonably estimable, it is the opinion of management that any amounts exceeding the accruals will not have a material adverse impact on our financial position, results of operations or cash flows.

We maintain liability insurance for various risks associated with the operation of our natural gas pipelines and facilities, including for property damage and bodily injury. These liability insurance policies generally require us to be responsible for the first \$1.0 million (self-insured retention) of each incident.

The National Transportation Safety Board (NTSB) is investigating an incident that occurred at a Dallas, Texas residence on February 23, 2018 that resulted in one fatality and injuries to four other residents. Together with the Railroad Commission of Texas and the Pipeline and Hazardous Materials Safety Administration, Atmos Energy is a party to the investigation and in that capacity is working closely with the NTSB to help determine the cause of this incident.

On March 29, 2018, a civil action was filed in Dallas, Texas against Atmos Energy in response to the February 23rd incident. The plaintiffs seek over \$1.0 million in damages for, among with others, wrongful death and personal injury.

We are a party to various other litigation or claims that have arisen in the ordinary course of our business. While the results of such litigation or claims cannot be predicted with certainty, we continue to believe the final outcome of such litigation or claims will not have a material adverse effect on our financial condition, results of operations or cash flows.

Environmental Matters

We are a party to environmental matters and claims that have arisen in the ordinary course of our business. While the ultimate results of response actions to these environmental matters and claims cannot be predicted with certainty, we believe the final outcome of such response actions will not have a material adverse effect on our financial condition, results of operations or cash flows because we believe that the expenditures related to such response actions will either be recovered through rates, shared with other parties or are adequately covered by insurance.

Purchase Commitments

Our distribution and pipeline and storage segments maintain supply contracts with several vendors that generally cover a period of up to one year. Commitments for estimated base gas volumes are established under these contracts on a monthly basis at contractually negotiated prices. Commitments for incremental daily purchases are made as necessary during the month in accordance with the terms of the individual contract.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

Our Mid-Tex Division maintains a limited number of long-term supply contracts to ensure a reliable source of gas for our customers in its service area which obligate it to purchase specified volumes at prices indexed to natural gas trading hubs. At September 30, 2018, we were committed to purchase 54.1 Bcf within one year and 37.2 Bcf within two to three years under indexed contracts. Purchases under these contracts totaled \$57.2 million, \$49.7 million and \$85.3 million for 2018, 2017 and 2016.

Regulatory Matters

The SEC and the Commodities Futures Trading Commission, pursuant to the Dodd–Frank Act, established numerous regulations relating to U.S. financial markets. We enacted procedures and modified existing business practices and contractual arrangements to comply with such regulations. There are, however, some rulemaking proceedings that have not yet been finalized, including those relating to capital and margin rules for (non–cleared) swaps. We do not expect these rules to directly impact our business practices or collateral requirements. However, depending on the substance of these final rules, in addition to certain international regulatory requirements still under development that are similar to Dodd–Frank, our swap counterparties could be subject to additional and potentially significant capitalization requirements. These regulations could motivate counterparties to increase our collateral requirements or cash postings.

As of September 30, 2018, formula rate mechanisms were pending regulatory approval in our Mississippi and Tennessee service areas, infrastructure mechanisms were pending regulatory approval in our Mississippi service area and rate cases were pending regulatory approval in our Kentucky, Mid-Tex, Virginia and West Texas service areas. These regulatory proceedings are discussed in further detail above in the *Business — Ratemaking Activity* section. Additionally, as discussed in further detail in Note 12, all jurisdictions are addressing impacts of the TCJA.

12. Income Taxes***Impact of the Tax Cuts and Jobs Act of 2017***

On December 22, 2017, the Tax Cuts and Jobs Act of 2017 (the "TCJA") was signed into law. The TCJA introduced several significant changes to corporate income tax laws in the United States. The most significant change that affects Atmos Energy is the reduction of the federal statutory income tax rate from 35% to 21%. As a rate-regulated entity, the accelerated capital expensing and the limitation on interest deductibility provisions included in the TCJA are not applicable to us.

Under generally accepted accounting principles, we use the asset and liability method of accounting for income taxes. Under this method, deferred tax assets and liabilities are recognized for the future tax consequences attributable to differences between the financial statement carrying amounts of existing assets and liabilities and their respective tax basis. Deferred tax assets and liabilities are measured using enacted tax rates expected to apply to taxable income in the years in which those temporary differences are expected to be recovered or settled.

At September 30, 2017, we measured our net deferred tax liability using the enacted federal statutory tax rate of 35%. The enactment of the TCJA on December 22, 2017 required us to remeasure our deferred tax assets and liabilities, including our U.S. federal income tax net operating loss carryforwards, at the newly enacted federal statutory income tax rate of 21%. As the Company's fiscal year end is September 30, 2018, the Internal Revenue Code requires the Company to use a blended statutory federal corporate income tax rate of 24.5% for fiscal 2018.

The decrease in the federal statutory income tax rate reduced our net deferred tax liability by \$905.3 million. Of this amount, \$746.5 million relates to regulated operations and has been recorded as a regulatory liability, a portion of which is currently being returned to utility customers in accordance with issued regulatory orders and the Internal Revenue Code. The remaining \$158.8 million has been reflected as a one-time income tax benefit in our consolidated statement of income for the year ended September 30, 2018, because these taxes are not related to our cost of service ratemaking.

The SEC issued guidance in Staff Accounting Bulletin 118 (SAB 118), which allows us to record provisional amounts during a one-year measurement period, similar to the measurement period in accounting for business combinations. The Company has determined a reasonable estimate for the measurement and accounting for certain effects of the TCJA, including the remeasurement of our net deferred tax liabilities and the establishment of a regulatory liability, which have been reflected as provisional amounts in the September 30, 2018 consolidated financial statements. The amounts represent our best estimates based upon records, information and current guidance. We are still analyzing certain aspects of the TCJA, refining our calculations and expecting additional guidance relating to the TCJA from the U.S. Department of the Treasury and the Internal Revenue Service. Any additional guidance issued or future actions of our regulators could potentially affect the final determination of the accounting effects arising from the implementation of the TCJA.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

We have and continue to work with our regulators in each jurisdiction to determine the amortization of the excess deferred taxes regulatory liability of \$746.5 million of which the balance is \$744.9 million as of September 30, 2018. In addition, we have recorded a cost of service regulatory liability of \$22.5 million as of September 30, 2018. Accounting orders were issued for all our service areas that required us to establish, effective January 1, 2018, a separate regulatory liability for the difference in taxes included in our rates that have been calculated based on a 35% statutory income tax rate and the new 21% statutory income tax rate. The establishment of this regulatory liability relating to our cost of service rates resulted in a reduction to our revenues beginning in the second quarter of fiscal 2018.

We have received approval from regulators to update our cost of service rates to reflect the decrease in the statutory income tax rate in our Colorado, Kansas, Kentucky, Louisiana and Texas service areas. We are still working with regulators in Mississippi, Tennessee and Virginia to reflect the effects of the lower statutory income tax rate in our cost of service in rates. As of September 30, 2018, we received approval from regulators to return amounts to customers related to the regulatory liabilities recorded for differences in our cost of service rates due to change in the federal statutory income tax rate in Colorado and Kansas.

As of September 30, 2018, we received approval from regulators to return amounts to customers related to the regulatory liabilities recorded for the excess deferred taxes created upon implementation of the TCJA in Colorado, Kentucky and Louisiana in accordance with regulatory proceedings on a provisional basis over periods ranging from 18 to 40 years. In our remaining jurisdictions, the treatment of the effects of the TCJA in rates is being addressed in ongoing or will be addressed in future regulatory proceedings.

Income Tax Expense

The components of income tax expense from continuing operations for 2018, 2017 and 2016 were as follows:

| | 2018 | 2017 | 2016 |
|------------------------|-----------------|-------------------|-------------------|
| | (In thousands) | | |
| Current | | | |
| Federal | \$ (10,099) | \$ — | \$ — |
| State | 11,075 | 9,022 | 5,667 |
| Deferred | | | |
| Federal | 150,556 | 197,013 | 178,630 |
| State | 15,330 | 15,348 | 12,350 |
| TCJA Impact | (158,782) | — | — |
| Investment tax credits | — | — | (5) |
| | <u>\$ 8,080</u> | <u>\$ 221,383</u> | <u>\$ 196,642</u> |

Reconciliations of the provision for income taxes computed at the statutory rate to the reported provisions for income taxes from continuing operations for 2018, 2017 and 2016 are set forth below:

| | 2018 | 2017 | 2016 |
|---|-----------------|-------------------|-------------------|
| | (In thousands) | | |
| Tax at statutory rate ⁽¹⁾ | \$ 149,730 | \$ 211,433 | \$ 189,764 |
| Common stock dividends deductible for tax reporting | (1,745) | (2,584) | (2,570) |
| State taxes (net of federal benefit) | 19,826 | 16,100 | 11,133 |
| Change in valuation allowance | — | — | 1,324 |
| Amortization of excess deferred taxes | (1,219) | — | — |
| Remeasurement due to TCJA | (158,782) | — | — |
| Other, net | 270 | (3,566) | (3,009) |
| Income tax expense | <u>\$ 8,080</u> | <u>\$ 221,383</u> | <u>\$ 196,642</u> |

(1) Tax expense is calculated at the statutory federal income tax rate of 24.5% for the year ended September 30, 2018 and 35% for the years ended September 30, 2017 and 2016.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

Deferred income taxes reflect the tax effect of differences between the basis of assets and liabilities for book and tax purposes. The tax effect of temporary differences that gave rise to significant components of the deferred tax liabilities and deferred tax assets at September 30, 2018 and 2017 are presented below:

| | 2018 | 2017 |
|--|----------------|----------------|
| | (In thousands) | |
| Deferred tax assets: | | |
| Employee benefit plans | \$ 72,745 | \$ 121,288 |
| Interest rate agreements | 27,135 | 65,171 |
| Net operating loss carryforwards | 461,481 | 555,043 |
| Charitable and other credit carryforwards | 6,818 | 18,873 |
| Regulatory excess deferred tax | 169,947 | — |
| Other | 13,804 | 10,218 |
| Total deferred tax assets | 751,930 | 770,593 |
| Valuation allowance | (1,465) | (5,403) |
| Net deferred tax assets | 750,465 | 765,190 |
| Deferred tax liabilities: | | |
| Difference in net book value and net tax value of assets | (1,859,787) | (2,528,485) |
| Pension funding | (6,986) | (13,101) |
| Gas cost adjustments | 1,005 | (60,376) |
| Other | (38,764) | (41,927) |
| Total deferred tax liabilities | (1,904,532) | (2,643,889) |
| Net deferred tax liabilities | \$ (1,154,067) | \$ (1,878,699) |
| Deferred credits for rate regulated entities | \$ 762 | \$ 985 |

At September 30, 2018, we had \$430.0 million of federal net operating loss carryforwards. The federal net operating loss carryforwards are available to offset taxable income and will begin to expire in 2029. The Company also has \$10.1 million of federal alternative minimum tax credit carryforwards, which do not expire and are expected to be fully refunded to us between 2019 and 2022 as a result of changes introduced by the TCJA. These credit carryforwards are now reflected as taxes receivable within the deferred charges and other assets line item on our consolidated balance sheet. In addition, the Company has \$5.3 million in remeasured charitable contribution carryforwards to offset future taxable income. The Company's charitable contribution carryforwards expiration period begins in 2019.

The Company also has \$31.4 million of state net operating loss carryforwards (net of \$8.4 million of remeasured federal effects) and \$1.5 million of state tax credits carryforwards (net of \$0.4 million of remeasured federal effects). Depending on the jurisdiction in which the state net operating loss was generated, the carryforwards expiration period begins in 2019.

Due to the changes introduced by the TCJA, we now believe it is more likely than not that the benefit from certain charitable contribution carryforwards for which a valuation allowance was previously established will be realized. As a result, we reduced our valuation allowance by \$4.2 million during the first quarter of fiscal 2018. This amount is included in the \$158.8 million one-time income tax benefit.

We believe it is more likely than not that the benefit from certain state net operating loss carryforwards and state credit carryforwards will not be realized. Due to the uncertainty of realizing a benefit from the deferred tax asset recorded for the carryforwards, a re-measured valuation allowance of \$1.5 million continues to be established for the year ended September 30, 2018. No additional valuation allowance was recorded for the year ended September 30, 2018.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

At September 30, 2018, we had recorded liabilities associated with unrecognized tax benefits totaling \$26.2 million. The following table reconciles the beginning and ending balance of our unrecognized tax benefits:

| | 2018 | 2017 | 2016 |
|---|------------------|------------------|------------------|
| | (In thousands) | | |
| Unrecognized tax benefits - beginning balance | \$ 23,719 | \$ 20,298 | \$ 17,069 |
| Increase (decrease) resulting from prior period tax positions | 22 | (366) | (290) |
| Increase resulting from current period tax positions | 2,462 | 3,787 | 3,519 |
| Unrecognized tax benefits - ending balance | 26,203 | 23,719 | 20,298 |
| Less: deferred federal and state income tax benefits | (5,503) | (8,302) | (7,104) |
| Total unrecognized tax benefits that, if recognized, would impact the effective income tax rate as of the end of the year | <u>\$ 20,700</u> | <u>\$ 15,417</u> | <u>\$ 13,194</u> |

The Company recognizes interest accrued related to unrecognized tax benefits in interest expense and penalties included within interest charges in our consolidated statement of income. During the years ended September 30, 2018, 2017 and 2016, the Company recognized approximately \$1.6 million, \$1.1 million and \$2.5 million in interest and penalties. The Company had approximately \$6.1 million, \$4.5 million and \$3.3 million for the payment of interest and penalties accrued at September 30, 2018, 2017 and 2016.

We file income tax returns in the U.S. federal jurisdiction as well as in various states where we have operations. We have concluded substantially all U.S. federal income tax matters through fiscal year 2009 and concluded substantially all Texas income tax matters through fiscal year 2010.

13. Financial Instruments

We use financial instruments to mitigate commodity price risk and interest rate risk. Our financial instruments do not contain any credit-risk-related or other contingent features that could cause accelerated payments when our financial instruments are in net liability positions.

As discussed in Note 2 and Note 15, we report our financial instruments as risk management assets and liabilities, each of which is classified as current or noncurrent based upon the anticipated settlement date of the underlying financial instrument. The following table shows the fair values of our risk management assets and liabilities at September 30, 2018 and 2017.

| | September 30 | |
|---|--------------------|---------------------|
| | 2018 | 2017 |
| | (In thousands) | |
| Assets from risk management activities, current | \$ 1,369 | \$ 2,436 |
| Assets from risk management activities, noncurrent | 250 | 803 |
| Liabilities from risk management activities, current | (56,734) | (322) |
| Liabilities from risk management activities, noncurrent | (103) | (112,076) |
| Net assets (liabilities) | <u>\$ (55,218)</u> | <u>\$ (109,159)</u> |

Commodity Risk Management Activities

Our purchased gas cost adjustment mechanisms essentially insulate our distribution segment from commodity price risk; however, our customers are exposed to the effects of volatile natural gas prices. We manage this exposure through a combination of physical storage, fixed-price forward contracts and financial instruments, primarily over-the-counter swap and option contracts, in an effort to minimize the impact of natural gas price volatility on our customers during the winter heating season.

Our distribution gas supply department is responsible for executing this segment's commodity risk management activities in conformity with regulatory requirements. In jurisdictions where we are permitted to mitigate commodity price risk through financial instruments, the relevant regulatory authorities may establish the level of heating season gas purchases that can be hedged. Historically, if the regulatory authority does not establish this level, we seek to hedge between 25 and 50 percent of anticipated heating season gas purchases using financial instruments. For the 2017-2018 heating season (generally October through March), in the jurisdictions where we are permitted to utilize financial instruments, we hedged approximately 26 percent, or approximately 15.0 Bcf of the winter flowing gas requirements at a weighted average cost of approximately \$3.20 per Mcf. We have not designated these financial instruments as hedges for accounting purposes.

Interest Rate Risk Management Activities

We currently manage interest rate risk through the use of forward starting interest rate swaps to fix the Treasury yield component of the interest cost associated with anticipated financings.

In October 2012, we entered into forward starting interest rate swaps to fix the Treasury yield component associated with \$210 million of the then anticipated issuance of \$250 million unsecured senior notes in fiscal 2017. These notes were issued as planned in June 2017 and we settled swaps with the payment of \$37.0 million. Because the swaps were effective, the realized loss was recorded as a component of accumulated other comprehensive income (loss) and is being recognized as a component of interest expense over the 27-year life of the senior notes.

Additionally, in fiscal 2014 and 2015, we entered into forward starting interest rate swaps to effectively fix the Treasury yield component associated with \$450 million of the anticipated issuance of \$450 million unsecured senior notes in fiscal 2019. We designated all of these swaps as cash flow hedges at the time the agreements were executed. Accordingly, unrealized gains and losses associated with the forward starting interest rate swaps will be recorded as a component of accumulated other comprehensive income (loss). When the forward starting interest rate swaps settle, the realized gain or loss will be recorded as a component of accumulated other comprehensive income (loss) and recognized as a component of interest expense over the life of the related financing arrangement. Hedge ineffectiveness to the extent incurred, will be reported as a component of interest expense.

Prior to fiscal 2012, we entered into several interest rate agreements to fix the Treasury yield component of the interest cost of financing for various issuances of long-term debt and senior notes. The gains and losses realized upon settlement of these interest rate agreements were recorded as a component of accumulated other comprehensive income (loss) when they were settled and are being recognized as a component of interest expense over the life of the associated notes from the date of settlement. The remaining amortization periods for the settled interest rate agreements extend through fiscal 2045.

Quantitative Disclosures Related to Financial Instruments

The following tables present detailed information concerning the impact of financial instruments on our consolidated balance sheet and income statements.

As of September 30, 2018, our financial instruments were comprised of both long and short commodity positions. A long position is a contract to purchase the commodity, while a short position is a contract to sell the commodity. As of September 30, 2018, we had 22,874 MMcf of net long commodity contracts outstanding. These contracts have not been designated as hedges.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

Financial Instruments on the Balance Sheet

The following tables present the fair value and balance sheet classification of our financial instruments as of September 30, 2018 and 2017. The gross amounts of recognized assets and liabilities are netted within our Consolidated Balance Sheets to the extent that we have netting arrangements with the counterparties.

Impact of Financial Instruments on the Income Statement

Cash Flow Hedges

As discussed above, our distribution segment has interest rate swap agreements, which we designated as a cash flow hedge at the time the swaps were executed. The net loss on settled interest rate agreements reclassified from AOCI into interest charges on our consolidated income statements for the years ended September 30, 2018, 2017 and 2016 was \$(2.4) million, \$(1.0) million and \$(0.5) million.

The following table summarizes the gains and losses arising from hedging transactions that were recognized as a component of other comprehensive income (loss), net of taxes, for the years ended September 30, 2018 and 2017. The amounts included in the table below exclude gains and losses arising from ineffectiveness because these amounts are immediately recognized in the income statement as incurred.

| | Fiscal Year Ended September 30 | |
|--|-----------------------------------|------------------|
| | 2018 | 2017 |
| (In thousands) | | |
| <i>Increase in fair value:</i> | | |
| Interest rate agreements | \$ 43,184 | \$ 74,560 |
| Forward commodity contracts ⁽¹⁾ | — | 9,847 |
| <i>Recognition of (gains) losses in earnings due to settlements:</i> | | |
| Interest rate agreements | 1,752 | 662 |
| Forward commodity contracts ⁽¹⁾ | — | (4,865) |
| Total other comprehensive income from hedging, net of tax⁽²⁾ | \$ 44,936 | \$ 80,204 |

(1) Due to the sale of AEM, these amounts are included in income from discontinued operations

(2) Utilizing an income tax rate of approximately 23 percent for fiscal 2018 and an income tax rate ranging from approximately 37 percent to 39 percent for fiscal 2017 based on the effective rates in each taxing jurisdiction.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

Deferred gains (losses) recorded in AOCI associated with our interest rate agreements are recognized in earnings as they are amortized. The following amounts, net of deferred taxes, represent the expected recognition in earnings of the deferred gains (losses) recorded in AOCI associated with our financial instruments, based upon the fair values of these financial instruments as of September 30, 2018. However, the table below does not include the expected recognition in earnings of our outstanding interest rate agreements as those financial instruments have not yet settled.

| | Interest Rate Agreements |
|----------------------------|-------------------------------------|
| | (In thousands) |
| 2019 | \$ (1,863) |
| 2020 | (1,893) |

| Total⁽¹⁾ | \$ (48,164) |

(1) Utilizing an income tax rate of approximately 23 percent.

Financial Instruments Not Designated as Hedges

As discussed above, financial instruments used in our distribution segment are not designated as hedges. However, there is no earnings impact on our distribution segment as a result of the use of these financial instruments because the gains and losses arising from the use of these financial instruments are recognized in the consolidated statement of income as a component of purchased gas cost when the related costs are recovered through our rates and recognized in revenue. Accordingly, the impact of these financial instruments is excluded from this presentation.

14. Fair Value Measurements

We report certain assets and liabilities at fair value, which is defined as the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date (exit price). We record cash and cash equivalents, accounts receivable and accounts payable at carrying value, which substantially approximates fair value due to the short-term nature of these assets and liabilities. For other financial assets and liabilities, we primarily use quoted market prices and other observable market pricing information to minimize the use of unobservable pricing inputs in our measurements when determining fair value. The methods used to determine fair value for our assets and liabilities are fully described in Note 2.

Fair value measurements also apply to the valuation of our pension and post-retirement plan assets. The fair value of these assets is presented in Note 7.

Quantitative Disclosures

Financial Instruments

The classification of our fair value measurements requires judgment regarding the degree to which market data are observable or corroborated by observable market data. The following tables summarize, by level within the fair value hierarchy, our assets and liabilities that were accounted for at fair value on a recurring basis as of September 30, 2018 and 2017. As required under authoritative accounting literature, assets and liabilities are categorized in their entirety based on the lowest level of input that is significant to the fair value measurement.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

| | Quoted Prices in Active Markets (Level 1) | Significant Other Observable Inputs, (Level 2) ⁽¹⁾ | Significant Other Unobservable Inputs (Level 3) | Netting and Cash Collateral | September 30, 2018 |

(1) Our Level 2 measurements consist of over-the-counter options and swaps, which are valued using a market-based approach in which observable market prices are adjusted for criteria specific to each instrument, such as the strike price, notional amount or basis differences, municipal and corporate bonds, which are valued based on the most recent available quoted market prices and money market funds which are valued at cost.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

Available-for-sale securities, which include debt and equity securities, are comprised of the following:

| | Amortized Cost | Gross Unrealized Gain | Gross Unrealized Loss | Fair Value |
|---------------------------------|-------------------|-----------------------------|-----------------------------|------------------|
| | (In thousands) | | | |
| As of September 30, 2018 | | | | |
| Domestic equity mutual funds | \$ 26,950 | \$ 9,363 | \$ (353) | \$ 35,960 |
| Foreign equity mutual funds | 4,656 | 2,028 | — | 6,684 |
| Bond mutual funds | 21,810 | — | (303) | 21,507 |
| Bonds | 31,511 | 13 | (124) | 31,400 |
| Money market funds | 3,834 | — | — | 3,834 |
| | <u>\$ 88,761</u> | <u>\$ 11,404</u> | <u>\$ (780)</u> | <u>\$ 99,385</u> |
| As of September 30, 2017 | | | | |
| Domestic equity mutual funds | \$ 25,361 | \$ 8,920 | \$ — | \$ 34,281 |
| Foreign equity mutual funds | 4,581 | 2,235 | — | 6,816 |
| Bond mutual funds | 16,391 | 2 | (22) | 16,371 |
| Bonds | 29,074 | 46 | (16) | 29,104 |
| Money market funds | 1,837 | — | — | 1,837 |
| | <u>\$ 77,244</u> | <u>\$ 11,203</u> | <u>\$ (38)</u> | <u>\$ 88,409</u> |

At September 30, 2018 and 2017, our available-for-sale securities included \$46.5 million and \$42.9 million related to assets held in separate rabbi trusts for our supplemental executive retirement plans as discussed in Note 7. At September 30, 2018 we maintained investments in bonds that have contractual maturity dates ranging from October 2018 through September 2021.

Other Fair Value Measures

In addition to the financial instruments above, we have several financial and nonfinancial assets and liabilities subject to fair value measures. These financial assets and liabilities include cash and cash equivalents, accounts receivable, accounts payable and debt. The nonfinancial assets and liabilities include asset retirement obligations and pension and post-retirement plan assets. We record cash and cash equivalents, accounts receivable, accounts payable and debt at carrying value. For cash and cash equivalents, accounts receivable and accounts payable, we consider carrying value to materially approximate fair value due to the short-term nature of these assets and liabilities.

Our debt is recorded at carrying value. The fair value of our debt is determined using third party market value quotations, which are considered Level 1 fair value measurements for debt instruments with a recent, observable trade or Level 2 fair value measurements for debt instruments where fair value is determined using the most recent available quoted market price. The following table presents the carrying value and fair value of our debt as of September 30, 2018:

| | September 30, 2018 (In thousands) |
|-----------------|--------------------------------------|
| Carrying Amount | \$ 3,085,000 |
| Fair Value | \$ 3,161,679 |

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

15. Discontinued Operations

On October 29, 2016, we entered into a Membership Interest Purchase Agreement (the Agreement) with CenterPoint Energy Services, Inc., a subsidiary of CenterPoint Energy, Inc. (CES) to sell all of the equity interests of AEM. The transaction closed on January 3, 2017, with an effective date of January 1, 2017. CES paid a cash purchase price of \$38.3 million plus working capital of \$109.0 million for total cash consideration of \$147.3 million. Of this amount, \$7.0 million was placed into escrow, to be paid to the Company within 24 months, net of any indemnification claims agreed upon between the two companies. In January 2018, \$3.0 million of this escrowed amount was released and received by the Company. We recognized a net gain of \$0.03 per diluted share on the sale in the second quarter of fiscal 2017 and completed the working capital true-up during the third quarter of fiscal 2017.

The operating results of our natural gas marketing reportable segment have been reported on the consolidated statements of income as income from discontinued operations, net of income tax for the years ended September 30, 2017 and 2016. Accordingly, expenses related to allocable general corporate overhead and interest expense are not included in these results. The decision to report this segment as a discontinued operation was predicated, in part, on the following qualitative and quantitative factors: 1) the disposal resulted in the company becoming a fully regulated entity; 2) the fact that an entire reportable segment was disposed and 3) the fact the disposed segment represented in excess of 30 percent of consolidated revenues over the last five fiscal years.

The tables below set forth selected financial information related to discontinued operations. Operating expenses include operation and maintenance expense, provision for doubtful accounts, depreciation and amortization expense and taxes, other than income. At September 30, 2018 and 2017 we did not have any assets or liabilities held for sale.

The following table presents statement of income data related to discontinued operations.

| | Year Ended September 30 | |
|--|-------------------------|--------------|
| | 2017 | 2016 |
| | (In thousands) | |
| Operating revenues | \$ 303,474 | \$ 1,005,090 |
| Purchased gas cost | 277,554 | 968,118 |
| Operating expenses | 7,874 | 26,184 |
| Operating income | 18,046 | 10,788 |
| Other nonoperating expense | (211) | (2,495) |
| Income from discontinued operations before income taxes | 17,835 | 8,293 |
| Income tax expense | 6,841 | 3,731 |
| Income from discontinued operations | 10,994 | 4,562 |
| Gain on sale from discontinued operations, net of tax (\$10,215 and \$0) | 2,716 | — |
| Net income from discontinued operations | \$ 13,710 | \$ 4,562 |

The following table presents statement of cash flow data related to discontinued operations.

| | Year Ended September 30 | |
|--|-------------------------|-------------|
| | 2017 | 2016 |
| | (In thousands) | |
| Depreciation and amortization | \$ 185 | \$ 2,304 |
| Capital expenditures | \$ — | \$ 321 |
| Non-cash loss in commodity contract cash flow hedges | \$ (8,165) | \$ (33,533) |

Significant Accounting Policies Related to Discontinued Operations

Except as noted below, AEM adhered to the same Significant Accounting Policies as described in Note 2.

Revenue recognition — Operating revenues for our natural gas marketing segment were recognized in the period in which actual volumes were transported and storage services were provided. Operating revenues for our natural gas marketing segment and the associated carrying value of natural gas inventory (inclusive of storage costs) were recognized when we sold

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

the gas and physically delivered it to our customers. Operating revenues include realized gains and losses arising from the settlement of financial instruments used in our natural gas marketing activities.

Gas stored underground — Gas stored underground was comprised of natural gas injected into storage to conduct the operations of the natural gas marketing segment. Our natural gas marketing segment utilized the average cost method; however, most of this inventory was hedged and was therefore reported at fair value at the end of each month.

Property, plant and equipment — Natural gas marketing property, plant and equipment was stated at cost. Depreciation was generally computed on the straight-line method for financial reporting purposes based upon estimated useful lives ranging from 3 to 30 years.

Financial instruments and hedging activities — In our natural gas marketing segment, we previously designated most of the natural gas inventory held by this operating segment as the hedged item in a fair-value hedge. This inventory was marked to market at the end of each month based on the Gas Daily index, with changes in fair value recognized as unrealized gains or losses in purchased gas cost, which is reflected in income from discontinued operations in the period of change. The financial instruments associated with this natural gas inventory were designated as fair-value hedges and were marked to market each month based upon the NYMEX price with changes in fair value recognized as unrealized gains or losses in purchased gas cost in the period of change. We elected to exclude this spot/forward differential for purposes of assessing the effectiveness of these fair-value hedges.

Additionally, we previously elected to treat fixed-price forward contracts used in our natural gas marketing segment to deliver natural gas as normal purchases and normal sales. As such, these deliveries were recorded on an accrual basis in accordance with our revenue recognition policy. Financial instruments used to mitigate the commodity price risk associated with these contracts were designated as cash flow hedges of anticipated purchases and sales at indexed prices. Accordingly, unrealized gains and losses on these open financial instruments were recorded as a component of accumulated other comprehensive income, and were recognized in earnings as a component of purchased gas cost which is reflected in income from discontinued operations when the hedged volumes were sold.

Gains and losses from hedge ineffectiveness were recognized in the income statement. Fair value and cash flow hedge ineffectiveness arising from natural gas market price differences between the locations of the hedged inventory and the delivery location specified in the financial instruments is referred to as basis ineffectiveness. Ineffectiveness arising from changes in the fair value of the fair value hedges due to changes in the difference between the spot price and the futures price, as well as the difference between the timing of the settlement of the futures and the valuation of the underlying physical commodity is referred to as timing ineffectiveness. Hedge ineffectiveness, to the extent incurred, is reported as a component of purchased gas cost reflected in income from discontinued operations for the years ended September 30, 2017 and 2016.

Our natural gas marketing segment also utilized master netting agreements with significant counterparties that allow us to offset gains and losses arising from financial instruments that would be settled in cash with gains and losses arising from financial instruments that could be settled with the physical commodity. Assets and liabilities from risk management activities, as well as accounts receivable and payable, reflect the master netting agreements in place. Additionally, the accounting guidance for master netting arrangements requires us to include the fair value of cash collateral or the obligation to return cash in the amounts that have been netted under master netting agreements used to offset gains and losses arising from financial instruments.

Fair Value Measurements — Our discontinued operations used the same fair value measurement policies as described in Note 2 for our continuing operations. Level 1 measurements included primarily exchange-traded financial instruments and gas stored underground that was been designated as the hedged item in a fair value hedge. Within our natural gas marketing operations, we utilized a mid-market pricing convention (the mid-point between the bid and ask prices), as permitted under current accounting standards. Values derived from these sources reflected the market in which transactions involving these financial instruments are executed. Level 2 measurements primarily consisted of non-exchange-traded financial instruments, such as over-the-counter options and swaps.

Short-term Debt Related to Discontinued Operations

AEM had one uncommitted \$25 million 364-day bilateral credit facility that was scheduled to expire on July 31, 2017 and one committed \$15 million 364-day bilateral credit facility that was scheduled to expire on September 30, 2017. In connection with the sale of AEM, both facilities were terminated on January 3, 2017.

Commodity Risk Management Activities

Our discontinued natural gas marketing segment was exposed to risks associated with changes in the market price of natural gas through the purchase, sale and delivery of natural gas to its customers at competitive prices. Through December 31, 2016, we managed our exposure to such risks through a combination of physical storage and financial instruments, including

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

futures, over-the-counter and exchange-traded options and swap contracts with counterparties. Effective January 1, 2017, as a result of the sale of AEM, these activities were discontinued.

Due to the sale of AEM, we determined that the cash flows associated with our natural gas marketing commodity cash flow hedges were no longer probable of occurring; therefore, we discontinued hedge accounting as of December 31, 2016. As a result, we reclassified the gain in accumulated other comprehensive income associated with the commodity contracts into earnings as a reduction of purchased gas cost and recognized a pre-tax gain of \$10.6 million, which is included in income from discontinued operations on the consolidated statement of income for the year ended September 30, 2017.

The Company's other risk management activities are discussed in Note 13.

Impact of Financial Instruments on the Income Statement

Hedge ineffectiveness for our natural gas marketing segment was recorded as a component of purchased gas cost, which is included in discontinued operations on the consolidated statements of income, and primarily results from differences in the location and timing of the derivative instrument and the hedged item. For the years ended September 30, 2017 and 2016, we recognized a gain arising from fair value and cash flow hedge ineffectiveness of \$3.4 million and \$21.6 million. Additional information regarding ineffectiveness recognized in the income statement is included in the tables below.

Fair Value Hedges

The impact of our natural gas marketing segment commodity contracts designated as fair value hedges and the related hedged item on the results of discontinued operations on our consolidated income statement for the years ended September 30, 2017 and 2016 is presented below.

| | Year Ended September 30 | |
|--|-------------------------|------------------|
| | 2017 | 2016 |
| | (In thousands) | |
| Commodity contracts | \$ (9,567) | \$ 3,516 |
| Fair value adjustment for natural gas inventory designated as the hedged item | 12,858 | 18,079 |
| Total decrease in purchased gas cost reflected in income from discontinued operations | <u>\$ 3,291</u> | <u>\$ 21,595</u> |
| The decrease in purchased gas cost reflected in income from discontinued operations is comprised of the following: | | |
| Basis ineffectiveness | \$ (597) | \$ (1,390) |
| Timing ineffectiveness | 3,888 | 22,985 |
| | <u>\$ 3,291</u> | <u>\$ 21,595</u> |

Basis ineffectiveness arises from natural gas market price differences between the locations of the hedged inventory and the delivery location specified in the hedge instruments. Timing ineffectiveness arises due to changes in the difference between the spot price and the futures price, as well as the difference between the timing of the settlement of the futures and the valuation of the underlying physical commodity. As the commodity contract nears the settlement date, spot-to-forward price differences should converge, which should reduce or eliminate the impact of this ineffectiveness on purchased gas cost.

Cash Flow Hedges

The impact of our natural gas marketing segment cash flow hedges on our consolidated income statements for the years ended September 30, 2017 and 2016 is presented below. Note that this presentation does not reflect the financial impact arising from the hedged physical transactions. Therefore, this presentation is not indicative of the economic margin we realized when the underlying physical and financial transactions were settled.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

| | Year Ended September 30 | |
|---|-------------------------|--------------------|
| | 2017 | 2016 |
| | (In thousands) | |
| Loss reclassified from AOCI for effective portion of natural gas marketing commodity contracts | \$ (2,612) | \$ (52,651) |
| Gain (loss) arising from ineffective portion of natural gas marketing commodity contracts | 111 | (19) |
| Gain on discontinuance of cash flow hedging of natural gas marketing commodity contracts reclassified from AOCI | 10,579 | — |
| Total impact on purchased gas cost reflected in income from discontinued operations | <u>\$ 8,078</u> | <u>\$ (52,670)</u> |

Financial Instruments Not Designated as Hedges

The impact of financial instruments that have not been designated as hedges on our consolidated income statements for the years ended September 30, 2017 and 2016 was an increase (decrease) in purchased gas cost reflected in income from discontinued operations of \$(6.8) million and \$15.5 million, which is included in discontinued operations on the consolidated statements of income. Note that this presentation does not reflect the expected gains or losses arising from the underlying physical transactions associated with these financial instruments. Therefore, this presentation is not indicative of the economic margin we realized when the underlying physical and financial transactions were settled.

16. Concentration of Credit Risk

Credit risk is the risk of financial loss to us if a customer fails to perform its contractual obligations. We engage in transactions for the purchase and sale of products and services with major companies in the energy industry and with industrial, commercial, residential and municipal energy consumers. These transactions principally occur in the southern and midwestern regions of the United States. We believe that this geographic concentration does not contribute significantly to our overall exposure to credit risk. Credit risk associated with trade accounts receivable for the distribution segment is mitigated by the large number of individual customers and the diversity in our customer base. The credit risk for our other segment is not significant.

17. Selected Quarterly Financial Data (Unaudited)

Summarized unaudited quarterly financial data is presented below. The sum of net income per share by quarter may not equal the net income per share for the fiscal year due to variations in the weighted average shares outstanding used in computing such amounts. Our businesses are seasonal due to weather conditions in our service areas. For further information on its effects on quarterly results, see the “Results of Operations” discussion included in the “Management’s Discussion and Analysis of Financial Condition and Results of Operations” section herein.

ITEM 9. Changes in and Disagreements With Accountants on Accounting and Financial Disclosure.

None.

ITEM 9A. Controls and Procedures.**Management's Evaluation of Disclosure Controls and Procedures**

We carried out an evaluation, under the supervision and with the participation of our management, including our principal executive officer and principal financial officer, of the effectiveness of the Company's disclosure controls and procedures, as such term is defined in Rule 13a-15(e) under the Securities Exchange Act of 1934, as amended (Exchange Act). Based on this evaluation, the Company's principal executive officer and principal financial officer have concluded that the Company's disclosure controls and procedures were effective as of September 30, 2018 to provide reasonable assurance that information required to be disclosed by us, including our consolidated entities, in the reports that we file or submit under the Exchange Act is recorded, processed, summarized, and reported within the time periods specified by the SEC's rules and forms, including a reasonable level of assurance that such information is accumulated and communicated to our management, including our principal executive and principal financial officers, as appropriate to allow timely decisions regarding required disclosure.

Management's Report on Internal Control over Financial Reporting

Our management is responsible for establishing and maintaining adequate internal control over financial reporting, as such term is defined in Exchange Act Rule 13a-15(f), in providing reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. Under the supervision and with the participation of our management, including our principal executive officer and principal financial officer, we evaluated the effectiveness of our internal control over financial reporting based on the framework in *Internal Control-Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission (2013 framework) (COSO). Based on our evaluation under the framework in *Internal Control-Integrated Framework* issued by COSO and applicable Securities and Exchange Commission rules, our management concluded that our internal control over financial reporting was effective as of September 30, 2018, in providing reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles.

Ernst & Young LLP has issued its report on the effectiveness of the Company's internal control over financial reporting. That report appears below.

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

To the Shareholders and the Board of Directors of Atmos Energy Corporation

Opinion on Internal Control over Financial Reporting

We have audited Atmos Energy Corporation's internal control over financial reporting as of September 30, 2018, based on criteria established in Internal Control - Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (2013 framework) (the COSO criteria). In our opinion, Atmos Energy Corporation (the Company) maintained, in all material respects, effective internal control over financial reporting as of September 30, 2018, based on the COSO criteria.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States) (PCAOB), the 2018 consolidated financial statements of the Company and our report dated November 13, 2018 expressed an unqualified opinion thereon.

Basis for Opinion

The Company's management is responsible for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting included in the accompanying Management's Report on Internal Control over Financial Reporting. Our responsibility is to express an opinion on the Company's internal control over financial reporting based on our audit. We are a public accounting firm registered with the PCAOB and are required to be independent with respect to the Company in accordance with the U.S. federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission and the PCAOB.

We conducted our audit in accordance with the standards of the PCAOB. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects.

Our audit included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, testing and evaluating the design and operating effectiveness of internal control based on the assessed risk, and performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

Definition and Limitations of Internal Control Over Financial Reporting

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

Changes in Internal Control over Financial Reporting

We did not make any changes in our internal control over financial reporting (as defined in Rule 13a-15(f) and 15d-15(f) under the Act) during the fourth quarter of the fiscal year ended September 30, 2018 that have materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.

ITEM 9B. *Other Information.*

Not applicable.

PART III

ITEM 10. *Directors, Executive Officers and Corporate Governance.*

Information regarding directors and compliance with Section 16(a) of the Securities Exchange Act of 1934 is incorporated herein by reference to the Company’s Definitive Proxy Statement for the Annual Meeting of Shareholders on February 6, 2019. Information regarding executive officers is reported below:

EXECUTIVE OFFICERS OF THE REGISTRANT

The following table sets forth certain information as of September 30, 2018, regarding the executive officers of the Company. It is followed by a brief description of the business experience of each executive officer.

| <u>Name</u> | <u>Age</u> | <u>Years of Service</u> | <u>Office Currently Held</u> |
|-------------------------|------------|-------------------------|--|
| Kim R. Cocklin | 67 | 12 | Executive Chairman of the Board |
| Michael E. Haefner | 58 | 10 | President, Chief Executive Officer and Director |
| Christopher T. Forsythe | 47 | 15 | Senior Vice President and Chief Financial Officer |
| David J. Park | 47 | 14 | Senior Vice President, Utility Operations |
| John K. Akers | 55 | 27 | Senior Vice President, Safety and Enterprise Services |
| Karen E. Hartsfield | 48 | 3 | Senior Vice President, General Counsel and Corporate Secretary |
| John M. Robbins | 48 | 5 | Senior Vice President, Human Resources |

Kim R. Cocklin was named Executive Chairman of the Board on October 1, 2017. From October 1, 2010 through September 30, 2015, Mr. Cocklin served the Company as President and Chief Executive Officer and from October 1, 2015 through September 30, 2017, as Chief Executive Officer. Mr. Cocklin joined the Company in June 2006 and served as President and Chief Operating Officer of the Company from October 1, 2008 through September 30, 2010, after having served as Senior Vice President, Regulated Operations from October 2006 through September 2008. Mr. Cocklin was appointed to the Board of Directors on November 10, 2009.

Michael E. Haefner was named President and Chief Executive Officer, effective October 1, 2017. Mr. Haefner joined the Company in June 2008 as Senior Vice President, Human Resources. On January 19, 2015, Mr. Haefner was promoted to Executive Vice President and assumed oversight responsibility for Atmos Pipeline - Texas, Atmos Energy Holdings, Inc. and the gas supply and services function. On October 1, 2015, Mr. Haefner was promoted to the role of President and Chief Operating Officer in which he also assumed oversight responsibility for the operations of our six utility divisions and customer service. Mr. Haefner was appointed to the Board of Directors on November 4, 2015.

Christopher T. Forsythe was named Senior Vice President and Chief Financial Officer effective February 1, 2017. Mr. Forsythe joined the Company in June 2003 and prior to his promotion, served as the Company's Vice President and Controller from May 2009 through January 2017.

David J. Park was named Senior Vice President of Utility Operations, effective January 1, 2017. In this role, Mr. Park is responsible for the operations of Atmos Energy’s six utility divisions as well as gas supply. Prior to this promotion, Mr. Park served as the President of the West Texas Division from July 2012 to December 2016. Mr. Park also served as Vice President of Rates and Regulatory Affairs in the Mid-Tex Division and previously held positions in Engineering and Public Affairs. Prior to joining Atmos Energy in 2004, Mr. Park had 10 years of experience in the industry.

John K. (Kevin) Akers was named Senior Vice President, Safety and Enterprise Services, effective January 1, 2017. In this role, Mr. Akers is responsible for customer service, facilities management, safety and supply chain management. Mr. Akers joined the company in 1991. Mr. Akers assumed increased responsibilities over time and was named President of the Mississippi Division in 2002. He was later named President of the Kentucky/Mid-States Division in May 2007, a position he held until December 2016.

Karen E. Hartsfield was named Senior Vice President, General Counsel and Corporate Secretary of Atmos Energy, effective August 7, 2017. Ms. Hartsfield joined the Company in June 2015, after having served in private practice for 19 years, most recently as Managing Partner of Jackson Lewis LLP in its Dallas office from July 2013 to June 2015. Prior to joining Jackson Lewis as a partner in January 2009, Ms. Hartsfield was a partner with Baker Botts LLP in Dallas.

John M. (Matt) Robbins was named Senior Vice President, Human Resources, effective January 1, 2017. Mr. Robbins joined the Company in May 2013 and prior to this promotion served as Vice President, Human Resources from February 2015 to December 2016. Before joining Atmos Energy, Matt had over 20 years of experience in human resources.

Identification of the members of the Audit Committee of the Board of Directors as well as the Board of Directors' determination as to whether one or more audit committee financial experts are serving on the Audit Committee of the Board of Directors is incorporated herein by reference to the Company's Definitive Proxy Statement for the Annual Meeting of Shareholders on February 6, 2019.

The Company has adopted a code of ethics for its principal executive officer, principal financial officer and principal accounting officer. Such code of ethics is represented by the Company's Code of Conduct, which is applicable to all directors, officers and employees of the Company, including the Company's principal executive officer, principal financial officer and principal accounting officer. A copy of the Company's Code of Conduct is posted on the Company's website at www.atmosenergy.com under "Corporate Responsibility." In addition, any amendment to or waiver granted from a provision of the Company's Code of Conduct will be posted on the Company's website under "Corporate Responsibility."

ITEM 11. *Executive Compensation.*

Information on executive compensation is incorporated herein by reference to the Company's Definitive Proxy Statement for the Annual Meeting of Shareholders on February 6, 2019.

ITEM 12. *Security Ownership of Certain Beneficial Owners and Management and Related Stockholder Matters.*

Security ownership of certain beneficial owners and of management is incorporated herein by reference to the Company's Definitive Proxy Statement for the Annual Meeting of Shareholders on February 6, 2019. Information concerning our equity compensation plans is provided in Part II, Item 5, "Market for Registrant's Common Equity, Related Stockholder Matters and Issuer Purchases of Equity Securities", of this Annual Report on Form 10-K.

ITEM 13. *Certain Relationships and Related Transactions, and Director Independence.*

Information on certain relationships and related transactions as well as director independence is incorporated herein by reference to the Company's Definitive Proxy Statement for the Annual Meeting of Shareholders on February 6, 2019.

ITEM 14. *Principal Accountant Fees and Services.*

Information on our principal accountant's fees and services is incorporated herein by reference to the Company's Definitive Proxy Statement for the Annual Meeting of Shareholders on February 6, 2019.

PART IV

ITEM 15. *Exhibits and Financial Statement Schedules.*

- (a) 1. and 2. *Financial statements and financial statement schedules.*

The financial statements and financial statement schedule listed in the Index to Financial Statements in Item 8 are filed as part of this Form 10-K.

RRA Regulatory Focus

Adjustment Clauses

A state-by-state overview

In the face of the robust expansion of utility capital expenditures over the past 10-plus years, increases in various expenses, and sluggish demand growth in most parts of the U.S., industry stakeholders have developed evermore innovative strategies to achieve timely rate recognition. As shown in the image below, CapEx for the companies in the RRA universe is estimated to exceed \$130 billion for the full year 2018, more than twice the amount spent in 2007.

52-co. universe actual and estimated capital expenditures (\$B)

As of April 13, 2018
Source: S&P Global Market Intelligence

A key component of these strategies has been the implementation of adjustment clauses to address recovery of these expenditures as well as issues related to rising/volatile costs and lackluster sales growth. These mechanisms have contributed to steady earnings growth in the sector. [Earnings](#) for the 12 months ended June 30, 2018, showed solid growth for utilities, with an average gain of more than 6% over prior-year results. Cold weather for much of the nation in the first quarter of 2018, coupled with extreme heat in May and June, contributed to earnings growth for many utilities, with a variety of other factors, including rate increases and lower expenses, also benefiting earnings. The S&P Global Market Intelligence consensus adjusted EPS projections call for 7.6% growth in 2018 for the companies in the RRA utility universe, with 4.7% and 5.5% expansion forecast for 2019 and 2020, respectively.

A defining characteristic of an adjustment clause is that it effectively shifts the risk associated with recovery of the expense in question from shareholders to customers, because if the clause operates as designed, the company is able to change its rates to recover its costs on a current basis, without any negative effect on the bottom line and without the expense and delay that accompany a rate case filing.

The electric and natural gas utilities' use of adjustment clauses to recover variations in certain costs outside of the traditional rate case process has its origins in the 1973 Arab oil embargo, when fuel costs skyrocketed, leaving the utilities with no way to recover the increased costs in a timely manner. At that time, the only remedy for the utilities was to file a rate case; however, rate proceedings frequently took more than a year to litigate, while fuel prices climbed more rapidly than the utilities could obtain rate recognition of the increased costs. Certain jurisdictions permitted the utilities to have more than one rate case pending simultaneously though most did not.

During these years, utility earnings were under considerable pressure, a situation that prompted some jurisdictions to establish a more constructive framework to allow more timely recovery of cost increases that were beyond the control of the utilities.

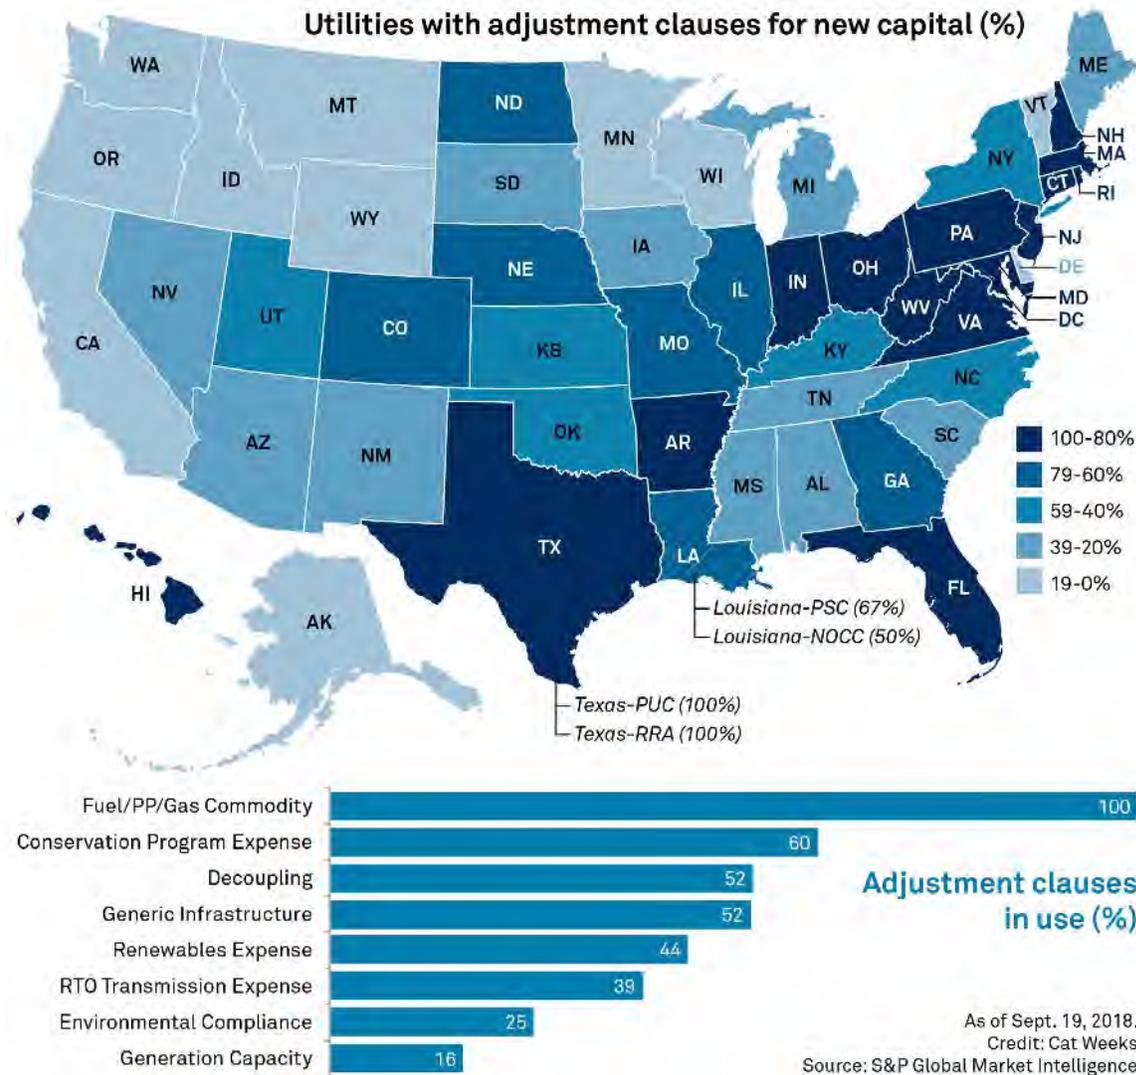

The result was the creation of the fuel adjustment clause, or FAC, essentially a single-issue ratemaking process whereby a utility is permitted to implement periodic rate adjustments to reflect changes in its cost of fuel. The utility is generally authorized to defer incremental variations in its fuel costs to offset any effect on earnings from the variation in the cost. The deferred amount is then recovered from, or refunded to, ratepayers in the next FAC rate adjustment. In some circumstances, the FAC includes a forward-looking component that is subject to true-up provisions. In addition to fuel costs, most jurisdictions allow the utilities' purchased power expense to be included in the FAC.

Over the ensuing years, the use of adjustment clauses has expanded greatly. Adjustment clauses are generally reserved for expenses that are outside the control of the utility or are required by law or rule. Some jurisdictions have approved the use of adjustment clauses for recovery of environmental compliance, energy efficiency, or EE, and conservation program expenses, transmission charges allocated to the utility by the Federal Energy Regulatory Commission and/or expenses related to meeting renewable resource requirements. Such mechanisms have also been approved to pass through to customers all or a portion of the margins that the company receives from selling excess power or pipeline capacity in the open market through off-system sales.

Another type of adjustment clause, a decoupling mechanism, enables utilities to offset the effect on revenues of fluctuations in sales caused by customer participation in energy efficiency programs, deviations from "normal" temperature patterns, or economic conditions. Regulatory Research Associates, an offering of S&P Global Market Intelligence, considers a decoupling mechanism that adjusts for all three of these factors to be a "full" decoupling mechanism and designates those that address only one or two of these factors as "partial" decoupling mechanisms. RRA also assigns a partial decoupling tag to those mechanisms that include rate caps or other limitations.

More recently and with greater frequency, commissions have approved mechanisms that permit the costs associated with the construction of new generation capacity or delivery infrastructure to be reflected in rates, effectively including these items in rate base without a full rate case. In some instances, these mechanisms may even provide the utilities a cash return on construction work in progress. As shown in the top image on the next page, these types of mechanisms are more common in the Eastern U.S. and less so in the West.

As shown in the bottom image on the next page, certain types of adjustment clauses are more prevalent than others. For example, those that address electric fuel and gas commodity charges are in place in all jurisdictions. Also, nearly two-thirds of all utilities have riders in place to recover costs related to energy efficiency programs, and roughly half of the utilities utilize some type of decoupling mechanism.

This report covers the key adjustment clauses used by the largest electric and gas utilities in the 53 jurisdictions covered by RRA. This report does not address surcharges that have been approved to enable the utility to recover specific one-time items, e.g., excess storm-restoration costs incurred in a given year, because under that scenario, the utility is recovering, over a defined period of time, a fixed amount that has already been incurred.

This report also does not include expense trackers, which provide for the deferral of variations in certain costs for potential recovery at a future time when the commission will consider the net accumulated balance for inclusion in rates. Although an expense tracker is designed to keep the utility's earnings whole, rates and cash flows do not change on a current basis. Expense trackers are sometimes authorized to account for variations in pension-related costs. Although there are similarities between each of these types of ratemaking provisions, only adjustment clauses allow rates to change on an expedited basis in accordance with cost changes.

The accompanying table includes footnotes (denoted by “✓*” or “--*”), beginning on page 5, only where a clarification regarding the specific adjustment clause is necessary. Further details concerning the adjustment clauses included in this report can be found in each of RRA’s [Commission Profiles](#).

✓ Adjustment clause exists for the company/state/operation.

* See text for further information.

As of Sept. 27, 2018.

FOOTNOTES

Alabama

Electric fuel/gas commodity/purchased power — The certificated new plant, or Rate CNP, adjustment clause for Alabama Power provides for recovery of costs, excluding fuel, associated with certified purchased power agreements. Adjustments under the clause are subject to a staff and PSC review process that includes public hearings. Spire Alabama and Spire Gulf utilize a competitive fuel clause that allows the companies to immediately adjust prices to compete with any alternate fuel or gas supply source, with no loss of earnings margin.

Decoupling — Spire Alabama and Spire Gulf use weather normalization clauses.

Environmental compliance/generation capacity — The Rate CNP adjustment clause used by Alabama Power provides for recovery of costs related to: the commercial operation of certified generating facilities, certified purchased power agreements, and environmental mandates. Recoverable environmental costs include: applicable operation and maintenance expenses, depreciation and a return on capital beginning with 2005 investments, and a true-up of prior-period over/under-recovered amounts. Such costs are generally subject to PSC review, but not to a full evidentiary hearing.

Other — The tariffs of the major energy utilities include adjustment provisions to reflect changes in income taxes and certain general and local taxes.

Arizona

Decoupling — A partial decoupling mechanism, called the delivery charge adjustment, is in place for Southwest Gas. The mechanism excludes the effects of weather.

Arizona Public Service, or APS, utilizes a lost fixed cost recovery, or LFCR, mechanism designed to make the company whole for contributions to fixed-cost recovery that are lost due to customer participation in energy efficiency and distributed energy, such as rooftop solar, programs. The LFCR is capped at 1% of annual revenues, with any excess being deferred with interest to be recovered through a future annual adjustment.

UNS Gas is subject to an incentive-based LFCR plan that allows the company to attain greater amounts of fixed-cost recovery as it meets its commission-defined energy efficiency goals. Residential customers are permitted to opt out of the LFCR provisions if they agree to a rate structure that incorporates a higher basic service fixed monthly charge. The LFCR is capped at 1% of annual revenues, with any excess being deferred with interest to be recovered through a future annual adjustment.

Tucson Electric Power, or TEP, operates under an LFCR mechanism designed to mitigate the revenue impact of lost sales associated with the ACC's energy efficiency standards and the distributed generation requirements under the commission's renewable energy standards. The annual adjustments are to be capped at 2% of retail revenues, with any excess to be deferred for future recovery. The LFCR mechanism also includes a provision through which TEP recovers lost revenues associated with "reliability must-run generation."

UNS Electric also utilizes an LFCR mechanism under which the company is permitted to implement annual rate adjustments related to any shortfall in recovery of fixed costs due to energy efficiency and distributed generation. The LFCR is not intended to recover fixed costs due to other factors, such as weather or general economic conditions and, as such, is not considered a full decoupling mechanism. The annual adjustments are to be capped at 1%, with any amount in excess of 1% to be deferred for future recovery.

Generic infrastructure — A surcharge is in place for Southwest Gas that pertains to a distribution pipeline replacement program associated with pre-1970 vintage steel pipes. Southwest Gas also has a mechanism in place that provides for the recovery of costs associated with programs through which the company replaces certain assets located on customers' properties with assets that are owned and operated by the utility.

Other — All utilities recover franchise fees on a current basis through an adjustable line item on the monthly bill. An economic development rider for certain large-use customers is in place for TEP and UNS Electric.

Arkansas

Electric fuel/gas commodity/purchased power — Oklahoma Gas and Electric's, or OG&E's, energy cost recovery rider provides for the flow-through to ratepayers of 100% of the Arkansas jurisdictional proceeds from the sale of excess SO₂ emission allowances as well as a share of the value of "green credits" resulting from the monetized environmental benefits of generation at the company's Centennial Wind Farm equal to the portion of the project dedicated to serving the Arkansas jurisdiction.

Decoupling — A generic framework, effectively a partial decoupling mechanism, is in place that provides for the electric and gas utilities to recover the lost contribution to fixed costs associated with energy efficiency, or EE,-related usage reductions and to retain a portion of the net benefits related to the EE programs. The gas utilities have been using full decoupling mechanisms for several years.

Generation capacity — Entergy Arkansas, or EA, utilizes a capacity acquisition rider to recover costs associated with its investment in certain generation facilities and a capacity cost recovery rider to flow through the net costs related to the company's purchases of capacity to serve retail customers.

Generic infrastructure — EA uses a rider to recover costs associated with certain government-mandated investments. A gas main replacement program is in place for CenterPoint Energy Resources, or CER, Black Hills Energy Arkansas, or BHEA, and Arkansas Oklahoma Gas, or AOG, under which the companies are authorized to recover the cost of replacing cast-iron and bare-steel gas mains and associated services through a mechanism. BHEA and CER also have an at-risk meter relocation program rider in place to permit timely recovery of the costs associated with moving meters from customers' property lines to the structures being served.

Other — EA uses a storm recovery charges rider to collect from ratepayers the amounts required to service its related securitization bonds. OG&E uses a "smart grid" rider. AOG, CER, EA, OG&E, BHEA and Southwestern Electric Power have mechanisms in place to recover variations in certain taxes and franchise fees.

Colorado

Decoupling — An adjustment clause is in place for Public Service Company of Colorado's, or PSCO's, gas operations that provides for recovery of lost revenues associated with customer participation in demand-side management programs.

For PSCO's electric operations, the PUC approved a pilot partial decoupling mechanism for the company's residential and small commercial customers in July 2017. However, the mechanism is not yet in place. Annual adjustments under the mechanism are to be capped at 3% of class revenues.

Environmental compliance — A rider is in place for PSCO that provides for a cash return on construction work in progress, or CWIP, and addresses costs associated with the installation of environmental controls at the coal-fired Pawnee and Hayden facilities.

Generation capacity — Black Hills Colorado Electric Utility, or BHCE, has a Clean Air Clean Jobs Act, or CACJA, rider in place that reflects the company's investment in the gas-fired LM6000 plant at the Pueblo Generating Station. The rider was not rolled into base rates in the company's last rate case and is accorded a lower return on equity than that established for BHCE's other Colorado jurisdictional operations. The rider is to remain in place until BHCE's next rate

case. A CACJA rider is in place for PSCO that reflects the company's investment in the Cherokee natural gas combined-cycle plants and certain environmental controls at other facilities.

Generic infrastructure — PSCO and BHCE are permitted to recover through a transmission cost adjustment, or TCA, clause, prudent costs incurred in planning, developing and completing construction or expansion of transmission facilities for which the PUC has granted a certificate of public convenience and necessity or has otherwise determined to be necessary. Through the TCA, the utilities may earn a cash return on CWIP for investments in grid reliability or new or upgraded transmission facilities. The TCAs are updated annually.

PSCO operates under a pipeline system integrity adjustment mechanism for its gas operations, through which the company recovers the costs associated with reliability improvements and compliance with certain federal safety regulations. The mechanism is to remain in place through 2018.

Other — PSCO utilizes an adjustment clause for steam service, under which it recovers the difference between its actual cost of fuel and the costs recovered in base rates.

PSCO shares with customers margins from generation-based short-term energy trading and proprietary trading through its fuel and purchased power adjustment mechanism. BHCE uses an off-system sales margin-sharing mechanism as a component of its fuel cost/purchased power expense cost adjustment mechanism.

Connecticut

Electric fuel/gas commodity/purchased power — Connecticut Light and Power, or CL&P, and United Illuminating, or UI, no longer own generation, and both are permitted to recover, on a current basis, their full costs of providing generation service to those customers who do not choose an alternative supplier. These costs are flowed through to ratepayers outside of a rate case.

Decoupling — State law mandates the adoption of decoupling mechanisms for electric and gas utilities. UI, CL&P, Connecticut Natural Gas, or CNG, and Southern Connecticut Gas, or SCG, currently have decoupling mechanisms in place.

Generic infrastructure — A system expansion reconciliation mechanism is in place that permits the gas utilities to reconcile gas-expansion-related revenue annually between rate cases. CNG and SCG also utilize a distribution integrity management program mechanism that allows for recovery, between rate cases, of the costs associated with main replacement activity. A new capital tracker became effective July 1, 2018, for CL&P for capital additions for system resiliency and grid modernization.

Delaware

Electric fuel/gas commodity/purchased power — In conjunction with the implementation of retail competition, Delmarva Power and Light's electric fuel adjustment was largely eliminated. Power to meet standard offer service needs is now procured competitively and reflected in rates on a current basis.

Generic infrastructure — Recently enacted legislation allows electric and natural gas utilities to implement a distribution system improvement charge. Similar to the surcharge used by water utilities that operate in the state, electric and natural gas utilities will be allowed to add a surcharge to customer bills for replacement capital improvements made to the distribution system between rate cases. Currently, no energy utility has requested to implement the surcharge.

Other — Chesapeake Utilities has a mechanism in place to recover variations in certain taxes and fees.

District of Columbia

Electric fuel/gas commodity/purchased power — Fuel and purchased power adjustment clauses are permitted by law. However, with the onset of electric retail competition, Potomac Electric Power Co., or Pepco, divested most of its generation assets, and those that were not divested have since been retired. Pepco purchases the power to meet its standard offer service, or SOS, requirements via a competitive bidding process, and prices paid by SOS customers reflect the weighted average of the winning bids. SOS prices are adjusted on a current basis.

Decoupling — A bill stabilization adjustment mechanism, applied monthly, is in place for Pepco that is designed to mitigate the volatility of revenues and customer bills caused by abnormal weather and customer participation in energy efficiency programs.

Renewables expense — Pepco's rates include a charge to fund the Sustainable Energy Trust Fund; amounts collected are remitted to the third-party Sustainable Energy Utility.

Generic infrastructure — State law provides for the district to issue bonds, finance or securitize a portion of the costs associated with a plan under which Pepco is to relocate certain above-ground distribution facilities below ground. In addition, the bill authorizes the PSC to approve a mechanism to achieve rate recognition of the unsecuritized portion of the project. The PSC has approved the undergrounding program, known as the DC PLUG initiative, and established a rider for rate recognition of the investment. The commission order was appealed to the D.C. Court of Appeals.

The PSC has approved a \$1 billion, 40-year accelerated pipeline replacement program for Washington Gas Light, or WGL, and a mechanism related to the first five years of the program.

Other — Part of WGL's purchased gas charge provides for recovery of uncollectible expenses related to gas commodity charges. WGL is also permitted to recover carrying costs on storage balances and over/under-collected gas costs through separate charges. Pepco and WGL have a mechanism in place to recover variations in certain taxes and fees.

Florida

Generation capacity — Electric utilities are permitted to recover all prudently incurred site-selection and preconstruction costs, including carrying charges, for nuclear and integrated gasification combined-cycle, or IGCC, power plants through the capacity cost recovery clause, or CCRC. A cash return on construction work in progress for nuclear plant construction and updates and IGCC construction is also reflected in the CCRC.

Duke Energy Florida, or DEF, is permitted to increase base rates without a general rate case through a generation base rate adjustment, or GBRA, related to up to 1,800 MW of additional new generation in 2018. Adjustments under the GBRA are to reflect a 10.5% return on equity and the most recent capital structure from the company's periodic surveillance reports that are filed with the PSC. Tampa Electric is also permitted to implement a rate increase through a GBRA.

Generic infrastructure — Peoples Gas System utilizes a rider to recover the costs associated with accelerating the replacement of cast-iron and bare-steel distribution pipes on its system. The smaller gas utilities, Florida Public Utilities, the Florida division of Chesapeake Utilities and Pivotal Utility Holdings, use similar riders.

Other — Certain fees and taxes, such as franchise fees and gross receipts taxes, are recovered through a line item on customer bills, with the charge adjusted based on customer usage. The fuel and purchased power cost recovery clause reflects gains from economy energy sales.

Georgia

Electric fuel/gas commodity/purchased power — As a result of the restructuring of the natural gas industry in Georgia, Atlanta Gas Light, or ATGL, no longer procures gas for its customers and, thus, is no longer subject to the purchased gas adjustment mechanism, or PGAM. The much smaller Liberty Utilities (Peach State Natural Gas), which is still regulated under a non-restructured framework, utilizes a non-automatic PGAM.

Decoupling — Liberty Utilities (Peach State Natural Gas) is subject to the Georgia Rate Adjustment Mechanism, or GRAM, an alternative regulatory framework. The GRAM provides for a “revenue true-up,” under which the company is to compare actual revenues to the previous revenue projection. ATGL operates under a straight fixed-variable rate design.

Environmental compliance — ATGL is authorized to recover cleanup costs related to former manufactured gas plant sites through an environmental response cost recovery rider, or ERCRR. Costs that are recoverable under the ERCRR include investigation, testing, remediation and/or litigation costs or other liabilities.

Generation capacity — A nuclear construction cost recovery, or NCCR, tariff is in place for Georgia Power, or GP. The NCCR tariff enables GP to earn a cash return on construction work in progress related to the Plant Vogtle Units 3 and 4 nuclear units. The NCCR tariff is to be revised annually.

Generic infrastructure — The PSC approved a Strategic Infrastructure Development and Enhancement, or STRIDE, program for ATGL in 2009, specifying infrastructure investments for the next 10 years. Every three years, ATGL is required to file its proposed program for the next three years for PSC review and approval. The incremental costs associated with the program’s investment are included in base rates each Oct. 1.

Hawaii

Generation capacity/generic infrastructure — As part of their alternative regulation frameworks, Hawaiian Electric Company, Hawaii Electric Light Company and Maui Electric Company are permitted to recognize, between rate cases, rate base additions and increases in operations and maintenance expenses as well as certain depreciation and amortization expenses.

Other — An integrated resource planning, or IRP, cost recovery charge is in place for the state’s utilities to facilitate recovery of the planning costs associated with the IRP process. A public benefit fund charge is in place for the large electric utilities. The charge addresses costs related to energy efficiency programs managed by a third party administrator.

Idaho

Electric fuel/gas commodity/purchased power — Avista Corp.’s power cost adjustment enables the company to defer, in a balancing account, for subsequent recovery/refund to customers, 90% of the difference between actual net power costs and the amount included in retail rates. Idaho Power, or IP, has a similar mechanism in place with a sharing provision under which annual rate adjustments reflect 95% of the cost variations associated with water supply for hydroelectric production, wholesale energy prices and retail load changes. An energy cost adjustment mechanism is in place for PacifiCorp that allows for the recovery of 90% of the difference between actual power costs and those included in rates.

Decoupling — IP operates under a revenue decoupling mechanism, referred to as a fixed cost adjustment, or FCA, which is designed to adjust the company’s electric rates to recover fixed costs independent of the volume of energy sales. In 2015, the FCA was modified to replace weather-normalized sales with actual sales in the calculation of the FCA. There is a 3% cap on annual rate increases that may be implemented under the mechanism. Unrecovered balances are to be carried forward to future years, with interest.

Avista Corp. is to operate under an electric and gas revenue decoupling mechanism, referred to as an FCA, for an initial three-year term, from Jan. 1, 2016, through Dec. 31, 2018. The mechanism may be extended following a review by the parties following the end of the third year. There is a 3% annual cap on rate increases that may be implemented under the mechanism. Unrecovered balances are to be carried forward to future years, with interest.

Illinois

Electric fuel/gas commodity/purchased power — Historically, the large electric utilities, namely Ameren Illinois, or AI, and Commonwealth Edison, or ComEd, were permitted to recover fuel costs and the energy component of purchased power costs through a monthly automatic fuel adjustment clause, or FAC. Their FACs were discontinued in conjunction with the implementation of electric industry restructuring. The power to meet the utilities' standard offer service, or SOS, obligations is now procured competitively. SOS costs and revenues are subject to an annual true-up mechanism. MidAmerican Energy continues to use an FAC, as the company was not subject to all the provisions of the restructuring law and continues to own generation plants to serve its customers.

Environmental compliance — AI uses a hazardous materials adjustment clause rider, largely to address asbestos-related litigation and remediation costs. AI, ComEd, Peoples Gas Light and Coke, or Peoples, North Shore Gas, or North Shore, and Northern Illinois Gas, or NI-Gas, use riders to recover costs related to the investigation and cleanup of manufactured gas plants.

Generic infrastructure — ComEd, North Shore and NI-Gas have riders in place to recover certain costs associated with maintaining infrastructure in accordance with requirements imposed by local governments. In accordance with state law, the ICC is permitted to approve adjustment clauses for the local gas distribution companies to recover the costs associated with their infrastructure replacement programs, and the ICC has done so for Peoples, NI-Gas and AI.

Other — As permitted by state statutes, AI, ComEd, NI-Gas, Peoples, North Shore and MidAmerican Energy utilize riders to facilitate recovery of variations in bad-debt costs. AI, ComEd, MidAmerican Energy, Peoples, North Shore and NI-Gas have mechanisms in place to recover variations in certain taxes and franchise fees.

Indiana

Decoupling — Indianapolis Power and Light's, or IP&L's, Indiana Michigan Power's, or IMP's, Duke Energy Indiana's, or DEI's, Northern Indiana Public Service Company's, or NIPSCO's, and Southern Indiana Gas and Electric's, or SIGECO's, electric energy efficiency riders provide for recovery of net lost revenues and shared savings, subject to commission approval. However, IP&L is permitted to defer lost revenues and NIPSCO's mechanism does not include savings sharing.

Environmental compliance — State law allows the URC to authorize electric utilities to recover, through a rate adjustment mechanism, 80% of the costs associated with certain federally mandated emissions-control and transmission/distribution reliability projects. The remaining 20% of such costs are to be deferred for future recovery. Environmental cost recovery riders are in place for DEI, NIPSCO, IP&L and IMP. Through these riders, the utilities are permitted to recover the related operations and maintenance costs and depreciation expenses after the environmental facilities become operational as well as a return on the related investment. These riders also provide for recovery of the net costs associated with the purchase of emission allowance credits.

Generation capacity — With respect to DEI's Edwardsport integrated gasification combined-cycle plant, the company was authorized to earn a cash return on construction work in progress associated with the plant, which commenced commercial operation in 2013, through a rider. The company now recovers the plant's operating costs through the rider.

Generic infrastructure — State law allows the URC to authorize utilities to implement a transmission, distribution and storage system improvement charge, or TDSIC, rider to facilitate recovery of the costs associated with certain electric and gas infrastructure expansion projects, including those intended to improve safety or reliability, modernize the utility's system or improve an area's economic development prospects. The URC has approved such a rider for DEI,

Indiana Gas, SIGECO's electric and gas operations and NIPSCO's electric and gas operations. IMP and NIPSCO use a rider to recover costs associated with certain government-mandated investments.

Other — DEI, IMP, IP&L, NIPSCO and SIGECO are permitted to share with ratepayers, through a rider, off-system sales margins that vary from the amount reflected in the companies' base rates. SIGECO utilizes a semiannual reliability cost and revenue adjustment that reflects: municipal wholesale margins; net emission allowance costs; interruptible sales billing credits; non-fuel purchased power costs; and ratepayers' share of the difference between actual wholesale power margins and the level of such margins included in base rates. SIGECO and IG have riders in place for a portion of the incremental changes in unaccounted-for gas costs and the gas-cost component of bad debts. NIPSCO includes these costs in its gas cost adjustment filings.

Iowa

Environmental compliance — Incremental revenues and costs associated with sales or purchases of emission allowances may be reflected in Interstate Power and Light's, or IP&L's, and MidAmerican Energy's energy adjustment clauses.

Other — Black Hills/Iowa Gas Utility, IP&L and MidAmerican Energy have mechanisms in place to recover variations in certain taxes and franchise fees.

Kansas

Conservation program expense/decoupling — State law allows electric and gas utilities to request KCC approval to implement energy efficiency-related cost-recovery mechanisms. Westar Energy and Kansas Gas and Electric, or KG&E, participate in certain energy efficiency programs and recover program-related costs and related lost revenues through the companies' energy efficiency cost-recovery riders. Weather normalization adjustment clauses are in place for Atmos Energy, Black Hills/Kansas Gas Utility, or KGU, and Kansas Gas Service, or KGS.

Generic infrastructure — Kansas City Power and Light, or KCP&L, has a rider in place to recover the costs associated with certain projects to underground transmission and distribution infrastructure. State law permits local gas distribution companies to utilize a gas system reliability surcharge, or GSRS, mechanism to recover the costs associated with gas distribution system replacement projects between base rate proceedings, subject to annual true-up. Atmos, KGS and KGU have a GSRS in place.

Other — Although not an adjustment clause per se, the KCC is statutorily authorized to permit the utilities to file "abbreviated" rate cases within 12 months of a commission rate order in the utility's most recent base rate proceeding. Such filings must incorporate all the regulatory procedures, principles and rate-of-return parameters established by the KCC in that order.

KCP&L, Westar, KG&E and Empire District Electric flow to ratepayers, through their energy cost adjustment mechanisms, off-system sales margins that vary from a base level and the net cost of emissions allowances. KCP&L, Westar, KG&E, Empire, Atmos, KGU and KGS have mechanisms in place to recover variations in certain taxes and franchise fees. KGU recovers 100% of the gas cost component of bad-debt expense through the company's purchased gas adjustment clause filings.

Kentucky

Decoupling — Weather normalization adjustment mechanisms are in place for Atmos Energy, Columbia Gas of Kentucky, or CGK, Delta Natural Gas, or Delta, and Louisville Gas and Electric's, or LG&E's, gas operations. Duke Energy Kentucky, or DEK, LG&E, Atmos, CGK and Delta utilize energy efficiency riders to facilitate recovery of costs associated with gas energy efficiency programs; these riders include certain incentive provisions and permit recovery of lost revenues related to these programs. LG&E, DEK, Kentucky Utilities, or KU, and Kentucky Power, or KP, also utilize a similar mechanism for their electric businesses.

Environmental compliance — DEK, LG&E, KU and KP are permitted to recover the costs associated with environmental-related investments, including the cost of emission allowances, and earn a cash return on the related construction work in progress through a cost-recovery mechanism.

Generic infrastructure — Atmos, CGK, LG&E, Delta and DEK utilize riders to facilitate recovery of certain costs associated with their gas distribution infrastructure replacement programs.

Other — Off-system sales, or OSS, sharing mechanisms are in place for DEK's electric operations and for KP. 100% of DEK's emission allowance sales margins flow to ratepayers through the OSS mechanism. LG&E and KU allocate a portion of their OSS margins to ratepayers through the fuel adjustment clause proceedings. Atmos, CGK, Delta, DEK, KP, LG&E and KU have mechanisms in place to recover variations in certain taxes and franchise fees.

Louisiana - NOCC

Decoupling — Entergy New Orleans, or ENO's, fuel clause includes for legacy Entergy Louisiana Algiers service territory customers only a provision that provides for the recovery of the lost contribution to fixed costs associated with customer participation in energy efficiency programs.

Environmental compliance — An environmental adjustment clause rider is in place for ENO, through which the company recovers costs associated with the purchase and use of emission allowances.

Generation capacity — A rider is in place for ENO, through which the company reflects capacity costs associated with the Ninemile 6 plant.

Other — ENO uses a storm reserve rider for both its electric and gas operations.

Louisiana PSC

Decoupling — Energy efficiency, or EE, riders are in place for the state's electric utilities through which the companies recover costs associated with administering their EE programs and the lost contribution to fixed costs associated with customer participation in the programs. CenterPoint Energy Resources, Atmos Energy divisions Louisiana Gas Service, or LGS, and TransLouisiana Gas, or TLG, and the gas operations of Entergy Louisiana utilize weather normalization adjustment mechanisms.

Environmental compliance — The state's electric utilities may use an environmental adjustment clause, or EAC, to recover from ratepayers the costs associated with the acquisition of emissions credits to comply with federal, state and local environmental standards. In addition, the utilities credit ratepayers through the EAC any revenues associated with the sale or transfer of emission allowances.

Generation capacity — A component of Entergy Louisiana's, or EL's, formula rate plan, or FRP, provides for the recovery of costs associated with new generation and capacity additions, including the Ninemile 6 facility. Cleco Power's FRP includes provisions to reflect in rates certain capacity additions.

Generic infrastructure — Cleco's FRP includes provisions to reflect in rates certain infrastructure costs. As part of their rate stabilization clauses, LGS and TLG have a mechanism in place that provides for the recovery of costs associated with system integrity management programs. An infrastructure investment recovery rider is in place for EL's gas operations. EL's FRP includes a provision that reflects transmission capital additions in rates.

RTO-related transmission expense — EL and Cleco recover certain transmission-related costs through their FRPs.

Other — Customers' share of Southwestern Electric Power Co.'s, or SWEPCO's, off-system sales margins flow through the company's fuel adjustment clause. Economic development riders are in place for EL, Cleco and SWEPCO.

Maine

Electric fuel/gas commodity/purchased power — Electric fuel adjustment clauses are no longer utilized due to the implementation of retail choice. For the most part, the state's electric utilities no longer own generation and, by law, are not allowed to provide standard offer service, or SOS. SOS providers are selected through a bidding process conducted by the PUC. The full cost of SOS is recovered from ratepayers.

Decoupling — Central Maine Power, or CMP, is subject to a full revenue decoupling mechanism, with any related annual adjustments capped at 2% of distribution revenues and any under-collections in excess of the capped to be deferred for future recovery. No cap is applied to the amount of over-collections to be returned to ratepayers.

Environmental compliance — Northern Utilities recovers manufactured gas site remediation expenses through an environmental remediation charge that is adjusted on a semiannual basis.

Generic infrastructure — In 2013, the PUC adopted a targeted infrastructure replacement adjustment, or TIRA, for Northern Utilities. The TIRA allowed for annual recovery of the company's investments in targeted operational and safety-related infrastructure replacement and upgrade projects, including the company's cast-iron replacement program. The TIRA had an initial term of four years and covered targeted capital expenditures in 2013 through 2016. In February 2018, the PUC approved an extension of the TIRA to allow for the recovery of investments in calendar years 2017 through 2024 or the year following the end of investment in eligible facilities under the company's cast-iron replacement program. Rate increases under the TIRA continue to be subject to a 4% rate cap of weather-normalized distribution revenues. However, Northern Utilities is permitted to seek PUC approval to adjust the rate cap if the cap has been exceeded two times.

Other — CMP is permitted to recover variations in storm costs versus the levels included in base rates through a rider.

Maryland

Electric fuel/gas commodity/purchased power — Historically, electric utilities were permitted to recover the fuel and energy portion of purchased power costs through the electric fuel rate, or EFR. The EFR was eliminated, coincident with the implementation of competition in the provision of electric supply. The utilities continue to provide electric supply service to customers who do not select an alternative generation supplier. The power to meet these requirements is obtained via competitive bids, and the costs are recovered from ratepayers on a current basis.

Conservation program expense — Maryland's electric and gas utilities have riders in place, which are adjusted annually, to reflect recovery of electric and gas energy efficiency and demand-side management program costs that are not included in base rates.

Decoupling — Columbia Gas of Maryland, or CGM, and Washington Gas Light, or WGL, have revenue-normalization adjustment mechanisms in place for residential customers only that address customer participation in energy efficiency/conservation programs. However, the companies have separate weather normalization mechanisms in place that apply to all customer classes.

Generic infrastructure — Potomac Electric Power Co., or Pepco, uses a grid resiliency charge to recover the costs associated with its accelerated feeder replacement program. A similar program and rider are in place for Delmarva Power & Light. A reliability improvement plan and an associated rider are in place for Baltimore Gas and Electric, or BGE. The company is required to file for approval of its incremental plans on an annual basis. Court review of the program is pending.

State law permits the PSC to authorize gas utilities to implement riders to reflect costs associated with approved accelerated infrastructure replacement programs, establishing the Strategic Infrastructure Development and Enhancement, or STRIDE, program. The PSC has approved gas STRIDE programs and associated riders for BGE, WGL and CGM.

Other — BGE, CGM, Potomac Edison, Pepco and WGL have mechanisms in place to recover variations in certain taxes and fees.

Massachusetts

Electric fuel/gas commodity/purchased power — Quarterly electric fuel and purchased power adjustments were eliminated coincident with the start of retail competition. Rates for basic service, known as default service, are market-based; such rates reflect the competitive contracts for basic service supply entered into by the distribution utility. The utilities are not at risk for fluctuations in market prices.

Cost of gas adjustments, or CGAs, are determined semiannually based on seasonally-differentiated peak and off-peak costs. Over- and under-recoveries are credited to, or debited against, a deferred gas cost account and are reconciled by season. Any balance is ultimately passed along or recovered through the CGA factor, with carrying costs. A local gas distribution company, or LDC, must submit an amended gas adjustment whenever the company projects that its deferred gas cost balance will exceed 5% of the total seasonal gas costs.

Conservation program expense/environmental compliance/other — The DPU has adopted energy efficiency reconciliation factors, or EERF, for the state's electric utilities. The EERF is a fully reconciling funding mechanism designed to recover the costs associated with the state's electric energy efficiency investments that are in excess of the level collected from other funding sources, including the systems benefits charge, proceeds from the forward capacity market and proceeds from the Regional Greenhouse Gas Initiative.

Local gas distribution adjustment clauses, or LDACs, are in place, with rate changes implemented on a semiannual basis, to reflect recovery of reconcilable gas distribution-related costs that are not included in base rates. Such expenses may include demand-side management costs, environmental response costs associated with manufactured gas plants, residential arrearage management programs, low-income discounts, pension and related costs, the revenue requirement on targeted infrastructure recovery factors, and gas system enhancement programs, or GSEP, investment, and attorney general expenses. LDACs are applicable to all firm customers.

Renewables expense/generation capacity — A solar cost adjustment tariff is in place for Western Massachusetts Electric Company's, or WMECO's, Massachusetts Electric's, or ME's, and Fitchburg Gas and Electric's, or FG&E's, investments in certain solar generation facilities.

Generic infrastructure — Under state law, each of the state's LDCs files with the DPU a plan, called a gas system safety enhancement program, or GSEP, to address aging or leaking natural gas infrastructure. The related costs/investments may be recovered through a GSEP provision.

Initially, LDCs that seek to participate in the program must file a plan that is designed to remove leak-prone cast-iron and unprotected steel piping from the LDC's system over a 20-year period. Participating LDCs must file by Oct. 1 of each year a list of projects the utility plans to complete during the upcoming construction season as well as proposed adjustments to distribution rates effective May 1 of the following year that will allow for recovery of program-related costs. The law specifies the criteria that the DPU must apply during its evaluation of the LDC's plan, and, if the plan meets those criteria, the Department must approve the plan and the adjusted distribution rates. On or before May 1 of each year during an LDC's program, the LDC must file final documentation for projects completed during the prior year to demonstrate substantial compliance with its plan in effect for that year and that project costs were reasonably and prudently incurred. The LDC's May 1 filing reconciles the estimated costs that were approved for recovery to the actual costs incurred during the year, and adjustments to distribution rates, for recovery or refund, are made accordingly. The ROE authorized in the company's most recent rate case is to be utilized in its GSEP. Annual changes in the revenue requirement eligible for recovery may not exceed 1.5% of the company's most recent calendar year total firm revenues, including gas revenues attributable to sales and transportation customers. Any revenue requirement approved by the DPU in excess of the cap may be deferred for recovery in the following year.

ME's decoupling mechanism includes a tracking mechanism to reflect capital investment. The mechanism contains an annual spending cap and a cap on annual rate increases under the mechanism of 1% of revenues. Amounts over the cap are to be addressed in the company's next general rate proceeding.

A capital cost adjustment mechanism is in place for FG&E's electric division that permits the company to recover costs associated with post-test-year capital additions. The mechanism contains an annual spending cap and a cap on annual rate increases under the mechanism of 1% of total revenues, with any amounts above the cap to be deferred for future recovery with carrying charges. To the extent that FG&E's capital expenditures exceed the amount it is allowed to recover through the mechanism, the company can seek to include such investment in rate base in its next base distribution rate proceeding.

Other — Recovery mechanisms for pension and post-employment benefits other than pensions are in place for ME, WMECO, NSTAR Electric, NSTAR Gas, FG&E, Liberty Utilities (New England Gas), Boston Gas, Colonial Gas and Bay State Gas. Such costs are to be recovered through the LDAC reconciliation mechanism for gas utilities and a separate rate component for electric utilities.

Michigan

Decoupling — The PSC had approved the implementation of electric revenue decoupling mechanisms, or RDMs, for Consumers Energy, or CE, Upper Peninsula Power, or UPP, and DTE Electric, or DTE-E; however, the Michigan Court of Appeals has ruled that the PSC does not have statutory authority to approve RDMs for electric utilities. In addition, legislation enacted in December 2016 permits the PSC to adopt electric revenue decoupling mechanisms only for small electric utilities.

State law permits a gas utility that spends at least 0.5% of its revenue on energy efficiency programs to institute an RDM. A gas RDM is currently in place for DTE Gas, or DTE-G, and CE. Michigan Gas Utilities, or MGU does not currently have an RDM in place.

Generic infrastructure — DTE-G utilizes an infrastructure recovery mechanism, or IRM, that enables it to earn a return of and on the costs associated with capital investment in the company's meter move-out, accelerated main replacement, and pipeline integrity programs. In a July 2017 rate case decision, the PSC authorized CE's gas operations an IRM that enables the company to recover incremental capital investments beyond the test year in both 2018 and 2019, subject to reconciliation.

RTO-related transmission expense — CE, DTE-E and UPP recover transmission costs through the power supply cost-recovery mechanism.

Minnesota

Decoupling — Minnesota Energy Resources, or MER, is operating under a pilot revenue decoupling mechanism, or RDM, that applies to the company's residential and small commercial/industrial rate classes. There is a 10% symmetrical cap on revenue changes generated through the application of the RDM, and the mechanism utilizes per-customer distribution revenues for each rate group. Rate changes required by the operation of the RDM are implemented annually. The pilot was to expire at year-end 2016, but in a 2016 decision in a base rate case, the PUC authorized MER to continue the RDM for an additional three years through Dec. 31, 2019.

CenterPoint Energy Resources, or CER, had been operating under a pilot RDM that was to expire in 2018, but which was made permanent in a rate case settlement approved by the PSC in May 2018. The RDM applies to all customer classes except market-rate customers and is subject to a cap on annual adjustments under the mechanism that is equal to 10% of non-gas margin revenue after removing conservation costs.

In 2015, the PUC authorized Northern States Power-Minnesota, or NSP-M, to implement a pilot, electric RDM with a 3% cap on base revenues for the residential, small commercial and industrial non-demand classes, beginning in 2016.

NSP-M could seek to recover amounts over the cap provided it could show that its DSM and/or other initiatives were a substantial contributing factor to the declining energy consumption and that other non-conservation factors were not the primary factors for the under-recovery. However, in May 2017, the PUC approved a settlement in an NSP-M electric rate case, thereby authorizing the company the following annual sales true-ups: for 2016, weather-normalized actual sales are to be used to set final 2016 rates with no cap; for 2016-2019, full revenue decoupling is to be implemented for residential and non-demand metered commercial customer classes subject to a 3% cap; and for 2017-2019, an annual true-up for the non-decoupled customer classes with a 3% cap is to be utilized.

Generic infrastructure — NSP-M uses a gas utility infrastructure cost rider to recover the costs associated with certain gas infrastructure upgrades, especially those that are safety-related, outside of a general rate case.

Mississippi

Decoupling — Atmos Energy utilizes a weather normalization adjustment rider that is in place during the months of November through April and is adjusted monthly during that time. Entergy Mississippi, or EM, Mississippi Power, or MP, and Atmos have energy efficiency, or EE, riders in place that provide for recovery of EE program costs and the lost contributions to fixed costs associated with such programs.

Environmental compliance — EM and MP are permitted to recover emission allowance expenses through their fuel adjustment clauses. MP utilizes an environmental compliance overview, or ECO, plan. The ECO plan establishes procedures to facilitate the PSC's review of the company's environmental compliance strategy and provides for rate recovery of costs, including the cost of capital, associated with PSC-approved environmental projects on an annual basis outside of a base rate case.

Generic infrastructure — A rider designed to recover costs associated with certain system integrity projects is in place for Atmos.

Other — EM and MP have in place an ad valorem tax adjustment rider. A storm reserve rider is in place for EM.

Missouri

Conservation program expense/decoupling — Legislation enacted in June 2018 provides for the PSC to approve decoupling mechanisms for the electric utilities that address the impact on revenues of variations in usage due to the effects of weather and conservation initiatives. Kansas City Power and Light, or KCP&L, has in place a mechanism that provides for recovery of demand-side management program-related costs and a related "throughput disincentive" and may provide for a performance incentive based upon measurable verified energy efficiency savings. KCP&L-Greater Missouri Operations, or GMO, and UE have similar mechanisms in place for their electric operations. Local gas distribution companies may request PSC approval of a mechanism to reflect the impact on revenues of changes in customer usage due to variations in weather and/or conservation.

Renewables expense — The PSC's rules specify that electric utilities may file for a renewable energy standards rate adjustment mechanism, or RESRAM, to reflect prudently incurred costs or a pass-through of benefits received as a result of compliance with the state's renewable energy standards. The RESRAM is to be capped at a 1% annual rate impact. GMO has a RESRAM in place.

Environmental compliance — The PSC's rules pertaining to environmental cost recovery mechanisms, or ECRMs, specify that a portion of the utility's environmental costs may be recovered through an ECRM and a portion may be recovered through base rates. The annual recovery of these costs is to be capped at 2.5% of the utility's Missouri gross jurisdictional revenues, less certain taxes. None of the utilities currently have an ECRM in place. However, Empire District Electric, KCP&L, GMO and UE recover emission allowance costs through their fuel adjustment clauses.

Generic infrastructure — KCP&L, GMO and UE use a rider to recover costs associated with certain government-mandated investments. Liberty Utilities (Midstates Natural Gas), Laclede Gas, Missouri Gas Energy, or MGE, and UE utilize an infrastructure system replacement surcharge to recover costs associated with certain gas distribution system replacement projects.

RTO-related transmission expense — Empire's, KCP&L's, GMO's and UE's fuel adjustment clauses, or FACs, reflect variations in certain transmission-related costs.

Other — Off-system sales margins that vary from the levels included in base rates flow through the FACs of Empire, KCP&L, GMO and UE. Liberty Utilities (Midstates Natural Gas), Empire, KCP&L, GMO, Laclede, MGE and UE have mechanisms in place to recover variations in certain taxes and franchise fees.

Montana

Electric fuel/gas commodity/purchased power — In accordance with the state's restructuring statutes, NorthWestern Corp. sold its generation assets and entered into purchased power contracts with competitive suppliers to serve provider-of-last-resort customers. NorthWestern recovers supply costs through a cost recovery mechanism adjusted monthly, under which rates are based on estimated loads and electricity costs for the upcoming tracking period. The Montana PSC recently approved a power costs and credit adjustment mechanism for NorthWestern Corp. for supply expenses. The Montana PSC reviews and adjusts rates for differences between estimates and actual results. MDU Resources Group, or MDU, utilizes a monthly-adjusted fuel and purchased power cost-recovery mechanism.

Decoupling — MDU utilizes a mechanism to recover the costs associated with gas conservation programs as well as to recoup revenues lost as a result of the programs.

Other — A competitive transition charge mechanism is in place for NorthWestern through which the company recovers electric restructuring-related out-of-market costs associated with certain purchased power contracts. A similar transition charge is in place for the company's gas operations. NorthWestern is also currently reflecting, in its gas commodity mechanism on an interim basis, costs related to certain natural gas production assets it recently acquired, pending a review by the PSC. For MDU, off-system sales margins are shared by ratepayers and shareholders through the fuel clause.

Nebraska

Generic infrastructure — Gas utilities are allowed to apply for approval to use an infrastructure system replacement cost recovery, or ISRCR, rider. The ISRCR rider is to provide for timely recovery of certain capital investments outside of a general rate case and is to be capped at 10% of a utility's Nebraska-jurisdictional annual base revenue level. Following PSC approval, an ISRCR rider is to expire upon the earlier of the implementation of new rates stemming from the conclusion of a general rate case filed subsequent to the PSC's approval of the ISRCR rider or 60 months. Black Hills Nebraska Gas Utility has an ISRCR rider in place. Black Hills Gas Distribution, or BHGD, has a forward-looking system safety and integrity rider tariff and a system and integrity rider charge in place.

Other — BHGD uses a rider through which the company recovers external rate case expenses of the Office of the Public Advocate and the PSC that are assessed to the utility. All the utilities have line items on their bills through which variations in franchise fees are recovered.

Nevada

Decoupling — The lost revenues associated with energy efficiency and conservation programs for Sierra Pacific Power and Nevada Power are recovered using a periodically adjusted balancing account, referred to as a lost revenue adjustment mechanism.

State law and PUC rules include provisions, including revenue decoupling, to address disincentives to gas company participation in energy conservation programs. Southwest Gas has a decoupling mechanism in place.

Generic infrastructure — PUC rules allow for the establishment of a gas infrastructure replacement mechanism that will permit the utilities to recover between rate cases the revenue requirement associated with their gas infrastructure replacement projects. Southwest Gas currently has such a rider in place.

Other — Southwest Gas utilizes a mechanism designed to allow the company to recover from, or refund to, ratepayers the difference between actual bad-debt expenses and the level reflected in base rates.

New Hampshire

Electric fuel/gas commodity/purchased power — Fuel and purchased power adjustment clauses had been utilized prior to the implementation of retail choice in the early 2000s. Public Service Company of New Hampshire, or PSNH, now recovers its power costs through a periodically adjusted default service rate, which reflects the revenue requirements of its generating assets and the cost of power purchases. It also includes a reconciliation of the difference between the company's costs and revenues for the previous period.

Liberty Utilities (Granite State Electric) and Unitil Energy Systems sold their generation as part of their restructuring agreements. These distribution-only companies supply default energy service through a request-for-proposals process supervised by the PUC.

Decoupling — In 2016, the PUC established an energy efficiency resource standard, or EERS, for New Hampshire's electric and gas utilities that became effective Jan. 1, 2018. The utilities implemented lost revenue adjustment mechanisms, or LRAMs, effective Jan. 1, 2017, to recover lost revenue due to the installation of energy efficiency measures. The PUC ordered the utilities to seek approval of a decoupling mechanism or other lost-revenue recovery mechanism as an alternate to the LRAM in their first distribution rate cases after the first EERS triennium, if not before.

In a rate case decided on April 17, 2018, for Liberty Utilities (EnergyNorth Natural Gas) Corp., the PUC adopted a full decoupling mechanism effective Nov. 1, 2018. The PUC said adoption of the decoupling mechanism “reduces the risk that Liberty will not recover its authorized revenue requirement” and “the stabilized cash flow should improve the company's credit rating and thus its access to lower cost debt.” In light of the decoupling mechanism, the PUC ordered Liberty Utilities to file its next rate case using a historical test year no later than Dec. 31, 2020, to reset test-year revenues.

Generic infrastructure — A cast-iron/bare-steel rate adjustment mechanism is in effect for Liberty Utilities (EnergyNorth Natural Gas). Reliability enhancement and vegetation management programs and accompanying riders are in effect for Liberty Utilities (Granite State Electric), PSNH and Unitil Energy Systems. The programs provide for recovery of both the capital investment and increases to operation and maintenance expenses necessary for ongoing system reliability and vegetation management efforts.

New Jersey

Electric fuel/purchased power/gas commodity — Electric utilities procure power to meet customer basic generation service in the wholesale market and are permitted to flow these costs to ratepayers on a dollar-for-dollar basis through the basic generation service charge. However, costs associated with buyout/buy-down of above-market priced purchased power contracts with non-utility generators and costs associated with any remaining purchase requirements are recovered through a separate non-bypassable charge. For local gas distribution companies, or LDCs, basic gas supply service, or BGSS, charges for non-switching residential and small-commercial customers are adjusted periodically to reflect fluctuations in gas commodity prices.

Conservation program expense — Costs associated with the NJ Clean Energy Program, a legislatively mandated initiative to encourage the initiation of energy efficiency and renewable energy programs, are included for recovery through the non-bypassable societal benefits charge on customer bills. The BPU periodically reviews each company's programs and sets the statewide amount to be recovered through the charge. Certain utilities have incremental energy efficiency/conservation programs in place, the costs of which may be recovered through rider mechanisms.

Decoupling — Weather normalization clauses are in place for Elizabethtown Gas and the gas operations of Public Service Electric and Gas, or PSEG. A version of a revenue decoupling mechanism is in place for New Jersey Natural Gas, or NJNG, and South Jersey Gas, or SJG. Operation of the mechanisms is contingent on the companies achieving certain capacity-reduction targets and earnings tests as specified in their BPU-approved conservation incentive programs.

Environmental compliance — The electric and gas utilities were permitted to recover through a rider costs, including a return on the related investment, associated with participation in the Regional Greenhouse Gas Initiative, including energy efficiency, demand response and solar initiatives. Participation in the initiative was suspended by former Gov. Chris Christie in 2011. Jersey Central Power and Light, or JCPL, Pivotal Utility Holdings, PSEG, NJNG and SJG are permitted to recover costs associated with former manufactured gas plant site cleanup outside of base rates through an adjustment mechanism. Such expenses are deferred and recovered over rolling seven-year periods, including carrying costs on the unamortized balance.

Generic infrastructure — Following Hurricane Sandy, the BPU directed utilities to develop mitigation and hardening infrastructure modernization plans and indicated that it would be open to innovative cost recovery mechanisms for such plans. The BPU subsequently approved modernization plans and related recovery mechanisms for several utilities: PSEG — the Energy Strong program; ACE — PowerAhead; Rockland Electric — Storm Hardening Program; NJNG — the Reinvestment in System Enhancement program, and Safe Acceleration and Facility Enhancement program; Elizabethtown Gas — Elizabethtown Natural Gas Distribution Utility Reinforcement Effort; and, South Jersey Gas — the Storm Hardening and Reliability program.

In December 2017, the BPU adopted a rule outlining an infrastructure investment program, or IIP. The IIP framework allows for expedited rate treatment of BPU-approved, infrastructure improvement programs on an ongoing basis. ACE, PSEG and JCPL have filed for approval of plans under the new rule.

Other — All utilities have mechanisms in place to recover variations in certain taxes and fees. In addition, electric utilities recover certain costs associated with low-income customer assistance programs and other public-policy driven initiatives through a societal benefits charge. Costs associated with the restructuring-related buyout/buy-down of electric non-utility generation contracts and other regulatory asset balances are recovered through non-bypassable charges.

New Mexico

Environmental compliance — An SO₂ rider is in place for Public Service Co. of New Mexico, or PSNM, through which customers are credited their share of revenues from allowance sales.

Generic infrastructure — PSNM has riders in place that are designed to recover costs associated with undergrounding distribution projects in Rio Rancho and Albuquerque.

Other — All utilities have a mechanism in place to recover variations in certain taxes and franchise fees.

New York

Electric fuel/gas commodity/purchased power — Historically, all energy utilities used an electric fuel adjustment clause, or FAC. With electric industry restructuring, however, generation was divested, and the electric companies have largely transitioned from the FAC to a market power adjustment clause, or MAC, or a commodity adjustment clause, or CAC. The MAC/CAC allows the distribution utilities to flow through the costs of power procured to serve customers who have not selected an alternative supplier.

Generic infrastructure — Most of the state's gas utilities may implement riders to recover certain costs associated with the replacement of leak-prone pipe above targeted miles established in rates.

Environmental compliance — Brooklyn Union Gas has a site investigation and remediation, or SIR, mechanism in place. If actual SIR expenses exceed the rate allowance by \$25 million, the company can implement a surcharge for the recovery of up to 2% of its prior year's aggregate revenues. To date, the mechanism has not been employed as the \$25 million threshold trigger has not been met.

Other — New York State Electric and Gas, or NYSEG, Rochester Gas and Electric, or RG&E, and Central Hudson Gas and Electric, or CHG&E, have rate adjustment mechanisms, or RAMs, in place that returns to or collects from ratepayers RAM-eligible deferrals and costs on a timely basis subject to a cap. For NYSEG and RG&E, RAM eligible deferrals are property taxes, major storm, gas leak prone pipe, certain Reforming the Energy Vision, or REV, costs and fees, and for NYSEG only, electric pole attachments.

For CHG&E's electric and gas operations, the RAM will return or collect the net balance of reconciliations for the following cost elements: property taxes, major storm, gas leak-prone pipe, and certain REV costs and SIR. While the other major utilities do not have RAMs yet, all major New York utilities reconcile such major cost elements as pension and other post-employment benefits, property taxes and SIR and may defer for future recovery any costs not provided in current rates. Consolidated Edison Co. of New York recovers via the MAC incentives earned under its earning adjustment mechanisms as well as costs and incentives related to non-wires alternatives.

North Carolina

Conservation program expense — State law authorizes the NCUC to approve an annual rider outside of a general rate case for electric utilities to recover all reasonable and prudent costs incurred for the adoption and implementation of demand-side management, or DSM, and energy efficiency, or EE, programs. The NCUC has authorized the major electric utilities to retain a percentage of the net savings associated with their DSM/EE programs.

Decoupling — Piedmont Natural Gas utilizes a margin decoupling mechanism/tracker that decouples the recovery of authorized margins from sales levels. Public Service Co. of North Carolina, or PSNC, also has such a mechanism in place.

Renewables expense — Costs incurred by electric utilities to procure renewable energy are recoverable through the fuel adjustment clause, or FAC, and the renewable energy portfolio standard, or REPS, rider, subject to certain caps. The avoided cost is recoverable through the FAC, and payments in excess of the avoided cost are recoverable through the REPS rider. Incremental operations and maintenance costs and annual research and development expenses up

to \$1 million are also recoverable through the REPS rider. The cost of utility-owned renewable generating facilities is recovered through a combination of the FAC, the REPS rider and base rates.

Environmental compliance — The costs of certain reagents, such as limestone, used in reducing or treating electric power plant emissions may be recovered through the FAC.

Generic infrastructure — Piedmont Natural Gas uses an integrity management rider, or IMR, that allows the company to track and recover capital expenditures incurred to comply with federal pipeline safety and integrity requirements outside of a general rate case. PSNC uses an IMR to recover capital expenditures related to the company's transmission and distribution pipeline integrity management programs.

North Dakota

Decoupling — MDU Resources', or MDU's, gas operations are subject to a weather normalization adjustment mechanism that is in effect for the winter heating season from Nov. 1 through May 1. Northern States Power-Minnesota, or NSP-M, operates under straight fixed-variable gas rates.

Generation capacity — MDU operates under a generation resource recovery rider through which it recovers costs associated with its Reciprocating Internal Combustion Engine Project at its Lewis & Clark Station, which will then be rolled into base rates by Jan. 1, 2020.

Environmental compliance/generic infrastructure — Electric utilities are permitted to earn a cash return on construction work in progress through a separate rate adjustment mechanism for investments in transmission infrastructure and for federally mandated environmental compliance projects. Once the facilities achieve commercial operation, the facilities are reflected in rate base as part of a general rate proceeding, and the surcharge terminates. MDU and Otter Tail Power, or OTP, are operating under separate transmission and environmental cost recovery riders. NSP is operating under a transmission cost recovery rider.

Renewables expense — All three utilities recover costs associated with investments in renewable energy facilities through a renewable resource cost recovery rider.

Other — Through NSP-M's fuel and purchased power adjustment, or FPPA, clause, the company shares equally with ratepayers prospective "non-asset-based" wholesale power margins, or WPMs. Through its FPPA clause, OTP allocates ratepayers' share of asset-based WPMs.

Ohio

Electric fuel/gas commodity/purchased power/generic infrastructure/other — As a result of electric industry restructuring, utilities operate under electric security plans, or ESPs, that provide for the pass-through of the utilities' cost of power to serve standard service offer customers.

The current ESPs for Cleveland Electric Illuminating, or CEI, Ohio Edison, or OE, and Toledo Edison, or TE, include delivery capital recovery riders that reflect a return of and on incremental distribution, sub-transmission and general plant-in-service investments not already included in the companies' base rates. The companies also utilize distribution modernization riders that allow them to recover the costs associated with an array of infrastructure investments, thereby allowing parent FirstEnergy Corp. to maintain its investment grade credit ratings.

Under Duke Energy Ohio's, or DEO's, current ESP, the company's generation requirements for non-switching customers are procured and priced through a competitive bid process, or CBP. The related riders are fully bypassable for switching customers.

Ohio Power's, or OP's, ESP allows the company to utilize riders for costs related to distribution investment, enhanced service reliability and storm damage recovery.

Dayton Power and Light's, or DP&L's, ESP, includes a distribution modernization rider that provides credit support to the company.

East Ohio Gas, or EOG, Columbia Gas of Ohio, or CGO, and Vectren Energy Delivery of Ohio, or Vectren, conduct auctions for competitive suppliers to bid to directly serve customers. The companies had previously obtained their gas supplies through negotiated bilateral contracts, but under the current plan, the companies conduct an auction that allows suppliers to compete to supply portions of the gas supply requirements. Customers who do not choose a specific competitive supplier are randomly assigned a supplier based on the auction results. DEO is the only major gas utility in the state to continue to use the gas cost recovery clause.

Conservation program expense/decoupling — The ESPs for each of the Ohio electric utilities include a rider that allows for recovery of energy efficiency program costs and lost distribution margin associated with these programs. OP has a full decoupling mechanism in place for residential and small commercial customers. Ohio's gas distribution companies, namely EOG, CGO, Vectren and DEO all operate under straight fixed-variable prices.

Environmental compliance — DEO recovers certain costs related to former manufactured gas plant sites through a rider

Generic infrastructure — The current ESPs in place for CEI/OE/TE and DEO include a rider that reflects a return of and on incremental distribution-related investments not already included in base rates. CEI/OE/TE also uses a distribution modernization rider that addresses certain costs not included in the companies' other riders. OP's ESP allows the company to utilize riders for costs related to distribution investment. CGO has a rider in place for infrastructure replacement costs. Vectren has a rider in place through which it recovers the costs associated with an accelerated main and service line replacement program. EOG has riders in place to recover costs related to its pipeline infrastructure replacement program and its installation of automated meter-reading equipment. DEO uses a rider to recover the costs associated with its gas delivery infrastructure improvement program.

Other — All utilities have mechanisms in place to recover variations in certain taxes and fees. CEI/OE/TE, OP, DEO, EOG, CGO and Vectren have riders in place to recover variations in uncollectible expense.

Oklahoma

Conservation program expense/decoupling — Oklahoma Gas and Electric, or OG&E, and Public Service Oklahoma, or PSO, utilize riders to recover the costs associated with energy efficiency programs, related "lost revenues" and certain "incentives." CenterPoint Energy Resources, or CER, and Oklahoma Natural Gas, or ONG, utilize weather normalization mechanisms and also recover the costs associated with their energy efficiency programs and certain incentives through their performance-based ratemaking plan riders.

Environmental compliance/other — OCC rules permit the commission to approve requests to recover costs associated with environmental compliance through a rider. OG&E's storm cost recovery rider includes provisions that require a credit to ratepayers for the Oklahoma jurisdictional portion of net revenues received from the sale of SO2 credits.

Generic infrastructure — OG&E uses a rider to reflect in rates the Oklahoma jurisdictional costs associated with certain transmission projects that have been approved by the Southwest Power Pool and that have been completed by the company.

Other — OG&E uses a storm cost recovery rider to reflect any differences between the level of storm costs reflected in base rates and the level of such costs actually incurred in a given year. Ratepayers' share of off-systems sales margins flow through PSO's fixed-cost adjustment rider. OCC rules permit the commission to allow utilities to recover security/safety-related costs through a surcharge/rate rider. OG&E, PSO, CER and ONG have a mechanism in place to recover variations in certain taxes and franchise fees. ONG has a rider in place for costs related to lost, used and unaccounted-for gas.

Oregon

Decoupling — An electric revenue decoupling mechanism is to be in effect for Portland General Electric until year-end 2019. The mechanism is designed to provide for the recovery of the revenue shortfall resulting from reduced consumption patterns associated with residential and certain commercial customers' conservation efforts.

Northwest Natural Gas, or NWN, uses a decoupling mechanism designed to counteract the impact on revenues of changes in average residential and commercial customers' consumption patterns due to conservation efforts. The company has a separate weather-adjusted rate mechanism, or WARM, in place for these customers.

Cascade Natural Gas, or CNG, has a partial decoupling mechanism, which adjusts for both conservation-related demand reductions and deviations from normal weather. The mechanism has no set termination date but will be reviewed in the fourth quarter of 2019.

A full decoupling mechanism is in place for Avista's residential and commercial rate groups. The mechanism is to be reviewed by the PUC in September 2019.

Environmental compliance — CNG employs an environmental remediation cost adjustment to recover costs for a former manufactured plant. NWN utilizes a site remediation and recovery mechanism to provide for recovery of costs incurred, and that continue to be incurred, for environmental remediation of legacy manufactured gas plant operations.

Pennsylvania

Electric fuel/gas commodity/purchased power/renewables expense — Historically, electric utilities were permitted to recover fuel and purchased power costs through a semi-automatic adjustment mechanism, the energy cost rate, or ECR. However, in conjunction with electric industry restructuring, the ECR was eliminated. Generation required to meet provider-of-last-resort, or POLR, obligations for each company is competitively procured and priced. Renewable resource requirements are included in this process. Prices for POLR service are adjusted on a current basis as each procurement occurs.

A non-automatic procedure is in place for recovery of fluctuations in gas costs. Tariff changes must be filed for PUC review six months prior to the proposed effective date. The companies may recover the difference in actual costs versus those projected, if the actual costs were reasonably incurred. Such filings may be made no more often than once every 12 months; however, quarterly updates to reflect unrecovered gas costs from the prior quarter are permitted.

Conservation program expense — State law and PUC rules allow electric distribution utilities to recover on an expedited basis through an adjustment clause outside of a rate case the costs associated with legislatively mandated/PUC-approved energy conservation programs. In 2011, the PUC approved demand reduction requirements for Duquesne Light, Metropolitan Edison, or MetEd, Pennsylvania Electric, or Penelec, Pennsylvania Power, or PPC, West Penn Power, or WPP, PECO Energy and PPL Electric Utilities, or PPL-E. The PUC subsequently approved related compliance plans and cost-recovery mechanisms. In 2016, the PUC approved a voluntary plan proposed by UGI Utilities, or UGIU.

Decoupling — Columbia Gas of Pennsylvania, or CGP, has a weather normalization adjustment in place for residential customers. In 2016, the PUC opened a generic investigation into alternative ratemaking strategies including revenue decoupling mechanisms. En banc hearings were subsequently held, and the proceeding is ongoing. On May 3, 2018, the PUC voted to issue a draft proposed policy statement allowing the state's utilities to pursue alternative ratemaking frameworks. A final order including the proposed policy statement was released for comment in May, and the comment period runs through November 2018. House Bill 1782, also known as Act 58 of 2018, signed into law by Gov. Tom Wolf on June 28, 2018, specifically grants the commission the authority to approve innovative ratemaking mechanisms for energy and water utilities. Such mechanisms include, but are not limited to, revenue decoupling, performance-based rate plans, formula rates, multiyear rate plans and a framework incorporating a portfolio of alternative mechanisms.

Generic infrastructure — State law allows the PUC to approve automatic adjustment clauses to recognize, between general rate cases, utility investments in certain infrastructure projects. Distribution system improvement charges, or DSICs, have been approved for CGP, Duquesne Light, PECO's gas and electric operations, PPL-E, Peoples Natural Gas, Equitable Gas, UGI Central Penn Gas, UGI Penn Natural Gas, Peoples Natural Gas, Peoples TWP, MetEd, Penelec, PPC and WPP. National Fuel Gas is the only RRA-covered company that does not use a DSIC.

MetEd, Penelec, PPC and WPP recover costs associated with smart-meter deployment plans through a rider between rate cases.

Other — All utilities have mechanisms in place to recover variations in certain taxes and franchise fees. PECO recovers nuclear decommissioning costs through a rider. PPL-E has an expedited cost recovery mechanism in place to address storm restoration costs that vary from certain levels. PPL-E recovers universal service program costs through a rider. MetEd, Penelec, PPC and WPP also have riders in place for universal service and uncollectible costs.

Rhode Island

Electric fuel/gas commodity/purchased power — Prior to the implementation of electric industry restructuring, automatic fuel adjustment clauses were used by the utilities. In accordance with the restructuring law and PUC-approved restructuring plans, investor-owned utilities are to provide standard offer service to customers who do not select an alternative provider through 2020. The cost of providing this service is fully recoverable, with such rates reset on a periodic basis.

Conservation program expense/environmental compliance — Narragansett Electric, or NE, utilizes an annual distribution adjustment clause, or DAC, for its gas operations to recover costs associated with energy efficiency programs and environmental response.

Generic infrastructure — State law permits NE to submit for PUC approval annual infrastructure spending plans for its electric and gas operations and recovery of expenses associated with an inspection and maintenance program and vegetation management program.

Other — A pension adjustment mechanism is in place for NE's electric and gas operations that reconciles actual pension and other post-employment benefits expense to the level reflected in base rates. NE recovers electric commodity-related uncollectibles, including associated administrative costs, through its standard offer service rate. In addition, the company recovers transmission-related bad debt through a transmission-related uncollectible mechanism. NE reflects credits associated with margins from non-firm sales and transportation, earnings sharing and service quality adjustments through the DAC.

South Carolina

Decoupling — Weather normalization adjustments are in place for the gas operations of South Carolina Electric and Gas, or SCE&G, and Piedmont Natural Gas that apply only to residential and small commercial customers.

Environmental compliance — Emissions allowance costs and the cost of certain materials used in reducing or treating electric power plant emissions are reflected in the fuel clause.

Generation capacity — The South Carolina Legislature on June 28, 2018, overrode Gov. Henry McMaster's veto of House Bill 4375, which among other things, prospectively repeals the state's Base Load Review Act, or BLRA; thus, no future projects could fall under its purview.

Previously, under the BLRA, the PSC was permitted to issue a BLRA order, which constituted an upfront determination that a generating plant is "used and useful" and that associated proposed capital expenditures are prudent and ultimately should be reflected in rates as long as the plant is constructed within the estimated construction schedule, including contingencies and capital budget. For nuclear plants only, if requested by a utility, the BLRA order would

specify initial revised rates reflecting the utility's pre-construction and development costs. At least one year after its filing of a BLRA application, and no more frequently than annually thereafter, the utility was permitted to file for PSC approval of revised rates reflecting a cash return on a nuclear plant's construction work in progress, or CWIP.

The PSC had already issued a BLRA order for SCE&G's two-unit expansion of its V.C. Summer nuclear plant, and the company is currently earning a cash return on part of the plant's CWIP. However, in July 2017, SCE&G ceased construction and abandoned the two new Summer units. As a result of the abandonment, the ultimate ratemaking for the company's investment remains to be determined. In addition, H.B. 4375 reduced the amount in rates that SCE&G had been collecting under the BLRA.

South Dakota

Conservation program expense/decoupling — A demand-side management, or DSM, cost adjustment mechanism is in place for Northern States Power-Minnesota, or NSP-M, through which the company recovers costs associated with DSM/efficiency programs. The mechanism includes a 30% bonus to account for lost margins related to DSM/efficiency measures. Black Hills Power, or BHP, operates under an efficiency adjustment rider through which the company recovers the cost of its energy efficiency programs as well as any lost revenues associated with the programs. Weather impacts are not reflected in the mechanism.

Generation capacity/generic infrastructure — NSP-M utilizes an infrastructure rider to recover costs associated with certain generation, transmission and distribution capital additions once the related facilities have achieved commercial operation and to reflect certain changes in property taxes.

Other — Through its fuel and purchased power adjustment clause, BHP credits ratepayers a portion of the margins from renewable energy credit sales and power marketing income. NSP-M operates under certain wholesale power margin sharing provisions, and allocates ratepayers' share of any such margins through its fuel clause. NSP-M also credits ratepayers a portion of revenues generated from renewable energy credit sales through its fuel clause.

Tennessee

Decoupling — Weather normalization adjustment, or WNA, clauses are in place for Atmos Energy and Piedmont Natural Gas, or PNG. A full revenue decoupling mechanism is in place for Chattanooga Gas, or CG's, residential and small commercial customers. A WNA rider is also in place for CG's industrial, commercial and other customers that do not operate under the decoupling mechanism.

Other — Atmos Energy, PNG and CG utilize riders related to capacity management and release, off-system sales and capacity assignment.

Atmos and CG operate under riders through which the companies share with ratepayers gross profit margin reductions associated with large industrial or commercial customers that are served under negotiated contracts and are able to bypass the utilities' distribution system. Through its purchased gas adjustment rider, PNG recovers margin losses associated with bypassable customers being served under negotiated contracts.

Texas PUC

Electric fuel/purchased power — For electric utilities that have not implemented retail competition, fuel and purchased power costs are recovered through a separate fuel factor, the level of which is established in base rate cases. Between base rate cases, the fuel factor may be adjusted, following hearings, based on projected fuel costs for the period the fuel factor will be in effect, subject to true-up. Capacity costs associated with purchased power are recovered through base rates, while energy costs are reflected in the fuel factor.

For companies that implemented retail competition, i.e., within the Electric Reliability Council of Texas, or ERCOT, the transmission and distribution utilities do not participate in generation procurement, and fuel/purchased power adjustment clauses were eliminated. In these territories, prices are set at the retail electric providers' discretion, following 45 days' notice to the PUC. The issue is moot for transmission-only utilities.

Conservation program expense — Electric distribution utilities are permitted to request recovery of costs associated with legislatively mandated energy efficiency programs through a streamlined adjustment mechanism.

Generic infrastructure — The PUC may approve periodic distribution cost recovery factors, or DCRFs for both vertically integrated and transmission-and-distribution-only electric utilities. The PUC may prohibit a utility from implementing a rate change under the mechanism if the commission determines that the utility is earning in excess of its authorized return prior to the adjustment. Amounts approved for recovery under the DCRF are to be rolled into base rates in the utility's subsequent rate case. DCRFs have been approved for AEP Texas, CenterPoint Energy Houston Electric, El Paso Electric, or EPE, Entergy Texas, Oncor Electric Delivery, Sharyland Utilities, Southwestern Electric Power Co. and Southwestern Public Service, or SWPS.

State law permits the utilities to recover costs associated with deployment of advanced metering technology through a separate surcharge, and the PUC has for the most part approved such mechanisms when requested. Advanced metering surcharges are in place for AEP Texas, CenterPoint, Entergy Texas, Oncor Electric Delivery and Texas-New Mexico Power, or TNMP.

For the service territories in which retail competition has been implemented, i.e., within ERCOT, transmission service providers are permitted to file up to twice annually, outside of a base rate case, to implement rate changes to reflect new transmission facilities through an interim transmission cost-of-service, or TCOS, mechanism. TCOS mechanisms have been approved for AEP Texas, CenterPoint, Oncor and TNMP, as well as transmission-only entities such as Cross Texas Transmission, Electric Transmission of Texas, Lone Star Transmission, Sharyland Utilities and Wind Energy Transmission Texas.

Utilities that have not implemented retail competition may file once annually between rate cases for adjustments to reflect new investment in transmission facilities. This procedure is known as a transmission cost recovery factor, or TCRF, mechanism.

RTO-related transmission expense — Transmission revenue requirements established through either base rates or the TCOS procedure are allocated among the distribution service providers, or DSPs, within ERCOT based on PUC-approved, load-based allocation factors established under the commission's "transmission matrix." The DSPs are permitted to adjust rates twice annually to reflect changes in wholesale transmission costs assigned to the DSP by ERCOT. These changes flow through a mechanism also known as a TCRF, which is in place for AEP Texas, CenterPoint, Oncor and TNMP.

Other — A rider is in place for Entergy that allows for recovery of variations in storm costs versus the level included in base rates on a current basis. CenterPoint, Entergy and TNMP have adjustment clauses in place to reflect changes in municipal franchise fees. EPE has a rider in place to recover lost revenue associated with the provision of discounted service to military bases, while SWPS recovers lost revenue associated with the provision of discounts to state universities through a rider.

Texas RRC

Gas commodity — Purchased gas cost adjustment clauses may be implemented under certain circumstances. Specifically, the RRC must consider: the ability of the pipeline or local distribution companies to control prices for gas purchased in light of competition and relative competitive advantage; the probability of frequent price changes; and the availability of alternative gas supply resources. In the context of a 2004 rate decision for Atmos Energy, the RRC approved the implementation of a gas cost recovery factor, or GCRF, to reflect gas commodity cost changes that occur between rate cases. A similar mechanism is in place for Texas Gas Service, or TGS, and CenterPoint Energy Resources, or CER. However, uncollectibles are not included in the GCRF for CER.

Decoupling — Weather normalization adjustments are in place for Atmos and TGS.

Generic infrastructure — Surcharge mechanisms for gas reliability infrastructure program, or GRIP, costs are in place for CER's Houston, South Texas, Beaumont/East Texas and Texas Coast Divisions. A similar mechanism is in place for most of the cities served by Atmos' Mid-Tex and West Texas Divisions. Operations in the City of Dallas and its environs, which are part of the Mid-Tex Division, are subject to a "Dallas Annual Rate Review Mechanism" that takes into account several factors including new infrastructure investment. The remaining Mid-Tex Division is subject to an annual formula ratemaking tariff, known as the annual Rate Review Mechanism, or RRM, which takes into account several factors including new infrastructure investment. Certain cities within the West Texas division are subject to a similar tariff, while others, such as Amarillo and Lubbock, operate with annually-updated GRIP mechanisms. An annual cost-of-service adjustment mechanism, similar to the RRM, is in place for TGS.

Other — Gas-commodity-related uncollectibles are recovered through Atmos' GCRF.

Utah

Decoupling — A weather normalization adjustment, or WNA, is in place for Questar Gas; however, customers may elect not to participate in the WNA. Questar Gas also utilizes a conservation-enabling tariff, or CET, which decouples non-gas revenues from the volume of gas used by general service, or GS customers. Under the CET, a margin-per-customer target is specified for each month, with non-weather-related differences to be deferred and recovered from, or refunded to, GS customers via periodic rate adjustments. Annual CET accruals are limited to 5% of base distribution non-gas, or DNG, revenues. Per a settlement adopted in the PSC's review of Dominion Resources' acquisition of Questar Gas parent Questar Corp., incremental CET accruals that exceed the 5% cap do not earn interest, as had previously been permitted. The amortization of CET accruals is limited to 2.5% of the total Utah-jurisdictional base DNG GS revenues. Together, the WNA and CET act as a full revenue decoupling mechanism.

Renewables expense — PacifiCorp operates under a renewable energy credit, or REC, mechanism that tracks variations in REC revenues from a base level established in the most recent general rate case, with any differences to flow to customers via an annual credit or surcharge. Separately, an adjustment mechanism is in place for PacifiCorp through which the company recovers costs associated with its solar program.

Generic infrastructure — A pilot infrastructure replacement adjustment mechanism is in place for Questar Gas that permits the company to recover, between rate cases, the incremental costs associated with the replacement of high-pressure natural gas feeder lines. The mechanism is to be adjusted at least annually and has an annual budget cap.

Other — Questar Gas flows ratepayers' share of its capacity release revenue via its semiannual gas-cost pass-through proceedings.

Vermont

Electric fuel/gas commodity/purchased power — Power cost adjustment, or PCA, mechanisms are permitted, provided that the mechanisms are part of an alternative regulation plan. Green Mountain Power, or GMP, has a PCA in place that allows the company to recover from, or credit to, customers, on an annual basis, 90% of the energy costs that are more than \$0.3 million higher or lower than the energy costs included in rates.

Virginia

Electric fuel/gas commodity/purchased power — Energy and capacity charges for "economy" purchases are included in the electric fuel factor calculation. Energy charges associated with reliability purchases may flow through the fuel factor, but capacity charges are recovered through base rates.

Conservation program expense — State law permits the SCC to approve rider mechanisms for the recovery of utilities' conservation and energy efficiency program costs. Such mechanisms are in place for Virginia Electric and Power, or VEPCO, Appalachian Power, or APCO, and Columbia Gas of Virginia, or CGV.

Decoupling — A weather normalization adjustment, or WNA, rider is in place for Virginia Natural Gas, or VNG, and Washington Gas Light, or WGL. Separate WNA factors are calculated for each customer class, such that when applied to the billed volumes for each rate class as a surcharge or credit, the WNA factors produce a bill that recovers VNG's cost of service as approved by the SCC under normal weather conditions. WGL's WNA is calculated at the individual customer level rather than the customer class level. Similar programs are in place for Atmos Energy and CGV.

A separate revenue normalization adjustment, or decoupling, mechanism is in place that is designed to mitigate the impact on WGL's, VNG's and CGV's revenues of customers' participation in energy conservation programs.

Environmental compliance — State statutes permitted the electric utilities to seek SCC approval to begin recovering costs associated with environmental compliance and reliability improvement programs through an environmental and reliability factor, or ERF. In 2006, the SCC authorized APCO to implement an ERF that was in place through 2010, after which the related revenue requirement was rolled into base rates. In 2013, the SCC authorized APCO to implement a new environmental revenue adjustment clause, known as an E-RAC. The E-RAC has expired.

Generic infrastructure — The SCC may approve annually adjusted riders for the recovery of costs/investments, including a cash return on construction work in progress, or CWIP, associated with utility projects to replace existing overhead distribution facilities of 69 kV or less located within the Commonwealth with underground facilities. Investments recognized through an approved rider would be capped at 5% of the utility's total distribution rate base as determined in the most recently decided biennial review proceeding at the time the adjustment is requested. Investment excluded from the rider would be deferred and would be eligible for recovery through a base rate proceeding. The rider's revenue requirement would reflect the rate of return approved in the company's most recent base rate case or biennial review proceeding. Such a rider is in place for VEPCO.

The SCC may also allow a natural gas utility that invests in natural gas facility replacement projects to recover, in the form of a rider, a return on investment, a revenue conversion factor, depreciation, property taxes and carrying costs on over/under-recovery of the related costs. Eligible infrastructure replacement is defined as natural gas facility replacement projects that (i) enhance safety or reliability by reducing system integrity risks associated with customer outages, corrosion, equipment failures, material failures or natural forces; (ii) do not increase revenues by directly connecting the infrastructure replacement to new customers; (iii) reduce or have the potential to reduce greenhouse gas emissions; (iv) are commenced on or after Jan. 1, 2010; and (v) are not included in the natural gas utility's rate base in its most recent rate case. Such riders have been approved for CGV, VNG and WGL.

Generation capacity — Legislation enacted in 2007 required the SCC to approve riders for the recovery of investment in certain types of generation facilities, including a cash return on CWIP and an incremental incentive return on equity premium for certain facilities that was to be applied from construction through a portion of the expected useful life. However, legislation enacted in 2013 limits the availability of ROE adders for new construction commencing after July 2013.

Legislation enacted in 2016 authorizes an investor-owned electric utility to recover the costs of purchasing certain solar generation facilities through a rate adjustment clause. A bill enacted in 2017 added pumped storage and hydroelectric generation facilities to the list of assets that are eligible to be included in VEPCO's/APCO's generation riders and investments to extend the lives of nuclear plants. Legislation enacted on March 9, 2018, calls for the SCC to approve recovery through riders of utility-owned solar and wind resources.

Several riders were approved for VEPCO and APCO under these statutes.

Renewables expense — The SCC may approve riders for the recovery of costs associated with meeting an SCC-approved voluntary renewable portfolio standard, or RPS, plan known as the RPS-RAC. Such riders are in place for APCO and VEPCO. State law initially included an incentive for compliance, but this was removed.

RTO-related transmission expense — In 2009, the SCC approved VEPCO's request to implement a transmission-cost recovery rider, known as Rider T, which is adjusted annually. A similar mechanism, known as the T-RAC, is in place for APCO.

Other — WGL and CGV are permitted to recover carrying charges on storage gas balances and over/under-collected gas costs, hexane costs and commodity-related uncollectibles expense through an adjustment mechanism. APCO and VEPCO have mechanisms in place to recover variations in certain taxes and franchise fees.

Washington

Electric fuel/gas commodity/purchased power — Avista Corp.'s energy recovery mechanism, or ERM, includes a graduated sharing of differences from a benchmark level. Power cost adjustment mechanisms are in place for PacifiCorp that allow for variations in power costs to be apportioned, on a graduated scale, between the company and customers.

Decoupling — Revenue decoupling mechanisms were approved for Puget Sound Energy's electric and gas operations in general rate cases decided in December 2017.

Full decoupling mechanisms for Avista's Corp.'s electric and gas operations are to be in place through 2019, incorporate an earnings test and demand-reduction targets, and specify caps on the increases to be implemented under the mechanism.

Cascade Natural Gas, or CNG's, decoupling mechanism incorporates an earnings test and a conservation target as well as caps on annual increases.

PacifiCorp's decoupling mechanism incorporates an earnings test and demand reduction targets as well as caps increases that may be implemented under the mechanism.

West Virginia

Environmental compliance/generation capacity/generic infrastructure — In the past, the PSC has approved temporary riders to provide recognition between rate cases of certain electric generation and infrastructure investments. In 2016, the PSC authorized Appalachian Power Co., or APCO, and affiliate Wheeling Power, or WP, to use a "construction surcharge" until their next rate case is decided to allow for recovery of costs associated with certain transmission projects.

Legislation enacted in 2015 allows the PSC to approve expedited cost recovery mechanisms associated with commission-approved multiyear gas infrastructure improvement plans; such treatment has been approved for Mountaineer Gas and Hope Gas.

In 2015, the PSC adopted a settlement authorizing Monongahela Power and Potomac Edison to implement a vegetation management rider that is to be updated twice per year and is to remain in place for five years. APCO/WP also utilize a rider for vegetation management related costs.

Other — The utilities have mechanisms in place to recover variations in certain taxes and franchise fees.

Wisconsin

Electric fuel/gas commodity/purchased power — Under the Wisconsin PSC's electric fuel rules, which apply to the state's five largest investor-owned utilities, each utility forecasts monthly and annual fuel and purchased power costs on a prospective basis. If a company's actual fuel and purchased power costs are outside a monthly or cumulative monthly variance range around the forecasts and the utility can demonstrate that these costs will likely be outside the annual range, the PSC may conduct a hearing to establish new rates. Currently, the annual variance range is plus or minus 2%. An electric utility is permitted to defer any fuel costs that are outside of its annual symmetrical variance range for subsequent recovery or refund. However, the utility is prohibited from recovering deferrals if the company is found to be earning in excess of its authorized equity return.

Generation capacity/generic infrastructure/other — At times, the PSC has authorized the utilities to file a limited issue reopener, or LIR, of a previously completed base rate case instead of a full rate case. The LIR provides for recognition of certain specified investments and/or expenses and does not involve the re-determination of rate of return.

Other — All utilities have mechanisms in place to recover variations in certain taxes and franchise fees.

Wyoming

Decoupling — Black Hills Gas Distribution has a partial decoupling mechanism in place for small and medium general service class distribution customers. The mechanism does not address revenue variations due to weather. Cheyenne Light Fuel and Power's, or CLF&P's, demand-side management, or DSM, mechanisms for its electric and gas operations include provisions that provide for the recovery of "lost margins" associated with customer participation in the DSM programs.

Renewables expense/environmental compliance — Optional renewable energy riders are in place for CLF&P, MDU Resources and PacifiCorp. PacifiCorp operates under an adjustment mechanism that is designed to recover from, or refund to, ratepayers 100% of the difference between actual renewable energy and SO2 emission allowance credit revenue levels and the levels reflected in base rates.

Other — Through an incentive provision of its fuel clause, CLF&P allocates a portion of off-system sales margins to ratepayers

ANNUAL REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934

For the fiscal year ended December 31, 2017

OR

TRANSITION REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934

For the transition period from _____ to _____

Commission file No. 1-13883

CALIFORNIA WATER SERVICE GROUP

(Exact name of registrant as specified in its charter)

Delaware
(State or Other Jurisdiction of
Incorporation or Organization)
1720 North First Street,
San Jose, California
(Address of Principal Executive Offices)

77-0448994
(I.R.S. Employer
Identification No.)

95112
(Zip Code)

(408) 367-8200

(Registrant's Telephone Number, including Area Code)

Securities registered pursuant to Section 12(b) of the Act:

Title of Each Class:

Common Stock, \$0.01 par value per share

Name of Each Exchange on Which Registered:

New York Stock Exchange

Securities registered pursuant to Section 12(g) of the Act: **None**

Indicate by check mark if the registrant is a well-known seasoned issuer, as defined in Rule 405 of the Securities Act. Yes No

Indicate by check mark if the registrant is not required to file reports pursuant to Section 13 or Section 15(d) of the Act. Yes No

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the Registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days. Yes No

Indicate by check mark whether the registrant has submitted electronically and posted on its corporate Web site, if any, every Interactive Data File required to be submitted and posted pursuant to Rule 405 of Regulation S-T (§ 232.405 of this chapter) during the preceding 12 months (or for such shorter period that the registrant was required to submit and post such files). Yes No

Indicate by check mark if disclosure of delinquent filers pursuant to Item 405 of Regulation S-K is not contained herein, and will not be contained, to the best of registrant's knowledge, in definitive proxy or information statements incorporated by reference in Part III of this Form 10-K or any amendment to this Form 10-K.

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, or a smaller reporting company or emerging growth company. See the definitions of "large accelerated filer," "accelerated filer," "smaller reporting company," and "emerging growth company" in Rule 12b-2 of the Exchange Act. (Check one):

Large accelerated filer

Accelerated filer

Non-accelerated filer
(Do not check if a
smaller reporting company)

Smaller reporting company
Emerging growth company

If an emerging growth company, indicate by check mark if the registrant has elected not to use the extended transition period for complying with any new or revised financial accounting standards provided pursuant to Section 13(a) of the Exchange Act.

Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Act). Yes No

The aggregate market value of the voting and non-voting common stock held by non-affiliates of the registrant was \$1,767 million on June 30, 2017, the last business day of the registrant's most recently completed second fiscal quarter. The valuation is based on the closing price of the registrant's common stock as traded on the New York Stock Exchange.

The Common stock outstanding at February 12, 2018 was 48,011,346 shares.

DOCUMENTS INCORPORATED BY REFERENCE

Portions of the definitive proxy statement for the California Water Service Group 2017 Annual Meeting are incorporated by reference into Part III

hereof.

PART I**Item 1. Business.****Forward-Looking Statements**

This annual report, including all documents incorporated by reference, contains forward-looking statements within the meaning established by the Private Securities Litigation Reform Act of 1995. Forward-looking statements in this annual report are based on currently available information, expectations, estimates, assumptions and projections, and our management's beliefs, assumptions, judgments and expectations about us, the water utility industry and general economic conditions. These statements are not statements of historical fact. When used in our documents, statements that are not historical in nature, including words like "expects," "intends," "plans," "believes," "may," "estimates," "assumes," "anticipates," "projects," "predicts," "forecasts," "should," "seeks," or variations of these words or similar expressions are intended to identify forward-looking statements. The forward-looking statements are not guarantees of future performance. They are based on numerous assumptions that we believe are reasonable, but they are open to a wide range of uncertainties and business risks. Consequently, actual results may vary materially from what is contained in a forward-looking statement.

Factors which may cause actual results to be different than those expected or anticipated include, but are not limited to:

- governmental and regulatory commissions' decisions, including decisions on proper disposition of property;
- consequences of eminent domain actions relating to our water systems;
- changes in regulatory commissions' policies and procedures;
- the timeliness of regulatory commissions' actions concerning rate relief;
- inability to renew leases to operate city water systems on beneficial terms;
- changes in California State Water Resources Control Board water quality standards;
- changes in environmental compliance and water quality requirements;
- electric power interruptions;
- housing and customer growth index;
- the impact of opposition to rate increases;
- our ability to recover costs;
- availability of water supplies;
- issues with the implementation, maintenance or security of our information technology systems;
- civil disturbances or terrorist threats or acts, or apprehension about the possible future occurrences of acts of this type;
- labor relations matters as we negotiate with the unions;
- restrictive covenants in or changes to the credit ratings on current or future debt that could increase financing costs or affect the ability to borrow, make payments on debt, or pay dividends;
- changes in customer water use patterns and the effects of conservation;
- the impact of weather, climate, natural disasters, and diseases on water quality, water availability, water sales and operating results;
- the risks set forth in "Risk Factors" included elsewhere in this annual report.

In light of these risks, uncertainties and assumptions, investors are cautioned not to place undue reliance on forward-looking statements, which speak only as of the date of this annual report or as of the date of any document incorporated by reference in this annual report, as applicable. When considering forward-looking statements, investors should keep in mind the cautionary statements in this annual report and the documents incorporated by reference. We are not under any obligation, and we expressly disclaim any obligation, to update or alter any forward-looking statements, whether as a result of new information, future events or otherwise.

[Table of Contents](#)**Overview**

California Water Service Group is a holding company incorporated in Delaware in 1999 with six operating subsidiaries: California Water Service Company (Cal Water), New Mexico Water Service Company (New Mexico Water), Washington Water Service Company (Washington Water), Hawaii Water Service Company, Inc. (Hawaii Water), and CWS Utility Services and HWS Utility Services LLC (CWS Utility Services and HWS Utility Services LLC being referred to collectively in this annual report as Utility Services). Cal Water, New Mexico Water, Washington Water, and Hawaii Water are regulated public utilities. The regulated utility entities also provide some non-regulated services. Utility Services provides non-regulated services to private companies and municipalities. Cal Water was the original operating company and began operations in 1926.

Our business is conducted through our operating subsidiaries and we provide utility services to approximately two million people. The bulk of the business consists of the production, purchase, storage, treatment, testing, distribution and sale of water for domestic, industrial, public and irrigation uses, and for fire protection. We also provide non-regulated water-related services under agreements with municipalities and other private companies. The non-regulated services include full water system operation, billing and meter reading services. Non-regulated operations also include the lease of communication antenna sites, lab services and promotion of other non-regulated services.

During the year ended December 31, 2017, there were no significant changes in the kind of products produced or services rendered by our operating subsidiaries, or in the markets or methods of distribution.

Our mailing address and contact information is:

California Water Service Group
1720 North First Street
San Jose, California 95112-4598
telephone number: 408-367-8200
www.calwatergroup.com

Annual reports on Form 10-K, quarterly reports on Form 10-Q, current reports on Form 8-K and amendments to these reports are available free of charge through our website. The reports are available on our website as soon as reasonably practicable after such reports are filed with the SEC.

Regulated Business

California water operations are conducted by the Cal Water and CWS Utility Services entities, which provide service to approximately 484,900 customer connections in approximately 100 California communities through 20 separate districts, which are subject to regulation by the California Public Utilities Commission (CPUC). Cal Water operates two leased water systems, the City of Hawthorne and the City of Commerce, which are governed through their respective city councils and are outside of the CPUC's jurisdiction. California water operations accounted for approximately 94.3% of our total customer connections and approximately 93.9% of our total consolidated operating revenue.

Hawaii Water provides service to approximately 4,500 water and wastewater customer connections on the islands of Maui and Hawaii, including several large resorts and condominium complexes. Hawaii Water's regulated customer connections are subject to the jurisdiction of the Hawaii Public Utilities Commission (HPUC). Hawaii Water accounts for 0.9% of our total customer connections and approximately 3.6% of our total consolidated operating revenue.

Washington Water provides domestic water service to approximately 16,800 customer connections in the Tacoma and Olympia areas. Washington Water's utility operations are regulated by the Washington Utilities and Transportation Commission. Washington Water accounts for approximately 3.3% of our total customer connections and approximately 1.8% of our total consolidated operating revenue.

New Mexico Water provides service to approximately 8,100 water and wastewater customer connections in the Belen, Los Lunas and Elephant Butte areas in New Mexico. New Mexico's regulated operations are subject to the jurisdiction of the New Mexico Public Regulation Commission. New Mexico Water accounts for approximately 1.6% of our total customer connections and 0.7% of our total consolidated operating revenue.

The state regulatory bodies governing our regulated operations are referred to as the Commissions in this annual report. Rates and operations for regulated customers are subject to the jurisdiction of the respective state's regulatory Commission. The Commissions require that water and wastewater rates for each regulated district be independently determined based on the cost of service, except in Washington, which has a statewide tariff. The Commissions are expected to authorize rates sufficient to recover normal operating expenses and allow the utility to earn a fair and reasonable return on invested capital.

[Table of Contents](#)

We distribute water in accordance with accepted water utility methods. Where applicable, we hold franchises and permits in the cities and communities where we operate. The franchises and permits allow us to operate and maintain facilities in public streets and right-of-ways as necessary.

We operate the City of Hawthorne and the City of Commerce water systems under lease agreements. In accordance with the lease agreements, we receive all revenues from operating the systems and are responsible for paying the operating costs. The City of Hawthorne and the City of Commerce lease revenues are governed through their respective city councils and are considered non-regulated because they are outside of the CPUC's jurisdiction. We report revenue and expenses for the City of Hawthorne and City of Commerce leases in operating revenue and operating expenses because we are entitled to retain all customer billings and are responsible for all operating expenses. These leases are considered "nontariffed products and services" (NTPS) by the CPUC and require a 10% revenue sharing with regulated customers.

In October 2011, an agreement was negotiated with the City of Hawthorne to lease and operate its water system. The system, which is located near the Hemosa Redondo district, serves about half of Hawthorne's population. The capital lease agreement required an up-front \$8.1 million lease deposit to the city that is being amortized over the lease term. Additionally, annual lease payments will be adjusted based on changes in rates charged to customers. Under the lease we are responsible for all aspects of system operation and capital improvements, although title to the system and system improvements reside with the city. Capital improvements are recorded as depreciable plant and equipment and depreciated per the asset lives set forth in the agreement. In exchange, we receive all revenue from the water system, which was \$10.0 million, \$8.5 million and \$8.0 million in 2017, 2016, and 2015, respectively. At the end of the lease, the city is required to reimburse us for the unamortized value of capital improvements made during the term of the lease. The City of Hawthorne capital lease is a 15-year lease and expires in 2026.

In July 2003, an agreement was negotiated with the City of Commerce to lease and operate its water system. The lease was a 15-year lease and expires in June 2018. In 2017, we bid to provide services after June 2018 and we expect the City of Commerce to release the results of the bidding process in 2018. Under the current agreement, the operating lease requires us to pay \$0.8 million per year in monthly installments and \$200 per acre-foot for water usage exceeding 2,000 acre-feet per year, plus a percentage of certain operational savings that may be realized. Under the lease agreement, we are responsible for all aspects of the system's operations. The city is responsible for capital expenditures, and title to the system and system improvements resides with the city. We bear the risks of operation and collection of amounts billed to customers. The agreement allows Cal Water to request a rate change in order to recover costs. In exchange, we receive all revenue from the water system, which was \$3.4 million, \$2.5 million, and \$2.0 million in 2017, 2016, and 2015, respectively.

Non-Regulated Activities

Fees for non-regulated activities are based on contracts negotiated between the parties. Under our non-regulated contract arrangements, we operate municipally owned water systems, privately owned water and recycled water distribution systems, but are not responsible for all operating costs. Non-regulated revenue received from water system operations is generally determined on a fee-per-customer basis.

Non-regulated revenue and expenses consist primarily of the operation of water systems that are owned by other entities under lease agreements, leasing of communication antenna sites on our properties, billing of optional third-party insurance programs to our residential customers, and unrealized gains or losses on benefit plan investments.

Effective June 30, 2011, the CPUC adopted new rules related to the provision of non-regulated services using utility assets and employees. As a result, nearly all California non-regulated activities are now considered NTPS. The prescribed accounting for these NTPS is incremental cost allocation plus revenue sharing with regulated customers. Non-regulated services determined to be "active activities" require a 10% revenue sharing, and "passive activities" require a 30% revenue sharing. The amount of non-regulated revenues subject to revenue sharing is the total billed revenues less any authorized pass-through costs. Some examples of CPUC authorized pass-through costs are purchased water, purchased power, and pump taxes. All of our non-regulated services, except for leasing communication antenna sites on our properties and unrealized gains or losses on benefit investments, are "active activities" subject to a 10% revenue sharing. Leasing communication antenna sites on our properties are "passive activities" subject to a 30% revenue sharing. Cal Water's annual revenue sharing with regulated customers was \$2.2 million, \$2.1 million, and \$2.2 million in 2017, 2016, and 2015, respectively.

Operating Segment

We operate in one reportable segment, the supply and distribution of water and providing water-related utility services. For information about revenue from external customers, net income and total assets, see "Item 8. Financial Statements and Supplementary Data."

[Table of Contents](#)**Growth**

We intend to continue exploring opportunities to expand our regulated and non-regulated water and wastewater activities in the western United States. The opportunities could include system acquisitions, lease arrangements similar to the City of Hawthorne and City of Commerce contracts, full service system operation and maintenance agreements, meter reading, billing contracts and other utility-related services.

Geographical Service Areas and Number of Customer Connections at Year-end

Our principal markets are users of water within our service areas. The approximate number of customer connections served in each regulated district, the City of Hawthorne and the City of Commerce, at December 31 is as follows:

| (rounded to the nearest hundred) | 2017 | 2016 |
|--|----------------|----------------|
| SAN FRANCISCO BAY AREA/NORTH COAST | | |
| Bay Area Region (serving South San Francisco, Colma, Broadmoor, San Mateo, San Carlos, Lucerne, Duncans Mills, Guerneville, Dillon Beach, Noel Heights and portions of Santa Rosa) | 55,700 | 55,500 |
| Bear Gulch (serving portions of Menlo Park, Atherton, Woodside and Portola Valley) | 18,900 | 18,900 |

Rates and Regulation

The Commissions have plenary powers setting both rates and operating standards. As such, the Commissions' decisions significantly impact the Company's revenues, earnings, and cash flows. The amounts discussed herein are generally annual amounts, unless otherwise stated, and the financial impact to recorded revenue is expected to occur over a 12-month period from the effective date of the decision. In California, water utilities are required to make several different types of filings. Certain filings, such as: General Rate Case (GRC) filings, escalation rate increase filings, and offset filings, may result in rate changes that generally remain in place until the next GRC. As explained below, surcharges and surcredits to recover balancing and memorandum accounts as well as GRC interim rate relief are temporary rate changes, which have specific time frames for recovery.

The CPUC follows a rate case plan, which requires Cal Water to file a GRC for each of its regulated operating districts every three years. In a GRC proceeding, the CPUC not only considers the utility's rate setting requests, but may also consider other issues that affect the utility's rates and operations. The CPUC is generally required to issue its GRC decision prior to the first day of the test year or authorize interim rates. In accordance with the rate case plan, Cal Water will file its next GRC application in July of 2018.

Between GRC filings, Cal Water may file escalation rate increases, which allow Cal Water to recover cost increases, primarily from inflation and incremental investments, during the second and third years of the rate case cycle. However, escalation rate increases are district specific and subject to an earnings test. The CPUC may reduce a district's escalation rate increase if, in the most recent 13-month period, the earnings test reflects earnings in excess of what was authorized for that district.

In addition, California water utilities are entitled to make offset requests via advice letter. Offsets may be requested to adjust revenues for construction projects authorized in GRCs when those capital projects go into service (these filings are referred to as "rate base offsets"), or for rate changes charged to Cal Water for purchased water, purchased power, and pump taxes (which are referred to as "expense offsets"). Rate changes approved in offset requests remain in effect until the next GRC is approved.

In pursuit of the CPUC's water conservation goals, the CPUC decoupled Cal Water's revenue requirement from customer consumption levels in 2008 by authorizing a Water Revenue Adjustment Mechanism (WRAM) and Modified Cost Balancing Account (MCBA) for each district. The WRAM and MCBA ensure that Cal Water recovers revenues authorized by the CPUC regardless of customer consumption. This removes the historical disincentive against promoting lower water usage among customers. Through an annual advice letter filing, Cal Water recovers any under-collected metered revenue amounts authorized, or refunds over-collected quantity revenues, via surcharges and surcredits. The advice letters are filed between February and April of each year and address the net WRAM and MCBA balances recorded for the previous calendar year. The majority of WRAM and MCBA balances are collected or refunded through surcharges/surcredits over 12 and 18 months. The WRAM and MCBA amounts are cumulative, so if they are not amortized in a given calendar year, the balance is carried forward and included with the following year balance. Cal Water has a Sales Reconciliation Mechanism (SRM) in place for the second and

[Table of Contents](#)

third years of a GRC that allow the company to adjust its adopted sales forecast if actual sales vary from adopted sales by more than 5.0% in the prior year. The SRM moderates the growth of the net WRAM and MCBA balance.

Regulatory Activity - California***2015 GRC filing***

On December 15, 2016, the CPUC voted to approve Cal Water's 2015 GRC settlement agreement. The approved decision, which was proposed by the presiding Administrative Law Judge in November 2016, authorizes Cal Water to increase gross revenue by approximately \$45.0 million starting on January 1, 2017, up to \$17.2 million in 2018, up to \$16.3 million in 2019, and up to \$30.0 million upon completion and approval of the Company's advice letter projects. The 2018 and 2019 revenue increases are subject to the CPUC's earning test protocol.

The CPUC's decision also authorizes Cal Water to invest \$658.8 million in water system improvements throughout California over the three-year period of 2016-2018 in order to continue to provide safe and reliable water to its customers. This figure includes \$197.3 million of water system infrastructure improvements that will be subject to the CPUC's advice letter procedure.

Cost of Capital Application

In April of 2017, Cal Water, along with three other water utilities, filed an application to adopt a new cost of capital and capital structure for 2018. Cal Water requested a return on equity of 10.75% and a 53.4% equity capital structure as well as a water cost of capital adjustment mechanism similar to that last adopted for the company. The California Office of Ratepayer Advocates and other parties submitted testimony and the CPUC held evidentiary hearings in September 2017.

On February 6, 2018, the CPUC issued the proposed decision of the assigned administrative law judge. The proposed decision would lower Cal Water's authorized return on equity from 9.43% to 8.22%. If the proposed decision were adopted without changes, Cal Water would be required to reduce its rates collected from California customers by approximately \$13.0 million, which will reduce Cal Water's 2018 net income and net cash provided by operating activities. A proposed decision must be approved by the full Commission to go into effect. The Commission could modify or reject the proposed decision and will first consider the matter at its meeting on March 22, 2018.

Escalation increase requests

As a part of the decision on the 2015 GRC, Cal Water was authorized to request annual escalation rate increases for 2018 for those districts that passed the earnings test. In November of 2017, Cal Water requested escalation rate increases in all of its regulated districts. The annual adopted gross revenue associated with the November 2017 filing was \$15.9 million. The new rates became effective on January 1, 2018.

Expense offset requests

Expense offsets are dollar-for-dollar increases in revenue to match increased expenses, and therefore do not affect net operating income. In October of 2016, Cal Water submitted advice letters to offset increases in purchased water costs and pump taxes in four of its regulated districts, totaling \$1.9 million. The new rates became effective on January 1, 2017.

In March of 2017, Cal Water submitted an advice letter to offset increased purchased water in one of its regulated districts, totaling \$1.0 million. The new rates became effective on April 15, 2017.

In June of 2017, Cal Water submitted advice letters to offset increased purchased water and pump taxes in four of its regulated districts, totaling \$2.7 million. The new rates became effective on July 1, 2017.

In July of 2017, Cal Water submitted an advice letter to offset increased purchased water and pump taxes in one of its regulated districts, totaling \$0.2 million. The new rates became effective on August 1, 2017.

In October of 2017, Cal Water submitted advice letters to request offsets for increases in purchased water costs and pump taxes in five of its regulated districts totaling \$2.2 million. The new rates became effective on January 1, 2018.

Rate base offset requests

For construction projects authorized in GRCs as advice letter projects, Cal Water is allowed to request rate base offsets to increase revenues after the project goes into service. In November of 2016, Cal Water submitted an advice letter to recover \$2.6 million of annual revenue increase for rate base offsets in five of its regulated districts. The new rates became effective on January 1, 2017.

[Table of Contents](#)

In April of 2017, Cal Water submitted advice letters to recover \$0.9 million of annual revenue increase for rate base offsets in two of its regulated districts. The new rates became effective on April 15, 2017.

In May of 2017, Cal Water submitted an advice letter to recover \$0.4 million of annual revenue increase for a rate base offset in one of its regulated districts. The new rates became effective on July 1, 2017.

In November of 2017, Cal Water submitted an advice letter to recover \$1.4 million of annual revenue increase for a rate base offset in one of its regulated districts. The new rates became effective on January 1, 2018.

WRAM/MCBA filings

In March of 2017, Cal Water submitted an advice letter to true up the revenue over- and under-collections in the 2016 annual WRAMs/MCBAs of its regulated districts. A net under-collection of \$25.8 million is being recovered from customers in the form of 12, 18, and greater-than-18-month surcharges/surcredits. The new rates became effective April 15, 2017. This surcharge/surcredit in some cases is in addition to surcharges/surcredits authorized in prior years which have not yet expired.

Drought Memorandum Account

The incremental costs tracked in the drought memorandum account for the twelve month period ended December 31, 2017 were \$0.2 million, of which less than \$0.1 million was spent on capital. For the twelve month period ended December 31, 2016, incremental costs were \$5.0 million, of which \$0.7 million was spent on capital.

On December 15, 2016, the CPUC approved a resolution to allow Cal Water to begin recovering \$2.9 million of incremental costs related to 2015 and 2014 through a surcharge which became effective on January 1, 2017.

In 2018, Cal Water expects to submit an advice letter to request recovery of 2016 and 2017 incremental drought expenses.

1,2,3 Trichloropropane (TCP) Memorandum Account

Established in December 2009, the TCP memorandum account tracks the costs incurred and proceeds received and applied with respect to litigation against manufacturers and distributors referred to as potentially responsible parties (PRPs) that manufactured and distributed products that contained TCP in California. Cal Water incurred incremental internal and external costs to support its litigation effort. The TCP memorandum account also tracks litigation awards and settlement proceeds. Finally, the TCP memorandum account will track the application of funds received towards remediation costs, including TCP water treatment expenses and the costs of investments in replacement and treatment property.

On December 20, 2017, Cal Water entered into an \$85.0 million settlement agreement and release of claims with the PRPs, in *California Water Service Company and City of Bakersfield v. The Dow Chemical Company, et al., Civil Case No. CIV-470999* (TCP Action). The TCP Action seeks damages and other relief related to the PRPs' alleged contamination of drinking water supply and water wells with the chemical TCP.

The proceeds from the settlement, after payment of the legal fees, was \$56.0 million and will be used to reimburse a portion of the capital costs associated with Cal Water's remediation efforts related to such alleged TCP contamination. Under the terms of the Agreement, the PRPs are released from all claims regarding 47 of the 57 total claimed wells, and Cal Water agrees to file a dismissal with prejudice of the TCP Action. The PRPs are also released from future claims regarding TCP contamination of any other wells, unless and until Cal Water has installed granular activated carbon filtration systems or other then-approved State treatment technology for TCP on, or replaced, 36 wells due to TCP contamination.

2018 Tax Accounting Memorandum Account (TAMA)

On December 22, 2017, the CPUC sent a letter to All Class A and B Water and Sewer Utilities on the subject of "Changes in Federal Tax Rates for 2018." The CPUC required Cal Water to establish a memo account to track the impact of the Tax Cuts and Jobs Act (TCJA) has on Cal Water. The TAMA will track the revenue requirement impact of the TCJA not otherwise reflected in rates from January 1, 2018 until the effective date of the revenue requirement changes adopted in Cal Water's next GRC. The Hawaii Water, Washington Water, and New Mexico Water Commissions have similar requirements to track the impact of the changes to the federal tax law.

School Lead Testing Memorandum Account (SLTMA)

In March of 2017, Cal Water submitted an advice letter that established the SLT MA, which gives Cal Water the opportunity to recover costs related to lead monitoring and testing required by the State Water Resources Control Board's Division of Drinking Water. The SLT MA will track all incremental expenses associated with lead testing conducted at the request of K-12 schools within Cal Water's service territory.

[Table of Contents](#)*Phase 1 Sites Reservoir Memorandum Account (PHASE 1 SITES MA)*

In July of 2017, Cal Water submitted an advice letter that established the PHASE 1 SITES MA, which gives Cal Water the opportunity to recover costs associated with participation in phase 1 of the proposed Sites Reservoir project, an off-stream project located on the west side of the Sacramento Valley. The PHASE 1 SITES MA will track amounts paid to the Sites Reservoir Authority for Phase 1 and is capped at \$1.0 million.

Travis Air Force Base

On September 29, 2016, Cal Water entered into a 50-year agreement with the U.S. Department of Defense to acquire the water distribution assets of, and to provide water utility service to, the Travis Air Force Base beginning in 2018. On May 31, 2017, Cal Water submitted an application to the CPUC seeking approval to provide water service to the base and to establish rates for its service.

The water system utilizes surface water treated at a water treatment plant and groundwater from five wells, and includes distribution piping, storage tanks, hydrants, and other appurtenances to serve about 15,280 active and reserve personnel and civilians on the 6,400-acre base. If approved, Cal Water will make initial capital improvements of about \$12.7 million, with an anticipated capital investment of about \$52.0 million over the 50-year term of the utility service contract.

Regulatory Activity - Other States*2016 Pukalani (Hawaii Water) GRC Filing*

In December of 2016, Hawaii water filed a GRC for its Pukalani wastewater system requesting an additional \$1.3 million in revenues on an annual basis. The application requested recovery for increases in operating expenses since the previous rate case as well as recovery of the balance of the cost of the wastewater treatment plant that was not approved to be included in customer rates in the previous rate case among other capital investments. On September 15, 2017, the HPUC issued a proposed decision authorizing an \$0.8 million increase in revenues on an annual basis. Pursuant to a settlement agreement between Hawaii Water and the Consumer Advocate, the revenue increase will be phased-in over 4 years (\$0.2 million per year). The first phase of the increase was effective on October 18, 2017.

2017 Waikoloa (Hawaii Water) GRC Filings

In December of 2017, Hawaii Water filed GRC applications requesting an additional \$3.8 million in revenues on an annual basis for its Waikoloa Village and Resort Systems with the HPUC. The GRCs seek recovery of capital investments in the Waikoloa Village and Waikoloa Resort Systems as well as increases in operating expenses since the previous rate case. If approved, the Company anticipates rates would become effective in the fourth quarter of 2018.

Water Supply

Our source of supply varies among our operating districts. Certain districts obtain all of their supply from wells; some districts purchase all of their supply from wholesale suppliers; and other districts obtain supply from a combination of wells and wholesale suppliers. A small portion of supply comes from surface sources and is processed through Company-owned water treatment plants. To the best of management's knowledge, we are meeting water quality, environmental, and other regulatory standards for all Company-owned systems.

Historically, approximately 46.5% of our annual water supply is pumped from wells. State groundwater management agencies operate differently in each state. Some of our wells extract ground water from water basins under state ordinances. These are adjudicated groundwater basins, in which a court has settled the dispute between landowners or other parties over how much annual groundwater can be extracted by each party. All of our adjudicated groundwater basins are located in the State of California. Our annual groundwater extraction from adjudicated groundwater basins approximates 6.8 billion gallons or 14.4% of our total annual water supply pumped from wells. Historically, we have extracted less than 100% of our annual adjudicated groundwater rights and have the right to carry forward up to 20% of the unused amount to the next annual period. All of our remaining wells extract ground water from managed or unmanaged water basins. There are no set limits for the ground water extracted from these water basins. Our annual groundwater extraction from managed groundwater basins approximates 28.0 billion gallons or 58.9% of our total annual water supply pumped from wells. Our annual groundwater extraction from unmanaged groundwater basins approximates 12.7 billion gallons or 26.7% of our total annual water supply pumped from wells. Most of the managed groundwater basins we extract water from have groundwater recharge facilities. We are required to pay well pump taxes to financially support these groundwater recharge facilities. Our well pump taxes for the 12 months ending December 31, 2017, 2016, and 2015 were \$13.9 million, \$11.3 million, and \$11.5 million, respectively. In 2014, the State of California enacted the Sustainable Groundwater Management Act of 2014. The law and its implementing regulations will require most basins to select a sustainability agency by

[Table of Contents](#)

2017, develop a sustainability plan by 2022, and show progress toward sustainability by 2027. We expect that in the future, groundwater will be produced mainly from managed and adjudicated basins.

California's normal weather pattern yields little precipitation between mid-spring and mid-fall. The Washington Water service areas receive precipitation in all seasons, with the heaviest amounts during the winter. New Mexico Water's rainfall is heaviest in the summer monsoon season. Hawaii Water receives precipitation throughout the year, with the largest amounts in the winter months. Water usage in all service areas is highest during the warm and dry summers and declines in the cool winter months. Rain and snow during the winter months in California replenish underground water aquifers and fill reservoirs, providing the water supply for subsequent delivery to customers. As of December 31, 2017, the State of California snowpack water content during the 2017-2018 water year is 67% of long-term averages (per the California Department of Water Resources, Northern Sierra Precipitation Accumulation report). The northern Sierra region is the most important for the state's urban water supplies. The central and southern portions of the Sierras also have recorded 26% and 31%, respectively, of long-term averages. In January of 2014, California's Governor Brown proclaimed a drought emergency and directed State officials to take all necessary actions to make water immediately available. On April 7, 2017, the Governor declared an end to the drought emergency in 54 of California's 58 counties. Two of Cal Water's districts remain under a declared drought; these were areas where groundwater was impacted by five years of drought conditions. Management believes that supply pumped from underground aquifers and purchased from wholesale suppliers will be adequate to meet customer demand during 2018 and beyond. Long-term water supply plans are developed for each of our districts to help assure an adequate water supply under various operating and supply conditions. Some districts have unique challenges in meeting water quality standards, but management believes that supplies will meet current standards using current treatment processes.

The following table shows the estimated quantity of water purchased and the percentage of purchased water to total water production in each California operating district that purchased water in 2017. Other than noted below, all other districts receive 100% of their water supply from wells.

| District | Water Purchased (MG) | Percentage of Total Water Production | Source of Purchased Supply |
|---|-----------------------------|---|---|
| SAN FRANCISCO BAY AREA/NORTH COAST | | | |
| Bay Area Region* | 6,731 | 100% | San Francisco Public Utilities Commission and Yolo County Flood Control & Water Conservation District |
| Bear Gulch | 3,355 | 90% | San Francisco Public Utilities Commission |
| Los Altos | 2,414 | 64% | Santa Clara Valley Water District |
| Livermore | 2,031 | 77% | Alameda County Flood Control and Water Conservation District, Zone 7 |
| SACRAMENTO VALLEY | | | |
| Oroville | 630 | 82% | Pacific Gas and Electric Co. and County of Butte |
| SAN JOAQUIN VALLEY | | | |
| Bakersfield | 9,937 | 49% | Kern County Water Agency and City of Bakersfield |
| Stockton | 6,623 | 87% | Stockton East Water District |
| LOS ANGELES AREA | | | |
| East Los Angeles | 1,458 | 32% | Central Basin Municipal Water District |
| Dominguez | 9,670 | 85% | West Basin Municipal Water District and City of Torrance |
| City of Commerce | 134 | 20% | Central Basin Municipal Water District |
| Hawthorne | 874 | 67% | West Basin Municipal Water District |
| Hermosa Redondo | 3,138 | 90% | West Basin Municipal Water District |
| Los Angeles County Region** | 5,791 | 97% | West Basin Municipal Water District and Antelope Valley-East Kern Water Agency |
| Westlake | 2,384 | 100% | Calleguas Municipal Water District and Oak Park Water Service |
| Kern River Valley | 44 | 17% | City of Bakersfield |

[Table of Contents](#)

MG = million gallons

* Bay Area Region includes Bayshore and Redwood Valley

** Los Angeles County Region includes Palos Verdes and Antelope Valley

The Bear Gulch district obtains a portion of its water supply from surface runoff from the local watershed. The Oroville district in the Sacramento Valley, the Bakersfield district in the San Joaquin Valley, and the Kern River Valley district in the Los Angeles Area purchase water from a surface supply. Surface sources are processed through our water treatment plants before being delivered to the distribution system. The Bakersfield district also purchases treated water as a component of its water supply.

The Chico, Marysville, Dixon, and Willows districts in the Sacramento Valley, the Monterey Region district in the Salinas Valley, and the Selma and Visalia districts in the San Joaquin Valley obtain their entire supply from wells.

Purchases for the Los Altos, Livermore, Oroville, Redwood Valley, Stockton, and Bakersfield districts are pursuant to long-term contracts expiring on various dates after 2017. The water supplies purchased for the Dominguez, East Los Angeles, Hermosa Redondo, Palos Verdes, and Westlake districts as well as the Hawthorne and Commerce systems are provided by public agencies pursuant to a statutory obligation of continued non-preferential service to purveyors within the agencies' boundaries. Purchases for the Bayshore and Bear Gulch districts are in accordance with long-term contracts with the San Francisco Public Utilities Commission (SFPUC) until June 30, 2034.

Management anticipates water supply contracts will be renewed as they expire though the price of wholesale water purchases is subject to pricing changes imposed by the various wholesalers.

Shown below are wholesaler price rates and increases that became effective in 2017 and estimated wholesaler price rates and percent changes for 2018. In 2017, several districts experienced purchased water rate increases, resulting in the filing of several purchased water offsets.

| District | Effective Month | 2017 | | 2018 | | |
|---------------------|-----------------|--------------------|----------------|-----------------|--------------------|----------------|
| | | Unit Cost | Percent Change | Effective Month | Unit Cost | Percent Change |
| Antelope | January | \$521.00 /af | 7.4 % | January | \$560.00 /af | 7.5 % |

af = acre foot;

ccf = hundred cubic feet;

yr = fixed annual cost;

mo = fixed monthly cost

[Table of Contents](#)

- (1) untreated water
- (2) wholesaler price changes occur every six months

We work with all local suppliers and agencies responsible for water supply to insure adequate, long-term supply for each system.

See Item 7, "Management's Discussion and Analysis of Financial Condition and Results of Operations—Water Supply" for more information on adequacy of supplies.

Seasonal Fluctuations

In California, our customers' consumption pattern of water varies with the weather, in terms of rainfall and temperature. In the WRAM and MCBA design, the CPUC considers the historical pattern in determining the adopted sales and production costs. With a majority of our sales being subject to the WRAM and production costs being covered by the MCBA, fluctuations in financial results have been minimized. However, cash flows from operations and short-term borrowings on our credit facilities can be significantly impacted by seasonal fluctuations including recovery of the WRAM and MCBA.

Our water business is seasonal in nature. Weather conditions can have a material effect on customer usage. Customer demand for water generally is lower during the cooler and rainy winter months. Demand increases in the spring when warmer weather returns and the rains end, and customer use more water for outdoor purposes, such as landscape irrigation. Warm temperatures during the generally dry summer months result in increased demand. Water usage declines during the fall as temperatures decrease and the rainy season begins. During years in which precipitation is especially heavy or extends beyond the spring into the early summer, customer demand can decrease from historic normal levels, generally due to reduced outdoor water usage. Likewise, an early start to the rainy season during the fall can cause a decline in customer usage. As a result, seasonality of water usage has a significant impact on our cash flows from operations and borrowing on our short-term facilities.

Utility Plant Construction

We have continually extended, enlarged, and replaced our facilities as required to meet increasing demands and to maintain the water systems. We obtain construction financing using funds from operations, short-term bank borrowings, long-term financing, advances for construction and contributions in aid of construction that are funded by developers. Advances for construction are cash deposits from developers for construction of water facilities or water facilities deeded from developers. These advances are generally refundable without interest over a period of 40 years in equal annual payment amounts. Contributions in aid of construction consist of nonrefundable cash deposits or facilities transferred from developers, primarily for fire protection and relocation projects. We cannot control the amounts received from developers. This amount fluctuates from year-to-year as the level of construction activity carried on by developers varies. This activity is impacted by the demand for housing, commercial development, and general business conditions, including interest rates.

See Item 7, "Management's Discussion and Analysis of Financial Condition and Results of Operations—Liquidity and Capital Resources" for additional information.

Energy Reliability

We continue to use power efficiently to minimize the power expenses passed on to our customers, and maintain backup power systems to continue water service to our customers if the power companies' supplies are interrupted. Many of our well sites are equipped with emergency electric generators designed to produce electricity to keep the wells operating during power outages. Storage tanks also provide customers with water during blackout periods.

Impact of Climate Change Legislation

Our operations depend on power provided by other public utilities and, in emergencies, power generated by our portable and fixed generators. If future legislation limits emissions from the power generation process, our cost of power may increase. Any increase in the cost of power will be passed along to our California customers through the MCBA or included in our cost of service paid by our customers as requested in our GRC filings.

We maintain a fleet of vehicles to provide service to our customers, including a number of heavy duty diesel vehicles that were retrofitted to meet California emission standards. If future legislation further impacts the cost to operate the fleet or the fleet acquisition cost in order to meet certain emission standards, it will increase our cost of service and our rate base. Any increase in fleet operating costs associated with meeting emission standards will be included in our cost of service paid by our customers as requested in our GRC filings. While recovery of these costs is not guaranteed, we would expect recovery in the regulatory process.

[Table of Contents](#)

Under the California Environmental Quality Act (CEQA), all capital projects of a certain type (primarily wells, tanks, major pipelines and treatment facilities) require mitigation of greenhouse gas emissions. The cost to prepare the CEQA documentation and permit will be included in our capital cost and added to our rate base, which will be requested to be paid for by our customers. Any increase in the operating cost of the facilities will also be included in our cost of service paid by our customers as requested in our GRC filings. While recovery of these costs is not guaranteed, we would expect recovery in the regulatory process.

Cap and trade regulations were implemented in 2012 with the goal of reducing emissions to 1990 levels by the year 2020. These regulations have not impacted water utilities at this time. In the future, if we are required to comply with these regulations, any increase in operating costs associated with meeting these standards will be included in our cost of service paid by our customers as requested in our GRC filings. While recovery of these costs is not guaranteed, we would expect recovery in the regulatory process.

Security at Company Facilities

Due to terrorism and other risks, we have heightened security at our facilities and have taken added precautions to protect our employees and the water delivered to customers. In 2002, federal legislation was enacted that resulted in new regulations concerning security of water facilities, including submitting vulnerability assessment studies to the federal government. We have complied with regulations issued by the Environmental Protection Agency (EPA) pursuant to federal legislation concerning vulnerability assessments and have made filings to the EPA as required. In addition, communication plans have been developed as a component of our procedures. While we do not make public comments on our security programs, we have been in contact with federal, state, and local law enforcement agencies to coordinate and improve our water delivery systems' security.

Quality of Water Supply

Our operating practices are designed to produce potable water in accordance with accepted water utility practices. Water entering the distribution systems from surface sources is treated in compliance with federal and state Safe Drinking Water Act (SDWA) standards. Most well supplies are chlorinated or chloraminated for disinfection. Water samples from each water system are analyzed on a regular, scheduled basis in compliance with regulatory requirements. We operate a state-certified water quality laboratory at the San Jose General Office that provides testing for most of our California operations. Certain tests in California are contracted with independent certified labs qualified under the Environmental Laboratory Accreditation Program. Local independent state certified labs provide water sample testing for the Washington, New Mexico and Hawaii operations.

In recent years, federal and state water quality regulations have resulted in increased water sampling requirements. The SDWA continues to be amended to address public health concerns. We monitor water quality standard changes and upgrade our treatment capabilities to maintain compliance with the various regulations.

Competition and Condemnation

Our principal operations are regulated by the Commission of each state. Under state laws, no privately owned public utility may compete within any service territory that we already serve without first obtaining a certificate of public convenience and necessity from the applicable Commission. Issuance of such a certificate would only be made upon finding that our service is deficient. To management's knowledge, no application to provide service to an area served by us has been made.

State law provides that whenever a public agency constructs facilities to extend a utility system into the service area of a privately owned public utility, such an act constitutes the taking of property and requires reimbursement to the utility for its loss. State statutes allow municipalities, water districts and other public agencies to own and operate water systems. These agencies are empowered to condemn properties already operated by privately owned public utilities. The agencies are also authorized to issue bonds, including revenue bonds, for the purpose of acquiring or constructing water systems. However, if a public agency were to acquire utility property by eminent domain action, the utility would be entitled to just compensation for its loss. In Washington, annexation was approved in February 2008 for property served by us on Orcas Island; however, we continue to serve the customers in the annexed area and do not expect the annexation to impact our operations. To management's knowledge, other than the Orcas Island property, no municipality, water district, or other public agency is contemplating or has any action pending to acquire or condemn any of our systems.

Environmental Matters

Our operations are subject to environmental regulation by various governmental authorities. Environmental health and safety programs have been designed to provide compliance with water discharge regulations, underground and aboveground fuel storage tank regulations, hazardous materials management plans, hazardous waste regulations, air quality permitting requirements,

[Table of Contents](#)

wastewater discharge limitations and employee safety issues related to hazardous materials. Also, we actively investigate alternative technologies for meeting environmental regulations and continue the traditional practices of meeting environmental regulations.

For a description of the material effects that compliance with environmental regulations may have on us, see Item 1A. "Risk Factors—Risks Related to Our Regulatory Environment." We expect environmental regulation to increase, resulting in higher operating costs in the future, and there can be no assurance that the Commissions would approve rate increases to enable us to recover these additional compliance costs.

Employees

At December 31, 2017, we had 1,176 employees, including 50 at Washington Water, 41 at Hawaii Water, and 17 at New Mexico Water. In California, most non-supervisory employees are represented by the Utility Workers Union of America, AFL-CIO, except certain engineering and laboratory employees who are represented by the International Federation of Professional and Technical Engineers, AFL-CIO.

At December 31, 2017, we had 750 union employees. In January 2015, we negotiated a six-year contract that included 2015, 2016, and 2017 wage increases with both of our unions of 3.25% and 2.75%, and 2.75%, respectively. Annual wage increases for 2018, 2019, and 2020 are estimated to be in the range from 2.5% to 3.25% based on current forecast inflation rates. The wage changes will fluctuate with the changes to the Consumer Price Index (CPI) for the Los Angeles area. In the event an annual wage increase is determined to be greater than 3.25% or less than 2.0%, either party may request to re-open negotiations for wages only. Such notice must be served on the other party no later than 60 days after the publication of such CPI data. The current agreement with the unions is effective through 2020. Management believes that it maintains good relationships with the unions.

Employees at Washington Water, New Mexico Water, and Hawaii Water are not represented by unions.

Executive Officers of the Registrant

| <u>Name</u> | <u>Positions and Offices with California Water Service Group</u> | <u>Age</u> |
|---------------------------|--|------------|
| Martin A. Kropelnicki (1) | President and Chief Executive Officer since September 1, 2013. Formerly, President and Chief Operating Officer (2012-2013), Chief Financial Officer and Treasurer (2006-2012), served as Chief Financial Officer of Power Light Corporation (2005-2006), Chief Financial Officer and Executive Vice President of Corporate Services of Hall Kinion and Associates (1997-2004), Deloitte & Touche Consulting (1996-1997), held various positions with Pacific Gas & Electric (1989-1996). | 51 |
| Thomas F. Smegal III (2) | Vice President, Chief Financial Officer and Treasurer since October 1, 2012. Formerly, Vice President, Regulatory Matters and Corporate Relations (2008-2012), Manager of Rates (2002-2008), Regulatory Analyst (1997-2002), served as Utilities Engineer at the California Public Utilities Commission (1990-1997). | 50 |
| Paul G. Townsley (2) | Vice President of Rates and Regulatory Matters since March 4, 2013. Formerly Divisional Vice President, Operations and Engineering for EPCOR Water USA (2012-2013), served as President of American Water Works Company subsidiaries in Arizona, New Mexico, and Hawaii (2007-2012), served as American Water Works Company's President, Western Region (2002-2007), held various other positions with Citizens Utilities Company (1982-2002). | 60 |
| Robert J. Kuta (2) | Vice President of Engineering effective April 15, 2015. Formerly Senior Vice President of Operations Management Services, Water, Environmental and Nuclear markets for CH2M Hill (2006 to 2015), served as Western Region Vice President of Service Delivery and President of Arizona American Water Company (2001 to 2005), and held various management positions at Citizens Water Resource Company, Chaparral City Water Company, and Spring Creek Utilities (1993 to 2001). | 53 |
| Michael B. Luu (2) | Vice President of Customer Service and Chief Information Officer effective January 1, 2017. Formerly Vice President of Customer Service and Information Technology (2013-2016), Acting California Water Service Company District Manager, Los Altos (2012-2013), Director of Information Technology (2008-2012), CIS Development Manager (2005-2008), held various other positions with California Water Service Company since 1999. | 38 |
| Timothy D. Treloar (2) | Vice President of Water Quality and Chief Utility Operations Officer effective January 1, 2017. Formerly Vice President of Operations and Water Quality (2013-2016), Director of Water Quality (2013), California Water Service Company District Manager, Bakersfield (2002-2013), Assistant District Manager (1997-2002), General Superintendent (1994-1997). | 60 |

| <u>Name</u> | <u>Positions and Offices with California Water Service Group</u> | <u>Age</u> |
|---------------------------|---|------------|
| Ronald D. Webb (2) | Vice President of Human Resources since August 11, 2014. Formerly Managing Director, Human Resources Partner for United Airlines (2006-2014), served as Vice President of Human Resources for Black & Decker Corporation (1995-2005), Human Resource Manager for General Electric Company (1990-1994), and held various labor relations positions for National Steel and Shipbuilding Company (1982-1989). | 61 |
| Lynne P. McGhee (2) | Vice President and General Counsel since January 1, 2015. Formerly Corporate Secretary (2007-2014), Associate Corporate Counsel (2003-2014), and served as a Commissioner legal advisor and staff counsel at the California Public Utilities Commission (1998-2003). | 53 |
| David B. Healey (2) | Vice President, Corporate Controller and Assistant Treasurer since January 1, 2015. Formerly Corporate Controller and Assistant Treasurer (2012-2014), Director of Financial Reporting (2009-2012), served as Subsidiary Controller for SunPower Corporation (2005-2009), Corporate Controller for Hall, Kinion & Associates, Inc. (1997-2005), held various other positions with Pacific Gas & Electric Company (1985-1997). | 61 |
| Shannon C. Dean (2) | Vice President of Corporate Communications & Community Affairs since January 1, 2015. Formerly Director of Corporate Communications (2000-2014), held various corporate communications, government and community relations for Dominguez Water Company (1991-1999). | 50 |
| Michelle R. Mortensen (2) | Corporate Secretary since January 1, 2015. Formerly Assistant Corporate Secretary (2014), Treasury Manager (2012-2013), Assistant to the Chief Financial Officer (2011), Regulatory Accounting Manager (2008-2010), held various accounting positions at Piller Data Systems (2006-2007), Hitachi Global Storage (2005), Abbot Laboratories (1998-2004), and Symantec (1998-2001). | 43 |
| Elissa Y. Ouyang (2) | Chief Procurement and Lead Continuous Improvement Officer since March 1, 2016. Formerly, Interim Procurement Director (2013-2016), Acting District Manager - Los Altos (2013), Interim Vice President of Information Technology (2012-2013), Director of Information Technology - Architecture and Security (2008-2012), Business Application Manager (2003-2007), Project Lead/Senior Developer (2001-2003), held various business consulting positions at KPMG Consulting/BearingPoint (1998-2001), and RR Donnelley (1996-1998). | 49 |
| Gerald A. Simon (2) | Chief Safety and Emergency Preparedness Officer since March 1, 2016. Formerly, Director of Safety and Emergency Services (2015), Emergency Services Manager (2014), Emergency Services Coordinator (2013), served as Fire Chief for Oakland, CA (2008-2011) and (1999-2004), Fire Chief for Fort Lauderdale, FL (2006-2007), Fire Chief for Union City, CA (2005-2006), Fire Chief for Santa Clara, CA (1993-1999) held various other positions at Santa Clara Fire Department (1976-1999), and Fire Services Consultant (1985-2015). | 63 |

- (1) Holds the same position with California Water Service Company, CWS Utility Services, Hawaii Water Service Company, Inc., and New Mexico Water Service Company; Chief Executive Officer of Washington Water Service Company.
- (2) Holds the same position with California Water Service Company, CWS Utility Services, Hawaii Water Service Company, Inc., New Mexico Water Service Company, and Washington Water Service Company.

Item 1A. Risk Factors.

If any of the following risks actually occur, our financial condition and results of operations could be materially and adversely affected.

Risks Related to Our Regulatory Environment

Our business is heavily regulated by state and federal regulatory agencies and our financial viability depends upon our ability to recover costs from our customers through rates that must be approved by state public utility commissions.

California Water Service Company, New Mexico Water Service Company, Washington Water Service Company and Hawaii Water Service Company, Inc., are regulated public utilities which provide water and water-related service to our customers. The rates that we charge our water customers are subject to the jurisdiction of the regulatory commissions in the states in which we operate. These Commissions may set water and water-related rates for each operating district independently because the systems are not interconnected. The Commissions authorize us to charge rates that they consider to be sufficient to recover normal operating

[Table of Contents](#)

expenses, to provide funds for adding new or replacing water infrastructure, and to allow us to earn what the Commissions consider to be a fair and reasonable return on invested capital.

Our revenues and consequently our ability to meet our financial objectives are dependent upon the rates we are authorized to charge our customers by the Commissions and our ability to recover our costs in these rates. Our management uses forecasts, models and estimates in order to set rates that will provide a fair and reasonable return on our invested capital. While our rates must be approved by the Commissions, no assurance can be given that our forecasts, models and estimates will be correct or that the Commissions will agree with our forecasts, models and estimates. If our rates are set too low, our revenues may be insufficient to cover our operating expenses, capital expenditure requirements and desired dividend levels.

We periodically file rate increase applications with the Commissions. The ensuing administrative and hearing process may be lengthy and costly. The decisions of the Commissions are beyond our control and we can provide no assurances that our rate increase requests will be granted by the Commissions. Even if approved, there is no guarantee that approval will be given in a timely manner or at a sufficient level to cover our expenses and provide a reasonable return on our investment. If the rate increase decisions are delayed, our earnings may be adversely affected.

Our evaluation of the probability of recovery of regulatory assets is subject to adjustment by regulatory agencies and any such adjustment could adversely affect our results of operations.

Regulatory decisions may also impact prospective revenues and earnings, affect the timing of the recognition of revenues and expenses and may overturn past decisions used in determining our revenues and expenses. Our management continually evaluates the anticipated recovery of regulatory assets and revenues subject to refund and provides for allowances and/or reserves as deemed necessary. Current accounting procedures allow us to defer certain costs if we believe it is probable that we will be allowed to recover those costs through future rate increases. If the Commissions determined that a portion of our assets were not recoverable in customer rates, we may suffer an asset impairment which would require a write down in such asset's valuation which would be recorded through operations.

If our assessment as to the probability of recovery through the ratemaking process is incorrect, the associated regulatory asset would be adjusted to reflect the change in our assessment or any regulatory disallowances. A change in our evaluation of the probability of recovery of regulatory assets or a regulatory disallowance of all or a portion of our cost could have a material adverse effect on our financial results.

Regulatory agencies may disagree with our valuation and characterization of certain of our assets.

If we determine that assets are no longer used or useful for utility operations, we may remove them from our rate base and subsequently sell those assets. If the Commissions disagree with our characterization, we could be subjected to penalties. Furthermore, there is a risk that the Commissions could determine that realized appreciation in property value should be awarded to customers rather than our stockholders.

Changes in laws, rules and policies of regulatory agencies can significantly affect our business.

Regulatory agencies may change their rules and policies for various reasons, including changes in the local political environment. In some states, regulators are elected by popular vote or are appointed by elected officials, and the results of elections may change the long-established rules and policies of an agency dramatically. For example, in 2001 regulation regarding recovery of increases in electrical rates changed in California. For over 20 years prior to 2001, the CPUC allowed recovery of electric rate increases under its operating rules. However, in 2003, the CPUC reinstated its policy to allow utilities to adjust their rates for rate changes by the power companies. The original decision by the CPUC to change its policy, as well as its subsequent decision to reinstate that policy, affected our business.

We rely on policies and regulations promulgated by the various state commissions in order to recover capital expenditures, maintain favorable treatment on gains from the sale of real property, offset certain production and operating costs, recover the cost of debt, maintain an optimal equity structure without over-leveraging, and have financial and operational flexibility to engage in non-regulated operations. If any of the Commissions with jurisdiction over us implements policies and regulations that do not allow us to accomplish some or all of the items listed above, our future operating results may be adversely affected.

In addition, legislatures may repeal, relax or tighten existing laws, or enact new laws that impact the regulatory agencies with jurisdiction over our business or affect our business directly. If changes in existing laws or the implementation of new laws limit our ability to accomplish some of our business objectives, our future operating results may be adversely affected.

We expect environmental health and safety regulation to increase, resulting in higher operating costs in the future.

Our water and wastewater services are governed by various federal and state environmental protection, health and safety laws and regulations. These provisions establish criteria for drinking water and for discharges of water, wastewater and airborne

[Table of Contents](#)

substances. The EPA promulgates numerous nationally applicable standards, including maximum contaminant levels (MCLs) for drinking water. We believe we are currently in compliance with all of the MCLs promulgated to date. Although we have a rigorous water quality assurance program in place, we cannot guarantee that we will continue to comply with all standards. If we violate any federal or state regulations or laws governing health and safety, we could be subject to substantial fines or otherwise sanctioned.

Environmental health and safety laws are complex and change frequently. They tend to become more stringent over time. As new or stricter standards are introduced, they could increase our operating costs. Although we would likely seek permission to recover these costs through rate increases, we can give no assurance that the Commissions would approve rate increases to enable us to recover these additional compliance costs.

We are required to test our water quality for certain chemicals and potential contaminants on a regular basis. If the test results indicate that our water exceeds allowable limits, we may be required either to commence treatment to remove the contaminant or to develop an alternate water source. Either of these results may be costly. Although we would likely seek permission to recover these through rate increases, there can be no assurance that the Commissions would approve rate increases to enable us to recover these additional compliance costs.

New and/or more stringent water quality regulations could increase our operating costs.

We are subject to water quality standards set by federal, state and local authorities that have the power to issue new regulations. Compliance with new regulations that are more stringent than current regulations could increase our operating costs.

On July 1, 2014, the California Department of Public Health (CDPH) changed the water quality standard for chromium-6 in our water supply. The new standard requires us to have 10 parts per billion or less of chromium-6 in our California water supply. The CPUC authorized a memorandum account in 2014 to track all costs associated with compliance with the new chromium-6 standard. Although we would likely seek permission to recover additional costs of compliance through rate increases, we can give no assurance that the CPUC would approve rate increases to enable us to recover these additional compliance costs.

Legislation regarding climate change may impact our operations.

Future legislation regarding climate change may restrict our operations or impose new costs on our business. Our operations depend on power provided by other public utilities and, in emergencies, power generated by our portable and fixed generators. If future legislation limits emissions from the power generation process, our cost of power may increase. Any increase in the cost of power will be passed along to our California customers through the MCBA or included in our cost of service paid by our customers as requested in our GRC filings. While recovery of these costs is not guaranteed, we would expect recovery in the regulatory process.

Starting January 1, 2010, under the California Environmental Quality Act (CEQA), all capital projects of a certain type (primarily wells, tanks, major pipelines and treatment facilities) will require mitigation of greenhouse gas emissions. The cost to prepare the CEQA documentation and permit will add an estimated ten thousand dollars to such capital projects. This cost will be included in our capital cost and added to our rate base, which will be requested to be paid for by our customers. Any increase in the operating cost of the facilities will also be included in our cost of service paid by our customers as requested in our GRC filings. While recovery of these costs is not guaranteed, we would expect recovery in the regulatory process.

Cap and trade regulations were implemented in 2012 with the goal of reducing emissions to 1990 levels by the year 2020. While recovery of these costs is not guaranteed, we would expect recovery in the regulatory process.

We are party to a toxic contamination lawsuit which could result in us paying damages not covered by insurance.

We have been and may be in the future, party to water contamination lawsuits, which may not be fully covered by insurance.

The number of environmental and product-related lawsuits against other water utilities have increased in frequency in recent years. If we are subject to additional environmental or product-related lawsuits, we might incur significant legal costs and it is uncertain whether we would be able to recover the legal costs from customers or other third parties. In addition, if current California law regarding CPUC's preemptive jurisdiction over regulated public utilities for claims about compliance with California Department of Health Services and United States EPA water quality standards changes, our legal exposure may be significantly increased.

Risks Related to Our Business Operations

Wastewater operations entail significant risks.

While wastewater collection and treatment is not presently a major component of our revenues, wastewater collection and treatment involve many risks associated with damage to the surrounding environment. If collection or treatment systems fail or do not operate properly, untreated or partially treated wastewater could discharge onto property or into nearby streams and rivers,

[Table of Contents](#)

causing property damage or injury to aquatic life, or even human life. Liabilities resulting from such damage could materially and adversely affect our results of operations and financial condition.

Demand for our water is subject to various factors and is affected by seasonal fluctuations.

Demand for our water during the warmer, dry months is generally greater than during cooler or rainy months due primarily to additional requirements for water in connection with irrigation systems, swimming pools, cooling systems and other outside water use. Throughout the year, and particularly during typically warmer months, demand will vary with temperature and rainfall levels. If temperatures during the typically warmer months are cooler than normal, or if there is more rainfall than normal, the demand for our water may decrease. Under the WRAM mechanism, lower water usage in our California operations impacts our cash flows in the year of usage, but results in higher cash flows in the following years.

In addition, governmental restrictions on water usage during drought conditions may result in a decreased demand for our water, even if our water reserves are sufficient to serve our customers during these drought conditions. The Commissions may not allow surcharges to collect lost revenues caused by customers' conservation during a drought. Regardless of whether we may surcharge our customers during a conservation period, they may use less water even after a drought has passed because of conservation patterns developed during the drought. Furthermore, our customers may wish to use recycled water as a substitute for potable water. If rights are granted to others to serve our customers recycled water, there will likely be a decrease in demand for our water.

Finally, changes in prevailing weather patterns due to climate change may affect customer demand. If increased ambient temperatures affect our service areas, water used for irrigation and cooling may increase. If rainfall patterns change, our customers may change their patterns of water use including the amount of outdoor irrigation and the type of landscape they install. Government agencies may also mandate changes to customer irrigation or landscape patterns in response to changes in weather and climate.

The adequacy of our water supplies depends upon a variety of factors beyond our control. Interruption in the water supply may adversely affect our earnings.

We depend on an adequate water supply to meet the present and future needs of our customers. Whether we have an adequate supply varies depending upon a variety of factors, many of which are partially or completely beyond our control, including:

- the amount of rainfall;
- the amount of water stored in reservoirs;
- underground water supply from which well water is pumped;
- availability from water wholesalers;
- changes in the amount of water used by our customers;
- water quality;
- legal limitations on water use such as rationing restrictions during a drought;
- changes in prevailing weather patterns and climate; and
- population growth.

We purchase our water supply from various governmental agencies and others. Water supply availability may be affected by weather conditions, funding and other political and environmental considerations. In addition, our ability to use surface water is subject to regulations regarding water quality and volume limitations. If new regulations are imposed or existing regulations are changed or given new interpretations, the availability of surface water may be materially reduced. A reduction in surface water could result in the need to procure more costly water from other sources, thereby increasing our water production costs and adversely affecting our operating results if not recovered in rates on a timely basis.

There is strong scientific consensus that human activity including carbon emissions is changing the chemical and thermodynamic characteristics of the atmosphere and the earth's overall climate. Because scientific efforts have been global in nature, and because climate modeling has not yet been predictive on a local scale, there is tremendous uncertainty over the timing, extent, and types of impacts global climate change may have in our service areas. In addition, studies of tree ring data show long periods of drought conditions have occurred in the historical record in California but prior to our operation. Thus, we include potential climate change risks in our water supply planning activities. We also periodically review the climate change plans of our wholesalers to determine whether alternative supplies may be necessary in the future. However, we can give no assurance that replacement water supplies will be available at a reasonable cost or a cost acceptable to our customers and Commissions.

[Table of Contents](#)

We have entered into long-term water supply agreements, which commit us to making certain minimum payments whether or not we purchase any water. Therefore, if demand is insufficient to use our required purchases we would have to pay for water we did not receive.

From time to time, we enter into water supply agreements with third parties and our business is dependent upon such agreements in order to meet regional demand. For example, we have entered into a water supply contract with the SFPUC that expires on June 30, 2034. We can give no assurance that the SFPUC, or any of the other parties from whom we purchase water, will renew our contracts upon expiration, or that we will not be subject to significant price increases under any such renewed contracts.

The parties from whom we purchase water maintain significant infrastructure and systems to deliver water to us. Maintenance of these facilities is beyond our control. If these facilities are not adequately maintained or if these parties otherwise default on their obligations to supply water to us, we may not have adequate water supplies to meet our customers' needs.

If we are unable to access adequate water supplies we may be unable to satisfy all customer demand, which could result in rationing. Rationing may have an adverse effect on cash flow from operations. We can make no guarantee that we will always have access to an adequate supply of water that will meet all required quality standards. Water shortages may affect us in a variety of ways. For example, shortages could:

- adversely affect our supply mix by causing us to rely on more expensive purchased water;
- adversely affect operating costs;
- increase the risk of contamination to our systems due to our inability to maintain sufficient pressure; and
- increase capital expenditures for building pipelines to connect to alternative sources of supply, new wells to replace those that are no longer in service or are otherwise inadequate to meet the needs of our customers and reservoirs and other facilities to conserve or reclaim water.

We may or may not be able to recover increased operating and construction costs on a timely basis, or at all, for our regulated systems through the ratemaking process. Although we can give no assurance, we may be able to recover certain of these costs from third parties that may be responsible, or potentially responsible, for groundwater contamination.

Changes in water supply costs impact our operations.

The cost to obtain water for delivery to our customers varies depending on the sources of supply, wholesale suppliers' prices, the quality of water required to be treated and the quantity of water produced to fulfill customer water demand. Our source of supply varies among our operating districts. Certain districts obtain all of their supply from wells; some districts purchase all of the supply from wholesale suppliers; and other districts obtain the supply from a combination of wells and wholesale suppliers. A small portion of supply comes from surface sources and is processed through Company-owned water treatment plants. On average, slightly more than half of the water we deliver to our customers is pumped from wells or received from a surface supply with the remainder purchased from wholesale suppliers. Water purchased from suppliers usually costs us more than surface supplied or well pumped water. The cost of purchased water for delivery to customers represented 34.8% and 34.0% of our total operating costs in 2017 and 2016, respectively. Water purchased from suppliers will require renewal of our contracts upon expiration and may result in significant price increases under any such renewed contracts.

Wholesale water suppliers may increase their prices for water delivered to us based on factors that affect their operating costs. Purchased water rate increases are beyond our control. In California, effective July 1, 2008, our ability to recover increases in the cost of purchased water changed with the adoption of the MCBA. With this change, actual purchased water costs are compared to authorized purchased water costs, with variances netted against the variances in purchased power, pump tax, and metered revenue, being recorded to revenue. The balance in the MCBA will be collected in the future by billing the net WRAM and MCBA accounts receivable balances over 12, 18, and 18+ month periods, which may have a short-term negative impact on cash flow.

Dependency upon adequate supply of electricity and certain chemicals could adversely affect our results of operations.

Purchased electrical power is required to operate the wells and pumps needed to supply water to our customers. Although there are back-up power generators to operate a number of wells and pumps in emergencies, an extended interruption in power could impact the ability to supply water. In the past, California has been subject to rolling power blackouts due to insufficient power supplies. There is no assurance we will not be subject to power blackouts in the future. Additionally, we require sufficient amounts of certain chemicals in order to treat the water we supply. There are multiple sources for these chemicals but an extended interruption of supply could adversely affect our ability to adequately treat our water.

Purchased power is a significant operating expense. During 2017 and 2016, purchased power expense represented 5.0% and 5.1%, respectively, of our total operating costs. These costs are beyond our control and can change unpredictably and substantially

[Table of Contents](#)

as occurred in California during 2001 when rates paid for electricity increased 48%. As with purchased water, purchased power costs are included in the MCBA. Cash flows between rate filings may be adversely affected until the Commission authorizes a rate change, but earnings will be minimally impacted. Cost of chemicals used in the delivery of water is not an element of the MCBA, and therefore, variances in quantity or cost could impact the results of operations.

Our business requires significant capital expenditures to replace or improve aging infrastructure that are dependent on our ability to secure appropriate funding. If we are unable to obtain sufficient capital or if the rates at which we borrow increase, there would be a negative impact on our results of operations.

The water utility business is capital-intensive. We invest significant funds to replace or improve aging infrastructure such as property, plant and equipment. In addition, water shortages may adversely affect us by causing us to rely on more purchased water. This could cause increases in capital expenditures needed to build pipelines to secure alternative water sources. In addition, we require capital to grow our business through acquisitions. We fund our short-term capital requirements from cash received from operations and funds received from developers. We also borrow funds from banks under short-term bank lending arrangements. We seek to meet our long-term capital needs by raising equity through common or preferred stock issues or issuing debt obligations. We cannot give any assurance that these sources will continue to be adequate or that the cost of funds will remain at levels permitting us to earn a reasonable rate of return. In the event we are unable to obtain sufficient capital, our expansion efforts could be curtailed, which may affect our growth and may affect our future results of operations.

Our ability to access the capital markets is affected by the ratings of certain of our debt securities. Standard & Poor's Rating Agency issues a rating on California Water Service Company's ability to repay certain debt obligations. The credit rating agency could downgrade our credit rating based on reviews of our financial performance and projections or upon the occurrence of other events that could impact our business outlook. Lower ratings by the agency could restrict our ability to access equity and debt capital. We can give no assurance that the rating agency will maintain ratings which allow us to borrow under advantageous conditions and at reasonable interest rates. A future downgrade by the agency could also increase our cost of capital by causing potential investors to require a higher interest rate due to a perceived risk related to our ability to repay outstanding debt obligations.

While the majority of our debt is long term at fixed rates, we do have interest rate exposure in our short-term borrowings which have variable interest rates. We are also subject to interest rate risks on new financings. However, if interest rates were to increase on a long-term basis, our management believes that customer rates would increase accordingly, subject to approval by the appropriate commission. We can give no assurance that the Commission would approve such an increase in customer rates.

We are obligated to comply with specified debt covenants under certain of our loan and debt agreements. Failure to maintain compliance with these covenants could limit future borrowing, and we could face increased borrowing costs, litigation, acceleration of maturity schedules, and cross default issues. Such actions by our creditors could have a material adverse effect on our financial condition and results of operations.

Our inability to access the capital or financial markets could affect our ability to meet our liquidity needs at reasonable cost and our ability to meet long-term commitments. Changes in economic conditions in our markets could affect our customers' ability to pay for water services. Any of these could adversely affect our results of operations, cash flows and financial condition.

We rely on our current credit facilities to fund short-term liquidity needs if internal funds are not available from operations. Specifically, given the seasonal fluctuations in demand for our water we commonly draw on our credit facilities to meet our cash requirements at times in the year when demand is relatively low. We also may occasionally use letters of credit issued under our revolving credit facilities. Disruptions in the capital and credit markets could adversely affect our ability to draw on our credit facilities. Our access to funds under our credit facilities is dependent on the ability of our banks to meet their funding commitments.

Many of our customers and suppliers also have exposure to risks that could affect their ability to meet payment and supply commitments. We operate in geographic areas that may be particularly susceptible to declines in the price of real property, which could result in significant declines in demand for our products and services. In the event that any of our significant customers or suppliers, or a significant number of smaller customers and suppliers, are adversely affected by these risks, we may face disruptions in supply, significant reductions in demand for our products and services, inability of customers to pay invoices when due, and other adverse effects that could negatively affect our financial condition, results of operations and/or cash flows.

Our operations and certain contracts for water distribution and treatment depend on the financial capability of state and local governments, and other municipal entities such as water districts. Major disruptions in the financial strength or operations of such entities, such as liquidity limitations, bankruptcy or insolvency, could have an adverse effect on our ability to conduct our business and/or enforce our rights under contracts to which such entities are a party.

[Table of Contents](#)

We are a holding company that depends on cash flow from our subsidiaries to meet our obligations and to pay dividends on our common stock.

As a holding company, we conduct substantially all of our operations through our subsidiaries and our only significant assets are investments in those subsidiaries. 93.9% of our revenues are derived from the operations of California Water Service Company. As a result, we are dependent on cash flow from our subsidiaries, and California Water Service Company in particular, to meet our obligations and to pay dividends on our common stock.

Our subsidiaries are separate and distinct legal entities and generally have no obligation to pay any amounts due on California Water Service Group's debt or to provide California Water Service Group with funds for dividends. Although there are no contractual or regulatory restrictions on the ability of our subsidiaries to transfer funds to us, the reasonableness of our capital structure is one of the factors considered by state and local regulatory agencies in their ratemaking determinations. Therefore, transfer of funds from our subsidiaries to us for the payment of our obligations or dividends may have an adverse effect on ratemaking determinations. Furthermore, our right to receive cash or other assets upon the liquidation or reorganization of a subsidiary is generally subject to the prior claims of creditors of that subsidiary. If we are unable to obtain funds from our subsidiaries in a timely manner, we may be unable to meet our obligations or pay dividends.

We can make dividend payments only from our surplus (the excess, if any, of our net assets over total paid-in capital) or if there is no surplus, the net profits for the current fiscal year or the fiscal year before which the dividend is declared. In addition, we can pay cash dividends only if after paying those dividends we would be able to pay our liabilities as they become due. Owners of our capital stock cannot force us to pay dividends and dividends will only be paid if and when declared by our board of directors. Our board of directors can elect at any time, and for an indefinite duration, not to declare dividends on our capital stock.

An important element of our growth strategy is the acquisition of water and wastewater systems. Risks associated with potential acquisitions, divestitures or restructurings may adversely affect us.

We may seek to acquire or invest in other companies, technologies, services or products that complement our business. The execution of our growth strategy may expose us to different risks than those associated with our utility operations. We can give no assurance that we will succeed in finding attractive acquisition candidates or investments, or that we would be able to reach mutually agreeable terms with such parties. In addition, as consolidation becomes more prevalent in the water and wastewater industries, the prices for suitable acquisition candidates may increase to unacceptable levels and limit our ability to grow through acquisitions. If we are unable to find acquisition candidates or investments, our ability to grow may be limited.

Acquisition and investment transactions may result in the issuance of our equity securities that could be dilutive if the acquisition or business opportunity does not develop in accordance with our business plan. They may also result in significant write-offs and an increase in our debt. The occurrence of any of these events could have a material adverse effect on our business, financial condition and results of operations.

Any of these transactions could involve numerous additional risks, including one or more of the following:

- problems integrating the acquired operations, personnel, technologies or products with our existing businesses and products;
- liabilities inherited from the acquired companies' prior business operations;
- diversion of management time and attention from our core business to the acquired business;
- failure to retain key technical, management, sales and other personnel of the acquired business;
- difficulty in retaining relationships with suppliers and customers of the acquired business; and
- difficulty in getting required regulatory approvals.

In addition, the businesses and other assets we acquire may not achieve the sales and profitability expected. The occurrence of one or more of these events may have a material adverse effect on our business. There can be no assurance that we will be successful in overcoming these or any other significant risks encountered.

We may not be able to increase or sustain our recent growth rate, and we may not be able to manage our future growth effectively.

We may be unable to continue to expand our business or manage future growth. To successfully manage our growth and handle the responsibilities of being a public company, we must effectively:

- hire, train, integrate and manage additional qualified engineers for engineering design and construction activities, new business personnel, and financial and information technology personnel;

[Table of Contents](#)

- retain key management, augment our management team, and retain qualified and certified water and wastewater system operators;
- implement and improve additional and existing administrative, financial and operations systems, procedures and controls;
- expand our technological capabilities; and
- manage multiple relationships with our customers, regulators, suppliers and other third parties.

If we are unable to manage our growth effectively, we may not be able to take advantage of market opportunities, satisfy customer requirements, execute our business plan or respond to competitive pressures.

We have a number of large-volume commercial and industrial customers and a significant decrease in consumption by one or more of these customers could have an adverse effect on our operating results and cash flows.

Our billed revenues and cash flows from operations will decrease if a significant business or industrial customer terminates or materially reduces its use of our water. Approximately \$161.7 million, or 24.3%, of our 2017 water utility revenues was derived from business and industrial customers. However, if any of our large business or industrial customers in California reduce or cease its consumption of our water, the impact to net operating income would be minimal to our operations due to the WRAM and MCBA, but could impact our cash flows. In Hawaii, we serve a number of large resorts which if their water usage was reduced or ceased could have a material impact to our Hawaii operation. The delay between such date and the effective date of the rate relief may be significant and could adversely affect our operating results and cash flows.

Our operating cost and costs of providing services may rise faster than our revenues.

Our ability to increase rates over time is dependent upon approval of such rate increases by the Commissions, or in the case of the City of Hawthorne and the City of Commerce, the City Council, which may be inclined, for political or other reasons, to limit rate increases. However, our costs, which are subject to market conditions and other factors, may increase significantly. The second largest component of our operating costs after water production is made up of salaries and wages. These costs are affected by the local supply and demand for qualified labor. Other large components of our costs are general insurance, workers compensation insurance, employee benefits and health insurance costs. These costs may increase disproportionately to rate increases authorized by the Commissions and may have a material adverse effect on our future results of operations.

Demand for our stock may fluctuate due to circumstances beyond our control.

We believe that stockholders invest in public utility stocks, in part, because they seek reliable dividend payments. If there is an over-supply of stock of public utilities in the market relative to demand by such investors, the trading price of our securities could decrease. Additionally, if interest rates rise above the dividend yield offered by our equity securities, demand for our stock, and consequently its market price, may also decrease. A decline in demand for our stock may have a negative impact on our ability to finance capital projects.

Adverse investment returns and other factors may increase our pension liability and pension funding requirements.

A substantial number of our employees are covered by a defined benefit pension plan. At present, the pension plan is underfunded because our projected pension benefit obligation exceeds the aggregate fair value of plan assets. Under applicable law, we are required to make cash contributions to the extent necessary to comply with minimum funding levels imposed by regulatory requirements. The amount of such required cash contribution is based on an actuarial valuation of the plan. The funded status of the plan can be affected by investment returns on plan assets, discount rates, mortality rates of plan participants, pension reform legislation and a number of other factors. There can be no assurance that the value of our pension plan assets will be sufficient to cover future liabilities. Although we have made contributions to our pension plan in recent years, it is possible that we could incur a pension liability adjustment, or could be required to make additional cash contributions to our pension plan, which would reduce the cash available for business and other needs.

Labor relations matters could adversely affect our operating results.

At December 31, 2017, 750 of our 1,176 total employees were union employees. Most of our unionized employees are represented by the Utility Workers Union of America, AFL-CIO, except certain engineering and laboratory employees who are represented by the International Federation of Professional and Technical Engineers, AFL-CIO.

We believe our labor relations are good, but in light of rising costs for health care and pensions, contract negotiations in the future may be difficult. Furthermore, changes in applicable law or regulations could have an adverse effect on management's negotiating position with respect to our currently unionized employees and/or employees that decide to unionize in the future. We are subject to a risk of work stoppages and other labor relations matters as we negotiate with the unions to address these issues,

[Table of Contents](#)

which could affect our results of operations and financial condition. We can give no assurance that issues with our labor forces will be resolved favorably to us in the future or that we will not experience work stoppages.

We depend significantly on the services of the members of our management team, and the departure of any of those persons could cause our operating results to suffer.

Our success depends significantly on the continued individual and collective contributions of our management team. The loss of the services of any member of our management team could have an adverse effect on our business as our management team has knowledge of our industry and customers and would be difficult to replace.

Our operations are geographically concentrated in California and this lack of diversification may negatively impact our operations.

Although we own facilities in a number of states, over 93.9% of our operations are located in California. As a result, we are largely subject to weather, political, water supply, labor, energy cost, regulatory and economic risks affecting California.

We are also affected by the real property market in California. In order to grow our business, we may need to acquire additional real estate or rights to use real property owned by third parties, the cost of which tends to be higher and more volatile in California than in other states. The value of our assets in California may decline if there is a decline in the California real estate market which results in a significant decrease in real property values.

The effects of natural disasters, terrorist activity, pandemics, or poor water quality or contamination to our water supply may result in disruption in our services and litigation which could adversely affect our business, operating results and financial condition.

We operate in areas that are prone to earthquakes, fires, mudslides and other natural disasters. A significant seismic event or other natural disaster in California where our operations are concentrated could adversely impact our ability to deliver water and adversely affect our costs of operations. A major disaster could damage or destroy substantial capital assets. The CPUC has historically allowed utilities to establish a catastrophic event memorandum account as another possible mechanism to recover costs. However, we can give no assurance that the CPUC or any other commission would allow any such cost recovery mechanism in the future.

Our water supplies are subject to contamination, including contamination from the development of naturally-occurring compounds, chemicals in groundwater systems, pollution resulting from man-made sources, such as MTBE, sea water incursion and possible terrorist attacks. If our water supply is contaminated, we may have to interrupt the use of that water supply until we are able to substitute the flow of water from an uncontaminated water source. In addition, we may incur significant costs in order to treat the contaminated source through expansion of our current treatment facilities, or development of new treatment methods. If we are unable to substitute water supply from an uncontaminated water source, or to adequately treat the contaminated water source in a cost-effective manner, there may be an adverse effect on our revenues, operating results and financial condition. The costs we incur to decontaminate a water source or an underground water system could be significant and may not be recoverable in rates. We could also be held liable for consequences arising out of human exposure to hazardous substances in our water supplies or other environmental damage. For example, private plaintiffs have the right to bring personal injury or other toxic tort claims arising from the presence of hazardous substances in our drinking water supplies. Our insurance policies may not be sufficient to cover the costs of these claims.

We operate a dam. If the dam were to fail for any reason, we would lose a water supply and flooding likely would occur. Whether or not we were responsible for the dam's failure, we could be sued. We can give no assurance that we would be able to successfully defend such a suit.

In light of the threats to the nation's health and security ensuing in the wake of the September 11, 2001 terrorist attacks, we have taken steps to increase security measures at our facilities and heighten employee awareness of threats to our water supply. We have also tightened our security measures regarding the delivery and handling of certain chemicals used in our business. We have and will continue to bear increased costs for security precautions to protect our facilities, operations and supplies. These costs may be significant. Despite these tightened security measures, we may not be in a position to control the outcome of terrorist events should they occur.

We depend upon our skilled and trained workforce to ensure water delivery. Were a pandemic to occur, we can give no assurance that we would be able to maintain sufficient manpower to ensure uninterrupted service in all of the districts that we serve.

[Table of Contents](#)***We retain certain risks not covered by our insurance policies.***

We evaluate our risks and insurance coverage annually. Our evaluation considers the costs, risks and benefits of retaining versus insuring various risks as well as the availability of certain types of insurance coverage. Furthermore, we are also affected by increases in prices for insurance coverage; in particular, we have been, and will continue to be, affected by rising health insurance costs. Retained risks are associated with deductible limits, partial self-insurance programs and insurance policy coverage ceilings. If we suffer an uninsured loss, we may be unable to pass all, or any portion, of the loss on to customers because our rates are regulated by regulatory commissions. Consequently, uninsured losses may negatively affect our financial condition, liquidity and results of operations. There can be no assurance that we will not face uninsured losses pertaining to the risks we have retained.

We rely on our information technology ("IT") and a number of complex business systems to assist with the management of our business and customer and supplier relationships, and a disruption of these systems could adversely affect our business.

Our IT systems are an integral part of our business, and a serious disruption of our IT systems could significantly limit our ability to manage and operate our business efficiently, which, in turn, could cause our business and competitive position to suffer and adversely affect our results of operations. We depend on our IT systems to bill customers, process orders, provide customer service, manage construction projects, manage our financial records, track assets, remotely monitor certain of our plants and facilities and manage human resources, inventory and accounts receivable collections. Our IT systems also enable us to purchase products from our suppliers and bill customers on a timely basis, maintain cost-effective operations and provide service to our customers. Some of our mission and business critical IT systems are older, such as our SCADA (Supervisory Control and Data Acquisition) system. Although we do not believe that our IT systems are at a materially greater risk of cyber security incidents than other similar organizations, our IT systems remain vulnerable to damage or interruption from:

- power loss, computer systems failures, and internet, telecommunications or data network failures;
- operator negligence or improper operation by, or supervision of, employees;
- physical and electronic loss of customer data due to security breaches, cyber attacks, misappropriation and similar events;
- computer viruses;
- intentional security breaches, hacking, denial of services actions, misappropriation of data and similar events; and
- earthquakes, floods, fires, mudslides and other natural disasters.

These events may result in physical and/or electronic loss of customer or financial data, security breaches, misappropriation and other adverse consequences. In addition, the lack of redundancy for certain of our IT systems, including billing systems, could exacerbate the impact of any of these events on us.

In addition, we may not be successful in developing or acquiring technology that is competitive and responsive to the needs of our business, and we might lack sufficient resources to make the necessary upgrades or replacements of our outdated existing technology to allow us to continue to operate at our current level of efficiency.

The accuracy of our judgments and estimates about financial and accounting matters will impact our operating results and financial condition.

We make certain estimates and judgments in preparing our financial statements regarding, among others:

- the useful life of intangible rights;
- the number of years to depreciate certain assets;
- amounts to set aside for uncollectible accounts receivable, inventory obsolescence and uninsured losses;
- our legal exposure and the appropriate accrual for claims, including medical claims and workers' compensation claims;
- future costs and assumptions for pensions and other postretirement benefits;
- regulatory recovery of regulatory assets;
- possible tax uncertainties; and
- projected collections of WRAM and MCBA receivables.

The quality and accuracy of those estimates and judgments will have an impact on our operating results and financial condition.

[Table of Contents](#)

In addition, we must estimate unbilled revenues and costs as of the end of each accounting period. If our estimates are not accurate, we will be required to make an adjustment in a future period. Accounting rules permit us to use expense balancing accounts and memorandum accounts that include cost changes to us that are different from amounts incorporated into the rates approved by the Commissions. These accounts result in expenses and revenues being recognized in periods other than in which they occurred.

Municipalities, water districts and other public agencies may condemn our property by eminent domain action.

State statutes allow municipalities, water districts and other public agencies to own and operate water systems. These agencies are empowered to condemn water systems or real property owned by privately owned public utilities in certain circumstances and in compliance with California and federal law. Additionally, whenever a public agency constructs facilities to extend its utility system into the service area of a privately owned public utility, such an act may constitute the taking of property and require reimbursement to the public utility for its loss. If a public agency were to file an eminent domain lawsuit against us, we would incur substantial attorney's fees, consultant and expert fees and other costs in considering a challenge to the right to take our utility property and/or its valuation for just compensation, as well as such fees and costs in any subsequent litigation if necessary. If the public agency prevailed and acquired our utility property, we would be entitled to just compensation for our loss, but we would no longer have access to the condemned property or water system. Neither would we be entitled to any portion of revenue generated from the use of such asset going forward.

Item 1B. *Unresolved Staff Comments.*

None.

Item 2. *Properties.*

Our physical properties consist of offices and water facilities to accomplish the production, storage, treatment, and distribution of water. These properties are located in or near the geographic service areas listed above in Item 1, "Business—Geographical Service Areas and Number of Customer Connections at Year-end." Our headquarters, which houses accounting, engineering, information systems, human resources, purchasing, regulatory, water quality, and executive staff, is located in San Jose, California.

The real properties owned are held in fee simple title. Properties owned by Cal Water are subject to the lien of an Indenture of Mortgage and Deed of Trust dated March 16, 2016, October 13, 2015, November 17, 2010, and April 17, 2009 (the California Indenture), securing Cal Water's First Mortgage Bonds, of which \$521.4 million was outstanding at December 31, 2017. The California Indenture contains certain restrictions common to such types of instruments regarding the disposition of property and includes various covenants and restrictions. At December 31, 2017, our California utility was in compliance with the covenants of the California Indenture.

Cal Water owns 602 wells and operates ten leased wells. There are 444 owned storage tanks with a capacity of 278 million gallons, two leased storage tanks with a capacity of 0.4 million gallons, 30 managed storage tanks with a capacity of 32.4 million gallons, and three surface water reservoirs with a capacity of 220 million gallons. Cal Water owns and operates six surface water treatment plants with a combined capacity of 46 million gallons per day. There are 5,834 miles of supply and distribution mains in the various systems.

Hawaii Water owns 22 wells and manages two irrigation wells. There are 24 storage tanks with a storage capacity of 20.1 million gallons. There are 70 miles of supply and distribution lines. Hawaii Water operates five wastewater treatment facilities with a combined capacity to process approximately 1.8 million gallons per day. There are 26 miles of sewer collection mains.

Washington Water owns 350 wells and manages 57 wells. There are 137 owned storage tanks and 18 managed storage tanks with a storage capacity of 9.5 million gallons. There are 405 miles of supply and distribution lines.

New Mexico Water owns 19 wells. There are 17 storage tanks with a storage capacity of 4.3 million gallons. There are 145 miles of supply and distribution lines. New Mexico operates two waste water treatment facilities with a combined capacity to process 0.6 million gallons per day. There are 34 miles of sewer collection mains.

Washington Water has long-term bank loans that are secured primarily by utility plant owned by Washington Water.

In the leased City of Hawthorne and City of Commerce systems or in systems that are operated under contract for municipalities or private companies, title to the various properties is held exclusively by the municipality or private company.

[Table of Contents](#)**Item 3. Legal Proceedings.**

Information with respect to this item may be found under the subheading "Commitments and Contingencies" in Note 14 to the consolidated Financial Statements in Item 8, which is incorporated herein by reference.

Item 4. Mine Safety Disclosures.

Not applicable.

PART II**Item 5. Market for Registrant's Equity, Related Stockholder Matters and Issuer Purchases of Equity Securities.**

Our common stock is traded on the New York Stock Exchange under the symbol "CWT." At December 31, 2017, there were 48,012,432 common shares outstanding. There were 1,934 common stockholders of record as of February 12, 2018.

During 2017, we paid a cash dividend of \$0.7200 per common share, or \$0.1800 per quarter. During 2016, we paid a cash dividend of \$0.6900 per common share, or \$0.1725 per quarter. On January 31, 2018, our Board of Directors declared a quarterly cash dividend of \$0.1875 per common share payable on February 23, 2018, to stockholders of record on February 12, 2018. This represents our 51st consecutive year of increasing the annual dividend and marks the 292nd consecutive quarterly dividend.

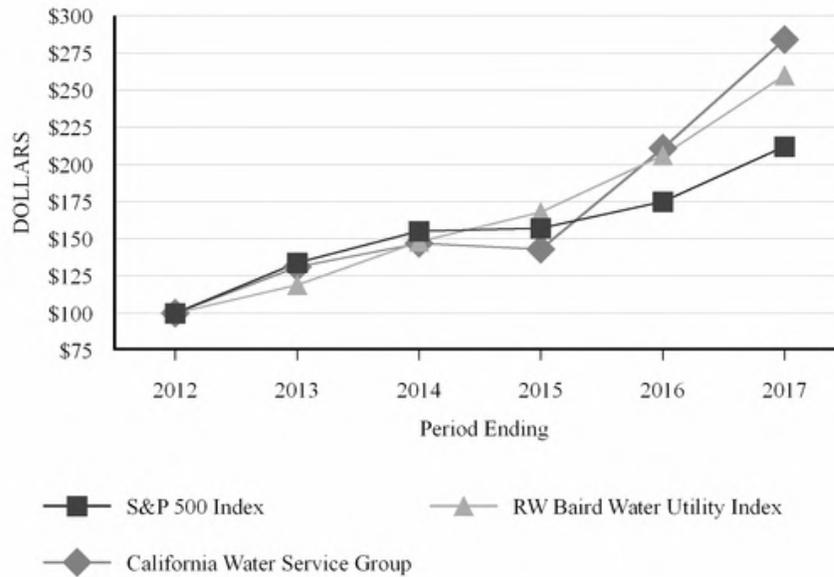

We presently intend to pay quarterly cash dividends in the future consistent with past practices, subject to our earnings and financial condition, restrictions set forth in our debt instruments, regulatory requirements and such other factors as our Board of Directors may deem relevant.

During 2017 and 2016, the common stock market price range and dividends per share for each quarter were as follows:

| 2017 | First | Second | Third | Fourth |
|---|--------------|---------------|--------------|---------------|
| Common stock market price range: | | | | |
| High | \$ 37.60 | \$ 39.40 | \$ 39.65 | \$ 46.15 |
| Low | 32.45 | 32.75 | 36.30 | 38.15 |
| Dividends paid per common share | 0.1800 | 0.1800 | 0.1800 | 0.1800 |
| 2016 | First | Second | Third | Fourth |
| Common stock market price range: | | | | |
| High | \$ 27.33 | \$ 34.95 | \$ 35.62 | \$ 36.85 |
| Low | 22.48 | 26.22 | 29.93 | 29.25 |
| Dividends paid per common share | 0.1725 | 0.1725 | 0.1725 | 0.1725 |

Five-Year Performance Graph

The following performance graph compares the changes in the cumulative shareholder return on California Water Service Group's common stock with the cumulative total return on the Robert W. Baird Water Utility Index and the Standard & Poor's 500 Index during the last five years ended December 31, 2017. The comparison assumes \$100 was invested on December 31, 2012, in California Water Service Group's common stock and in each of the forgoing indices and assumes reinvestment of dividends.

[Table of Contents](#)**Performance Graph Data**

The following descriptive data is supplied in accordance with Rule 304(d) of Regulations S-T:

| | 2012 | 2013 | 2014 | 2015 | 2016 | 2017 |
|---------------------------------------|------|------|------|------|------|------|
| California Water Service Group | 100 | 131 | 147 | 143 | 211 | 284 |
| S&P 500 | 100 | 134 | 155 | 157 | 175 | 212 |
| RW Baird Water Utility Index | 100 | 119 | 148 | 168 | 206 | 260 |

An initial \$100 investment in the common stock of California Water Service Group on December 31, 2012 including reinvestment of dividends would be worth \$284 at the end of the 5-year period ending December 31, 2017.

Item 6. Selected Financial Data.

The following selected consolidated financial data should be read in conjunction with our Consolidated Financial Statements and the Notes thereto and the information contained in Item 7, "Management's Discussion and Analysis of Financial Condition and Results of Operations."

Historical results are not necessarily indicative of future results.

[Table of Contents](#)

* The five year financial review for 2015, 2014, and 2013 reflect the retrospective adoption of ASU 2015-03, which requires that debt issuance costs related to a recognized debt liability be presented in the balance sheet as a direct deduction from the carrying amount of that debt liability, consistent with debt discounts. The Company adopted this guidance effective January 1, 2016.

** Includes customers of the City of Hawthorne and City of Commerce

[Table of Contents](#)**Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations.****Overview**

In 2017 and 2016, net income was \$67.2 million and \$48.7 million, respectively. Diluted earnings per share increased \$0.39 to \$1.40 or 38.6% from 2016 to 2017. The \$18.5 million increase in net income was primarily the result of increased rates adopted in the recent California GRC, a decrease in other operations expense, which included a GRC settlement agreement to write-off \$3.2 million associated with a canceled water supply project in Bakersfield in 2016, and a \$2.5 million increase in estimated unbilled revenue in 2017. These decreases were partially offset by increases in depreciation and amortization, employee wage, property tax, and net interest expenses. Net other income increased \$3.5 million to \$6.5 million in 2017, due primarily to the authorization of allowance for equity funds used during construction and unrealized gains on certain benefit plan investments.

In 2016 and 2015, net income was \$48.7 million and \$45.0 million, respectively. Diluted earnings per share increased \$0.07 to \$1.01 or 7.5% from 2015 to 2016. The \$3.7 million increase in net income was primarily a result of a \$2.8 million net resolution of several regulatory memorandum and balancing accounts in the Cal Water 2015 GRC settlement agreement, a \$1.9 million increase from the recovery of prior years' incremental drought program costs, and a \$1.7 million increase in estimated unbilled revenue in 2016. These increases were partially offset by increases in other operations expense, which included a GRC settlement agreement to write-off \$3.2 million associated with a canceled water supply project in Bakersfield, increases in depreciation and amortization, maintenance, property tax, employee wage, and net interest expenses. Net other income increased \$1.9 million to \$3.0 million in 2016, due primarily to the resolution of \$1.5 million of litigation proceeds in the GRC settlement agreement and unrealized gains on certain benefit plan investments.

We plan to continue to seek rate relief to recover our operating cost increases and receive reasonable returns on invested capital. We expect to fund our long-term capital needs through a combination of debt, common stock offerings, and cash flow from operations.

Critical Accounting Policies and Estimates

We maintain our accounting records in accordance with accounting principles generally accepted in the United States of America and as directed by the Commissions to which our operations are subject. The process of preparing financial statements requires the use of estimates on the part of management. The estimates used by management are based on historic experience and an understanding of current facts and circumstances. A summary of our significant accounting policies is listed in Note 2 of the Notes to Consolidated Financial Statements. The following sections describe those policies where the level of subjectivity, judgment, and variability of estimates could have a material impact on the financial condition, operating performance, and cash flows of the business.

Revenue Recognition

Revenue generally includes monthly cycle customer billings for regulated water and wastewater services at rates authorized by the Commissions (plus an estimate for water used between the customer's last meter reading and the end of the accounting period) and billings to certain non-regulated customers at rates authorized by contract with government agencies.

The Company's regulated water and waste water revenue requirements are authorized by the Commissions in the states in which we operate. The revenue requirements are intended to provide the Company a reasonable opportunity to recover its cost of service and earn a return on investments.

For metered customers, Cal Water recognizes revenue from rates which are designed and authorized by the CPUC. Under the WRAM, Cal Water records the adopted level of volumetric revenues, which would include recovery of cost of service and a return on investments as established by the CPUC for metered accounts. The adopted volumetric revenue considers the seasonality of consumption of water based upon historical averages. The variance between adopted volumetric revenues and actual billed volumetric revenues for metered accounts is recorded as a component of revenue with an offsetting entry to a regulatory asset or liability balancing account (tracked individually for each Cal Water district) subject to certain criteria under the accounting for regulated operations. The variance amount represents amounts that will be billed or refunded to customers in the future. In addition to volumetric revenues, the revenue requirements approved by the CPUC include service charges, flat rate charges, and other items not subject to the WRAM.

Cost-recovery rates are designed to permit full recovery of certain costs allowed to be recovered by the Commissions. Cost-recovery rates such as the MCBA provides for recovery of adopted expense levels for purchased water, purchased power and pump taxes, as established by the CPUC. In addition, cost-recovery rates include recovery of cost related to water conservation programs and certain other operating expenses adopted by the CPUC. Variances (which include the effects of changes in both rate and volume for the MCBA) between adopted and actual costs are recorded as a component of revenue, as the amount of such variances will

[Table of Contents](#)

be recovered from or refunded to our customers at a later date. Cost-recovery expenses are generally recognized when the expenses are incurred with no markup for return or profit.

The balances in the WRAM and MCBA assets and liabilities accounts will fluctuate on a monthly basis depending upon the variance between adopted and actual results. The recovery or refund of the WRAM is netted against the MCBA over- or under-recovery for the corresponding district and the deferred net balances are interest bearing at the current 90-day commercial paper rate. At the end of the calendar year, Cal Water files with the CPUC to refund or collect the balance in the accounts. The majority of under-collected net WRAM and MCBA receivable balances are collected over 12 and 18 months. Cal Water defers any net WRAM and MCBA revenues and associated costs whenever the net receivable balances are estimated to be collected more than 24 months after the respective reporting period in which it was recorded. The deferred net WRAM and MCBA revenue and associated costs were determined using forecasts of customer consumption trends in future reporting periods and the timing of when the CPUC will authorize Cal Water's filings to recover unbilled balances. Deferred revenues and associated costs are recorded in the periods when the collection is within 24 months of the respective reporting period.

Customers' meter reads occur on various business days throughout the month. As a result, there are unmetered or unbilled customer usage each month. The estimated unbilled revenue for monthly unmetered customer usage is recorded using the number of unbilled days for that month and average daily customer billing rate for the previous month. The average daily customer billing rate for the previous month fluctuates depending on customer usage. Estimated unbilled revenue is not included in the WRAM until it is billed.

Flat rate customers are billed in advance at the beginning of the service period. The revenue is prorated so that the portion of revenue applicable to the current period is included in that period's revenue, with the balance recorded as unearned revenue on the balance sheet and recognized as revenue when earned in the subsequent accounting period. Our unearned revenue liability was \$0.7 million as of December 31, 2017 and was \$0.8 million as of December 31, 2016. This liability is included in "other accrued liabilities" on our consolidated balance sheets.

Regulated Utility Accounting

Because we operate almost exclusively in a regulated business, we are subject to the accounting standards for regulated utilities. The Commissions in the states in which we operate establish rates that are designed to permit the recovery of the cost of service and a return on investment. We capitalize and record regulatory assets for costs that would otherwise be charged to expense if it is probable that the incurred costs will be recovered in future rates. Regulatory assets are amortized over the future periods that the costs are expected to be recovered. If costs expected to be incurred in the future are currently being recovered through rates, we record those expected future costs as regulatory liabilities. In addition, we record regulatory liabilities when the Commissions require a refund to be made to our customers over future periods.

Determining probability requires significant judgment by management and includes, but is not limited to, consideration of testimony presented in regulatory hearings, proposed regulatory decisions, final regulatory orders, and the strength or status of applications for rehearing or state court appeals.

If we determine that a portion of our assets used in utility operations is not recoverable in customer rates, we would be required to recognize the loss of the assets disallowed.

Income Taxes

We account for income taxes using the asset and liability method. Deferred tax assets and liabilities are recognized for future tax consequences attributable to differences between the financial statement carrying amounts of existing assets and liabilities and their respective tax basis. We measure deferred tax assets and liabilities at enacted tax rates expected to apply to taxable income in the years in which those temporary differences are expected to be recovered or settled. We recognize the effect on the deferred tax assets and liabilities of a change in tax rate in the period that includes the enactment date. We also assess the likelihood that deferred tax assets will be recovered in future taxable income and, to the extent recovery is not probable, a valuation allowance would be recorded. In management's view, a valuation allowance was not required as of December 31, 2017 and December 31, 2016.

We anticipate that future rate actions by the regulatory commissions will reflect revenue requirements for the tax effects of temporary differences recognized, which have previously been passed through to customers. The regulatory commissions have granted the Company permission to reflect the normalization of the tax benefits of the federal accelerated methods and available Investment Tax Credits (ITCs) for all assets placed in service after 1980. ITCs are deferred and amortized over the lives of the related properties for book purposes. The CPUC requires flow through accounting for state deferred taxes.

On December 22, 2017, the Tax Cuts and Jobs Act (TCJA) was enacted. Based on the accounting principles generally accepted in the United States of America, the Company is required to re-measure deferred income taxes to reflect the corporate

[Table of Contents](#)

income tax rate change from 35 percent to 21 percent as of the date of enactment. The re-measurement of the deferred income taxes resulted in an estimated excess deferred income tax liability of \$108.0 million as of December 31, 2017. The TCJA will lower customer rates due to lower income tax expense recoveries and the refund of excess deferred income tax. These lower customer rates will be partially offset by the TCJA's effect of increasing rate base in future years. The Company is working with state regulators on the refund process according to federal income tax normalization rules. There are aspects to the TCJA that contain technical matters that require management to interpret the legislation and make judgments until further guidance becomes available. As a result, changes in management's judgments could materially affect amounts recognized in the financial statements.

Pension and Postretirement Health Care Benefits

We incur costs associated with our pension and postretirement health care benefits plans. To measure the expense of these benefits, our management must estimate compensation increases, mortality rates, future health cost increases and discount rates used to value related liabilities and to determine appropriate funding. Different estimates used by our management could result in significant variances in the cost recognized for pension and postretirement health care benefit plans. The estimates used are based on historical experience, current facts, future expectations, and recommendations from independent advisors and actuaries. We use an investment advisor to provide advice in managing the plan's investments. We anticipate any increases in funding for the pension benefits plans will be recovered in future rate filings, thereby mitigating the financial impact. We believe it is probable that future costs will be recovered in future rates and therefore have recorded a regulatory asset in accordance with generally accepted accounting principles.

Changes to the pension benefits actuarial assumptions can significantly affect pension costs, regulatory assets, and liabilities. The following table reflects the sensitivity of pension amounts reported for the year ended December 31, 2017, to changes in actuarial assumptions:

| | Increase/(Decrease) in Pension Benefits Actuarial Assumption | Increase/(Decrease) in 2017 Net Periodic Benefit Cost | Increase/(Decrease) in Projected Benefit Obligation as of December 31, 2017 |
|---|--|---|--|
| Discount rate | (0.5)% | \$ 6,722 | \$ 70,501 |
| Long-term rate of return on plan assets | (0.5)% | 1,855 | — |
| Rate of compensation increases | (0.5)% | (2,831) | (18,590) |
| Cost of living adjustment | (0.5)% | (5,281) | (42,479) |
| Discount rate | 0.5 % | (5,904) | (61,150) |
| Long-term rate of return on plan assets | 0.5 % | (1,855) | — |
| Rate of compensation increases | 0.5 % | 3,078 | 19,929 |

[Table of Contents](#)**Results of Operations****Operating Revenue**

Operating revenue in 2017 was \$666.9 million, an increase of \$57.5 million, or 9.4%, over 2016. Operating revenue in 2016 was \$609.4 million, an increase of \$21.0 million, or 3.6%, over 2015. The sources of changes in operating revenue were:

| | 2017 | 2016 |
|--|---------------------|----------------|
| | Dollars in millions | |
| Net change due to rate changes, usage, and other (1) | \$ 65.0 | \$ 38.2 |
| MCBA revenue (2) | 1.2 | (14.3) |
| Other balancing account revenue (3) | (6.5) | (7.5) |
| Deferral of revenue (4) | (2.2) | 4.6 |
| Net change | <u>\$ 57.5</u> | <u>\$ 21.0</u> |

- (1) In 2017, the operating revenue increase is due to rate increases (see table in Rates and Regulation section below) and an increase of \$2.5 million in estimated unbilled revenue mostly due to a combination of higher average daily customer billing rates and an increase in unbilled days at the end of 2017 as compared to 2016. The operating revenue increase in 2016 resulted from rate increases and an increase of \$2.6 million in estimated unbilled revenue mostly due to an increase in unbilled days at the end of 2016 as compared to 2015.
- (2) The MCBA revenue increase in 2017 resulted from an increase in actual water production costs relative to adopted water production costs in 2017 as compared to 2016. The MCBA revenue decrease in 2016 resulted from a significant reduction in customer consumption in California caused by drought conditions. As required by the MCBA mechanism, the change in water production costs in California changes operating revenue in the same amount.
- (3) The other balancing accounts revenue consists of the pension, conservation and health care balancing account revenues. Pension and conservation balancing account revenues are the differences between actual expenses and adopted rate recovery. Health care balancing account revenue is 85% of the difference between actual health care expenses and adopted rate recovery. In 2017, the decrease in other balancing account revenue was due to a decrease in actual health care and conservation expenses relative to adopted in 2017, which was partially offset by an increase in actual pension expenses relative to adopted in 2017. In 2016, the decrease in revenue was due to a decrease in pension expense and a decrease in health care expenses relative to adopted amounts.
- (4) The deferral of revenue consists of amounts that are expected to be collected from customers beyond 24 months following the end of the accounting period in which these revenues were recorded. In 2017, the deferral increased in 2017 as compared to 2016 due to an increase in the balancing account revenue expected to be collected beyond 24 months. In 2016, the balancing account revenue expected to be collected beyond 24 months decreased as a result of drought surcharges.

Water Production Expenses

Water production expenses, which consist of purchased water, purchased power, and pump taxes, comprise the largest segment of total operating expenses. Water production costs accounted for 42.3% and 41.3%, of total operating costs in 2017 and 2016, respectively. The rates charged for wholesale water supplies, electricity, and pump taxes are established by various public agencies. As such, these rates are beyond our control.

The table below provides the change in water production expenses during the past 2 years:

| | 2017 | | | 2016 | | |
|---------------------------------|---------------------|----------------|-------------|-----------------|----------------|--------------|
| | Amount | Change | % Change | Amount | Change | % Change |
| | Dollars in millions | | | | | |
| Purchased water | \$ 199.1 | \$ 17.6 | 9.7% | \$ 181.5 | \$ 13.0 | 7.7 % |
| Purchased power | 28.9 | 1.7 | 6.2% | 27.2 | (0.7) | (2.5)% |
| Pump taxes | 13.9 | 2.6 | 23.2% | 11.3 | (0.2) | (1.7)% |
| Total water production expenses | <u>\$ 241.9</u> | <u>\$ 21.9</u> | <u>9.9%</u> | <u>\$ 220.0</u> | <u>\$ 12.1</u> | <u>5.8 %</u> |

[Table of Contents](#)

The principal factors affecting water production expenses are the quantity, price and source of the water. Generally, water pumped from wells costs less than water purchased from wholesale suppliers.

The table below provides the amounts, percentage change, and source mix for the respective years:

| | 2017 | | 2016 | | 2015 | |
|--------------------------|---------|------------|--------|------------|---------|------------|
| | MG | % of Total | MG | % of Total | MG | % of Total |
| Millions of gallons (MG) | | | | | | |
| Source: | | | | | | |
| Wells | 48,729 | 46.4% | 46,239 | 46.6% | 48,201 | 48.7% |
| % change from prior year | 5.4% | | (4.1)% | | (16.7)% | |
| Purchased | 51,131 | 48.7% | 48,154 | 48.6% | 47,486 | 48% |
| % change from prior year | 6.2% | | 1.4% | | (15.9)% | |
| Surface | 5,126 | 4.9% | 4,703 | 4.8% | 3,212 | 3.3% |
| % change from prior year | 9.0% | | 46.4% | | (19.3)% | |
| Total | 104,986 | 100.0% | 99,096 | 100.0% | 98,899 | 100% |
| % change from prior year | 6.0% | | 0.2% | | (16.4)% | |

Purchased water expenses are affected by changes in quantities purchased, supplier prices, and cost differences between wholesale suppliers. The MCBA mechanism is designed to recover all incurred purchased water expenses.

For 2017, the \$17.6 million increase in purchased water expenses is due to a 6.2% increase in purchased quantities and an overall blended wholesale water rates increase of 3.3% in 2017.

For 2016, the \$13.0 million increase in purchased water expenses is due to a 1.4% increase in purchased quantities and an overall blended wholesale water rates increase of 6.2% in 2016. Purchased water expenses for 2016 was partially offset by lease water rights credits of \$0.4 million.

Purchased power expenses are affected by the quantity of water pumped from wells and moved through the distribution system, rates charged by electric utility companies, and rate structures applied to usage during peak and non-peak times of the day or season. In 2017, purchased power expenses increased \$1.7 million, or 6.2%, mainly due to 5.4% increase in well water production. In 2016, purchased power expenses decreased \$0.7 million, or 2.5%, mainly due to 4.1% decrease in well water production.

Changes in climate change regulations could increase the cost of purchased power expenses which in turn would result in an increase in the rates our power suppliers charge us. Any change in pricing of our purchased power expenses in California would be recovered from our customers through the MCBA mechanism. Any change in power costs in other states would be requested to be recovered by the customers in those states. The impact of such legislation, is dependent upon the enacted date, the factors that impact our suppliers cost structure, and their ability to pass the costs to us in their approved tariffs. These items are not known at this time.

Administrative and General Expenses
